Re: UG-250610 – General Rate Increase; Tariff WN U-6, Natural Gas Service

Dear Mr. Killip:

Pursuant to RCW 80.28.050 and 80.28.060 and in accordance with WAC 480-07-510, Northwest Natural Gas Company, dba NW Natural ("NW Natural" or the "Company"), files herewith revisions to its Tariff WN U-6 to apply a general rate increase. In compliance with RCW 80.28.425(1), the Company is proposing a multi-year rate plan, which would begin with new rates effective August 1, 2026, and include rate increases occurring on August 1, 2027, and August 1, 2028.

The following proposed Tariff revisions associated with Year One of the multi-year rate plan listed in the table below have an issue date of August 29, 2025, and are stated to become effective with service on and after September 30, 2025. However, the Company requests that the tariffs be suspended with an effective date of August 1, 2026. NW Natural agrees to waive a suspension hearing and requests that the Commission immediately issue an order suspending the filed tariff revisions included in this filing and promptly set the matter for hearing, including the establishment of a prehearing conference, at the earliest possible date in accordance with WAC 480-07-440(1)(a).

Rate Year One Tariff Sheets:

TABLE OF TARIFF SHEET REVISIONS – Rate Year One		
PROPOSED	**CANCELS**	**TITLE**
Thirty-Sixth Revision of Sheet 101.1	Thirty-Fifth Revision of Sheet 101.1	Schedule 1 "General Sales Service"
Thirty-Seventh Revision of Sheet 102.1	Thirty-Sixth Revision of Sheet 102.1	Schedule 2 "Residential Sales Service"
Twenty-Fourth Revision of Sheet 103.3	Twenty-Third Revision of Sheet 103.3	Schedule 3 "Basic Firm Sales Service – Non-Residential (continued)"

Second Revision of Sheet 238.1	First Revision of Sheet 238.1	Schedule 238 "Adjustments to Rates for Provisional Capital Adjustment"

TABLE OF TARIFF SHEET REVISIONS – Rate Year Three		
PROPOSED	**CANCELS**	**TITLE**
Original Sheet 239.1	N/A	Schedule 239 "Temporary Adjustments to Rates for TSA Capital and Cost of Service Cost Recovery"

NW Natural is proposing to establish new rate adjustments of Schedule 235, Schedule 236, Schedule 237, Schedule 238, and Schedule 239, which are discussed in the Direct Testimony of Kyle T. Walker in Exh. KTW-1T.

NW Natural encloses all proposed tariff sheets formatted with the coding required by WAC 480-80-105 and in legislative format in accordance with WAC 480-07-510(2).

Purpose of Filing

NW Natural seeks Commission authorization to increase its rates and charges for its natural gas service in the state of Washington. For Year One of the multi-year rate plan in this filing, the Company proposes an increase in revenues from base rates by $25.6 million, which would result in an approximate 22.8 percent increase to overall base rates effective August 1, 2026. For Year Two of the proposed multi-year rate plan, NW Natural is proposing an increase of $8.6 million, or 6.2 percent, effective August 1, 2027. For Year Three of the proposed multi-year rate plan, NW Natural is proposing an increase of $8.3 million, or 5.7 percent, effective August 1, 2028.

The Company's Year One request is based on a proposed rate of return of 7.505 percent, reflecting a proposed return on equity of 10.1 percent and capital structure comprised of 51 percent common equity, 48 percent long-term debt, and 1 percent short-term debt. The full impact of the filing is described in greater detail in the Summary Document included with this filing in accordance with WAC 480-07-510(5) as Attachment A.

The tables below incorporate the impact of three deferrals that are proposed for recovery as part of this proceeding. The direct pre-filed testimony of Kyle T. Walker, Exh. KTW-1T, describe these deferrals and proposals for recovery. The net impact of the increase to base rates and the proposed offsetting measures is an overall increase to rates of $25.9 million, or 23.1 percent, in Year One, $8.6 million, or 6.2 percent, in Year Two, and $8.9 million, or 6.1 percent, in Year Three.

Effect on Customers

As proposed, this general rate case would increase the Company's sales service class customer rates for Year One of the multi-year rate plan, effective August 1, 2026, as follows:

Class	Rate Schedule*	Change in Monthly Customer Charge	Average Monthly Bill Change ($)	Average Monthly Bill Change (%) Existing Customers	Average Monthly Bill Change (%) New Customers
Residential	Schedule 1	$2.50	$7.37	26.3%	24.6%
Residential	Schedule 2	$0.00	$15.72	21.8%	19.7%
Commercial	Schedule 1	$3.00	$24.07	25.9%	24.5%
Commercial	Schedule 3	$0.00	$74.46	23.0%	20.7%
Residential/ Commercial	Schedule 27	$0.00	$21.47	37.1%	37.1%
Commercial Firm Sales	Schedule 41	$0.00	$679.15	21.1%	18.2%
Commercial Interruptible Sales	Schedule 41	n/a	n/a	n/a	n/a
Commercial Firm Sales	Schedule 42	$0.00	$2,584.20	21.2%	14.9%
Commercial Interruptible Sales	Schedule 42	$0.00	$3,310.06	14.2%	11.6%
Industrial Firm Sales	Schedule 41	$0.00	$490.10	14.5%	12.3%
Industrial Interruptible Sales	Schedule 41	n/a	n/a	n/a	n/a
Industrial Firm Sales	Schedule 42	$0.00	$1,109.08	18.3%	11.1%
Industrial Interruptible Sales	Schedule 42	$0.00	$1,213.36	14.7%	9.9%

As proposed, this general rate case would increase the Company's customer rates for Year Two of the multi-year rate plan, effective August 1, 2027, as follows:

Class	Rate Schedule*	Change in Monthly Customer Charge	Average Monthly Bill Change ($)	Average Monthly Bill Change (%) Existing Customers	Average Monthly Bill Change (%) New Customers
Residential	Schedule 1	$2.00	$2.39	6.8%	6.4%
Residential	Schedule 2	$2.00	$4.56	5.2%	4.8%
Commercial	Schedule 1	$0.00	$7.52	6.4%	6.1%
Commercial	Schedule 3	$0.00	$22.95	5.8%	5.3%
Residential/ Commercial	Schedule 27	$0.00	$4.31	5.4%	5.4%
Commercial Firm Sales	Schedule 41	$0.00	$225.49	5.8%	5.1%
Commercial Interruptible Sales	Schedule 41	n/a	n/a	n/a	n/a
Commercial Firm Sales	Schedule 42	$0.00	$860.90	5.8%	4.3%
Commercial Interruptible Sales	Schedule 42	$0.00	$904.53	3.4%	2.8%
Industrial Firm Sales	Schedule 41	$0.00	$198.26	5.1%	5.1%
Industrial Interruptible Sales	Schedule 41	n/a	n/a	n/a	n/a
Industrial Firm Sales	Schedule 42	$0.00	$449.42	6.3%	4.0%
Industrial Interruptible Sales	Schedule 42	$0.00	$638.81	6.7%	4.8%

As proposed, this general rate case would increase the Company's customer rates for Year Three of the multi-year rate plan, effective August 1, 2028, as follows:

Class	Rate Schedule*	Change in Monthly Customer Charge	Average Monthly Bill Change ($)	Average Monthly Bill Change (%) Existing Customers	Average Monthly Bill Change (%) New Customers
Residential	Schedule 1	$0.00	$2.40	6.3%	6.1%
Residential	Schedule 2	$0.00	$4.62	5.0%	4.6%
Commercial	Schedule 1	$0.00	$8.03	6.5%	6.2%
Commercial	Schedule 3	$0.00	$24.25	5.7%	5.3%
Residential/ Commercial	Schedule 27	$0.00	$4.55	5.4%	5.4%
Commercial Firm Sales	Schedule 41	$0.00	$239.65	5.8%	5.2%
Commercial Interruptible Sales	Schedule 41	n/a	n/a	n/a	n/a
Commercial Firm Sales	Schedule 42	$0.00	$901.74	5.8%	4.3%
Commercial Interruptible Sales	Schedule 42	$0.00	$1,000.64	3.6%	3.1%
Industrial Firm Sales	Schedule 41	$0.00	$202.82	5.0%	4.3%
Industrial Interruptible Sales	Schedule 41	n/a	n/a	n/a	n/a
Industrial Firm Sales	Schedule 42	$0.00	$451.76	5.9%	3.9%
Industrial Interruptible Sales	Schedule 42	$0.00	$519.00	5.1%	3.7%

*Schedule 41 and 42 sales customers may choose demand charges at a volumetric rate or based on MDDV. For convenience of presentation, demand charges are not included in the calculations for those schedules.
n/a represents schedules that currently do not have customers signed up for service.

Filing Support/Requirements

In support of this filing, and in compliance with WAC 480-07-510(1), the Company submits the prepared testimony and exhibits of:

Exhibit	Witness	Subject Matter
Exh. KAR-ZDK-1T	Kimberly A. Rush and Zachary D. Kravitz	Policy
Exh. CJT-1T	Cecelia J. Tanaka	Equity
Exh. KTW-1T	Kyle T. Walker	Multi-Year Rate Plan and Revenue Requirements
Exh. NCS-1T	Natasha C. Siores	Performance-Based Ratemaking Metrics
Exh. CAB-1T	Corey A. Beck	Language Access Approach
Exh. BJW-1CT	Brody J. Wilson	Cost of Capital
Exh. JEN-1T	Jennifer E. Nelson	Rate of Return on Equity
Exh. JOM-1T	Jorge O. Moncayo	Capital Expenditures: Budgeting/Forecasting, Management Approval, and Project Lifecycles
Exh. DBK-SSJ-1T	Daniel B. Kizer and Scott S. Johnson	Distribution System and Storage Facility Projects
Exh. WKP-1T	Wayne K. Pipes	Facilities
Exh. BEF-1CT	Brian E. Fellon	Information Technology & Services
Exh. BEF-23HCT	Brian E. Fellon	Transportation Security Administration Projects
Exh. JSK-1T	Joe S. Karney	Meter Modernization
Exh. MBR-1CT	Melinda B. Rogers	Compensation & Benefits
Exh. TFD-1CT	Tobin F. Davilla	Operations & Maintenance Expense
Exh. JJS-1T	John J. Spanos	Depreciation
Exh. HJB-1CT	Holly J. Braun	Thermal Energy Networks
Exh. RJW-1T	Robert J. Wyman	Embedded Cost of Service Model and Rate Design/Spread

Enclosed with this filing are:

- Attachment A – Summary Document required under WAC 480-07-510(5),
- Attachment B – Additional Documents required under WAC 480-07-510(7),
- Attachment C – Listing of Electronic Files in compliance with WAC 480-07-140(6)(b), and
- Attachment D – As a courtesy, the Company also includes a spreadsheet that provides Commission Staff's "Audit Guide – Initial Filing Assessment for Electric and Natural Gas Companies" requirements, and NW Natural's explanation of how or where the requirements were met.
- Attachment E – In compliance with Stipulating Condition 25e in Order 01 from Docket UG-170094, NW Natural includes its Master Services Agreement. Minor housekeeping changes have been made to Addendum 2 of the Master Services Agreement to update the List of

Services for completeness. There have been no changes to the agreement itself since it was last filed with the Commission, in Docket UG-200994 on May 19, 2021.

In accordance with WAC 480-07-510, all documents have been electronically filed consistent with the requirements in WAC 480-07-140, with the exception of highly confidential files withheld per WAC 480-07-160(6)(f). One complete copy of all documentation has also been served on Public Counsel. The summary document (Attachment A) required by WAC 480-07-510(5) has been served to the persons listed on the Certificate of Service attached to this letter.

Electronic copies of supporting workpapers will be provided to Commission Staff with a copy to Public Counsel within five business days of the date of this filing, in accordance with the provisions of WAC 480-07-510(4). The Company has included its cost of service study in accordance with WAC 480-85-040 with the testimony and exhibits of Robert J. Wyman; the cost of service study results are included in Exh. RJW-12. The Company will provide five paper copies of the Company's testimony and exhibits supporting this general rate case filing on or before September 2, 2025.

In compliance with WAC 480-07-510(3)(g), the Company states that there are no additional material affiliate transactions to report impacting the test year that were not otherwise reported in the Company's 2024 Affiliated Interest Report. The Company's 2024 Affiliated Interest Report, docketed as UG-250305, was filed on April 30, 2025, with minor revisions filed June 4, 2025.

Confidentiality Protections and Motion for Protective Order

NW Natural has marked certain pages "**SHADED INFORMATION IS DESIGNATED AS CONFIDENTIAL PER WAC 480-07-160.**" These documents are currently protected from any further disclosure by the Commission or the Office of the Attorney General, including their outside experts, **pursuant to RCW 80.04.095 and WAC 480-07-160**. Please note that the Company has also simultaneously-filed a motion for amended protective order with highly confidential provisions.

The Company therefore requests that the documents contained in the envelopes identified with the cover page marked "**SHADED INFORMATION IS DESIGNATED AS CONFIDENTIAL PER WAC 480-07-160**" as well as the files marked "Shaded Information is Designated as Confidential per WAC 480-07-160" be treated as confidential under the provisions of WAC 480-07-160, as they each contain sensitive commercial information. In accordance with WAC 480-07-160(5)(c), the Company has enclosed redacted versions of the documents containing confidential information along with the non-confidential documents in its filing, and has placed unredacted versions of the documents containing confidential information in separate envelopes with corresponding "**SHADED INFORMATION IS DESIGNATED AS CONFIDENTIAL PER WAC 480-07-160**" labels on the envelopes. Each page of the unredacted version containing confidential information has been printed on yellow paper.

Public Notice and Suspension

NW Natural agrees that following suspension of this filing, it will provide notice pursuant to WAC 480-90-197 once the public hearing dates have been selected by the Commission. Accordingly, the notice provisions of WAC 480-90-194 are not required at this time for this filing.

The Company stands ready to respond to any requests for data and information by telephone, or in writing, and to schedule any audit time that may be necessary. Please send any requests to the contact information shown below.

As requested by WAC 480-80-103(4)(a), I certify that I have authority to issue tariff revisions on behalf of NW Natural.

In accordance with WAC 480-90-193, a copy of the filing is available for public inspection at the Company's main office in Portland, Oregon and on its website at www.nwnatural.com.

Re: UG-250610 – General Rate Increase; Tariff WN U-6, Natural Gas Service

Dear Mr. Killip:

In compliance with WAC 480-07-510(5), Northwest Natural Gas Company, dba NW Natural ("NW Natural" or the "Company"), is serving you with the enclosed Summary Document (Attachment A) of the Company's general rate case filed in Docket UG-250610.

NW Natural's prefiled testimony and exhibits, along with accompanying workpapers, are available from the Company on request. Prefiled testimony and exhibits are also available at the Washington Utilities and Transportation website under docket UG-250610.

Sincerely,

/s/ Zachary D. Kravitz

Summary Document Required by WAC 480-07-510(5)

August 29, 2025

NW NATURAL
Summary of Requested Rate Increase
GAS Service
Based on Rates Currently in Effect
Washington Jurisdiction
Filed August 29th, 2025

As required in WAC 480-07-510(5)(a):

i) The date and amount of the latest prior general rate increase authorized by the Commission, and revenue realized from that authorized increase in the test period, based on the company's test period units of revenue.

Effective Date	UG-200994	11/01/2021
Amount (thousands)		$ 5,000
Revenue realized (thousands)		$ 5,488

Effective Date	UG-200994	11/01/2022
Amount (thousands)		$ 3,000
Revenue realized (thousands)		$ 3,296

ii) Total general business revenues at present rates and at requested rates.

Present Rates (thousands)	$ 112,036
Requested Rates (thousands) - Year 1	$ 137,887
Requested Rates (thousands) - Year 2	$ 146,185
Requested Rates (thousands) - Year 3	$ 155,125

iii) Requested revenue change in percentage, in total and by major customer class.

Year 1 Rate Period

	Base Tariff Revenue	Billed Revenue
Residential	39.1%	23.3%
Commercial	43.1%	23.4%
Industrial Firm Sales	28.2%	12.3%
Interruptible Sales	37.3%	12.2%
Transportation	27.2%	27.6%
Overall	39.5%	23.07%

Margin Increase %

Year 2 Rate Period

Requested revenue change in percentage, in total and by major customer class.	Base Tariff Revenue	Billed Revenue
Residential	9.5%	6.3%
Commercial	12.0%	7.6%
Industrial Firm Sales	9.5%	4.7%
Interruptible Sales	7.0%	2.8%
Transportation	9.5%	9.5%
Overall	9.5%	6.2%

Update to Revenue not margin

Year 3 Rate Period

Requested revenue change in percentage, in total and by major customer class.	Base Tariff Revenue	Billed Revenue
Residential	8.3%	6.1%
Commercial	10.8%	7.6%
Industrial Firm Sales	8.6%	4.7%
Interruptible Sales	6.3%	2.8%
Transportation	8.6%	9.2%
Overall	8.4%	6.1%

iv) Requested revenue change in thousands of dollars, in total and by major customer class.

	Year 1	Year 2	Year 3
Residential	$ 17,414	$ 5,834	$ 6,010
Commercial	$ 7,350	$ 2,294	$ 2,440
Industrial Firm Sales	$ 307	$ 130	$ 137
Interruptible Sales	$ 93	$ 32	$ 34
Transportation	$ 686	$ 301	$ 319
Total	$ 25,851	$ 8,591	$ 8,940

v) Requested rate change in dollars per month, per average customer, by customer class.

	Billing Rates Year 1	Billing Rates Year 2	Billing Rates Year 3
Residential	$15.66	$4.54	$4.59
Commercial	$295.34	$94.36	$98.60
Industrial Firm Sales	$791.85	$316.25	$318.68
Interruptible Sales	$2,935.85	$633.96	$672.60
Transportation	$2,569.56	$938.28	$951.87

vi) Most current customer count by major customer class. (1)

Residential	91,114
Commercial	7,377
Industrial Firm Sales	53
Interruptible Sales	3
Transportation	29
Total	98,576

(1) as of June 30, 2025

vii) Current authorized overall rate of return and authorized rate of return on common equity.

Overall rate of return	6.81%
Rate of return on common equity	9.40%

viii) Actual rate of return and actual rate of return on common equity for the test

Actual rate of return	5.55%
Actual Rate of return on common equity for test period	6.41%

ix) Requested overall rate of return and requested rate of return on common equity, and the method or methods used to calculate rate of return on common equity.

	Year 1	Year 2	Year 3
Overall rate of return	7.51%	7.62%	7.66%
Rate of return on common equity	10.10%	10.20%	10.20%

The methodologies utilized in the derivation of the rate of return on common equity were discounted cash flow analyses (single and multi-stage), risk premium model analysis, capital asset pricing model (CAPM) analysis, and Empirical CAPM analysis.

x) Requested capital structure.

Long Term Debt	48.00%
Short-Term Debt	1.00%
Common Equity	51.00%
Total	100.00%

xi) Requested total net operating income.

	Year 1	Year 2	Year 3
Net operating income (thousands)	$ 25,649	$ 29,076	$ 32,381

xii) Requested total rate base and method of calculation, or equivalent.

	Year 1	Year 2	Year 2
Rate base (thousands)	$ 341,761	$ 381,433	$ 422,679

Method of calculation is end of period basis.

xiii) Requested revenue effect of attrition allowance, if any requested.

No attrition allowance requested	$ -

Additional Documents Required by WAC 480-07-510(7)

August 29, 2025

Per WAC 480-07-510(7). Additional documents. The company's initial filing must include the following documents or an internet URL for each of these documents:

(a) The company's most recent annual report to shareholders, if any, and any subsequent quarterly reports to shareholders:

NW Natural's 2024 Annual Report:
https://ir.nwnaturalholdings.com/financials/annual-reports/default.aspx

(b) The company's most recent FERC Form 1 and FERC Form 2 for electric and natural gas companies;

NW Natural does not file a FERC Form 1.

NW Natural's 2024 FERC Form 2:
https://www.utc.wa.gov/sites/default/files/2025-05/02-NEW-NWN-2024-ARpt-04-29-25.pdf

Supplemental Filing:
https://www.utc.wa.gov/sites/default/files/2025-05/02-NEW-NWN-2024-ARpt-WA%20Supplemental%20-%2004-29-25.pdf

(c) The company's Form 10K's, Form 10Q's, any prospectuses for any issuances of securities, and quarterly reports to stockholders, if any, for the most recent two years prior to the rate change request:

NW Natural's 2024 Form 10-K:

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION Complainant, v. NORTHWEST NATURAL GAS COMPANY, Respondent.	DOCKET UG-250610

NORTHWEST NATURAL GAS COMPANY

Attachment D

Staff Audit Guide – Initial Filing Assessment for Electric and Natural Gas Companies Matrix

August 29, 2025

Commission Staff's General Rate Case Audit Guide for Electric and Natural Gas Companies

1. Transmittal Letter (also referred to as a "Cover Letter")
Rule: WAC 480-80-104
A utility must submit a transmittal letter with all tariff and contract filings. The transmittal letter must:

		NW Natural's Compliance Demonstration
(✓)	a. Identify all new tariffs or contracts, or identify the tariff or contract changes;	Included in Cover Letter
(✓)	b. Explain in understandable terms why the tariff or contract filing is being submitted;	Included in Cover Letter
(✓)	c. Specify the changes requested in clear and concise terms and define any acronyms used;	Included in Cover Letter
(✓)	d. Refer to the commonly used name of the service, the advice number, if known, and the docket number, if applicable;	Service, Advice Number, and Docket Number included in table in Cover letter
(✓)	e. Include the advice number if the utility uses consecutively numbered advice letters;	Included Advice 25-03 on tariffs and Cover Letter information
(✓)	f. Describe the general effect of, and reasons for, tariff or contract filings involving only text changes;	Rate Change, not Text Change filing
(✓)	g. Describe which services are affected, and the dollar amount and percentage of increase or decrease if the filing is a rate change. If a combination of changes is filed (i.e., increases and decreases), each change should be described, as well as the net effect on company revenues; and	Included in Cover Letter and Attachment A
(✓)	h. If the utility does not include an authorizing signature on the tariff sheets, include a statement certifying that the submitting person has authority to issue tariff revisions on behalf of the utility.	Statement required by WAC 480-80-103(4)(a) included in Cover Letter

2. Acceptable Format
Rule: WAC 480-07-140(6)(a)

		NW Natural's Compliance Demonstration
(✓)	(i) All documents other than spreadsheets as described in (a)(ii) of this subsection and email correspondence or comments must be filed in searchable .pdf (adobe acrobat or comparable software) format and to the extent feasible should be saved or otherwise converted directly from the native format in which the document was created.	All files provided are searchable and include formulas
(✓)	(ii) Spreadsheets must include all formulas and may not include locked, password protected, or hidden cells or tabs, or any other restrictions that impair or hamper the commission's ability to review or modify the data in those cells.	All files provided are searchable and include formulas

Commission Staff's General Rate Case Audit Guide for Electric and Natural Gas Companies

3. File Naming Conventions
Rule: WAC 480-07-140(6)(b)

		NW Natural's Compliance Demonstration
(✓)	a. The docket number of the proceeding (except in the case of original submissions);	Docket Number is included in File Name (i.e., "250610-NWN-GRC-CLtr-08-29-25")
(✓)	b. Any confidentiality designation;	Included in File Name as appropriate - Confidential (C) and Highly Confidential (HC)
(✓)	c. The name of the document;	Included in File Name (i.e., "250610-NWN-GRC-CLtr-08-29-25")
(✓)	d. *[Missing from Staff's Form]*	N/A
(✓)	e. The name of the person or party on whose behalf the document is submitted;	Included in the File Names
(✓)	f. The last name of any witness sponsoring the document; and	Witness initals included in File Names per WAC 480-07-140(6)(b). List of witnesses, including full name with middle initial, provided in Cover Letter.
(✓)	g. The date the document is submitted.	Included in the File Names

4. Acceptable Organization
Rule: WAC 480-07-140(6)(c)
Except as provided in WAC 480-07-160(4)(c)(iv), - (5)(c)(iv), and (6)(c)(iv).

		NW Natural's Compliance Demonstration
(✓)	When submitting documents that include information designated as exempt, confidential, and/or highly confidential, all files required to meet a single deadline must be submitted at the same time and in the same message, if possible, or on the same disc or commonly used electronic storage medium.	All files provided through Box, upon coordiation with the WUTC Filing Center.

5. Confidential and Other Restricted Information
Rule: WAC 480-07-160

		NW Natural's Compliance Demonstration
(✓)	a. Designating information as exempt/confidential/highly confidential;	All Confidential information is provided in a confidential and redacted format, properly notated in file names, and on applicable pages or spreadsheets. Highly Confidential information is properly described and withheld pursuant to WAC 480-07-160(6)(f), and a complete unredacted and redacted version will be submitted as soon as practicable after the Commission enters a Protective Order in this proceeding
(✓)	b. Providing documents with information designated as exempt/confidential/highly confidential; and	
(✓)	c. Marking and submitting information designated as exempt/confidential/highly confidential.	

Commission Staff's General Rate Case Audit Guide for Electric and Natural Gas Companies

6. General Provision
Rule: WAC 480-07-510

		NW Natural's Compliance Demonstration
(✓)	The company and all parties to an adjudication in a general rate proceeding must file all required documents in electronic form consistent with the requirements in WAC 480-07-140 and by the next business day must file five paper copies of all testimony and exhibits unless the commission establishes a different number.	On Friday, August 29, 2025, the complete filing is being electronically filed with the WUTC. Five paper copies of the complete filing is scheduled for delivery to the WUTC on Tuesday, September 2, 2025. A complete unredacted and redacted version of Highly Confidential documents will be submitted as soon as practicable after the Commission enters a Protective Order in this proceeding

7. Testimony & Exhibits (T&E)
Rule: WAC 480-07-510(1)
The utility must provide an exhibit that includes:

		NW Natural's Compliance Demonstration
(✓)	a. Results-of-operations statement showing test year actual results;	See Walker Exhibits Exh.KTW-2 through Exh KTW-12
(✓)	b. Restating and pro forma adjustments in columnar format supporting its general rate request;	See Walker Exhibits Exh.KTW-2 through Exh KTW-12
(✓)	c. Each restating and pro forma adjustment and its effect on the results of operations and revenue requirement;	See Walker Exhibits Exh.KTW-2 through Exh KTW-12
(✓)	d. A written description (in the testimony) of each proposed restating and pro forma adjustment describing the reason, theory, and calculation of the adjustment.	See Walker Testimony Exh. KTW-1T

8. Tariff Sheets
Rule: WAC 480-07-510 (2)
The company must file a copy of:

		NW Natural's Compliance Demonstration
(✓)	a. The proposed new or revised tariff sheets in legislative format;	Provided with Cover Letter and Original Filing
(✓)	b. Any tariff sheets that are referenced by new or amended tariff sheets.	See the Cover Letter for complete list of tariff sheets included in this filing
(✓)	c. Changes to revised tariffs must be indicated by symbols or notations and consistent with the other requirements. (per WAC 480-80-105)	NW Natural has submitted coded tariff sheets consistent with WAC 480-80-105

Commission Staff's General Rate Case Audit Guide for Electric and Natural Gas Companies

9. Detailed Support for Proposals
Rule: WAC 480-07-510 (3)(a) – (3)(i)

		NW Natural's Compliance Demonstration
(✓)	a. The company must include in its initial T&E (testimony and exhibits), sufficient detail, calculations, information and descriptions necessary to meet its burden of proof.	NW Natural's direct case includes the testimony and supporting exhibits regarding 18 subjects supported by 19 witnesses. Workpapers will be provided within five business days.
(✓)	b. The company must include in T&E a detailed description of the development of any capital structure and rate of return (ROR) proposals.	See testimony and exhibits of Brody J. Wilson (Exh. BJW-1CT through BJW-7C) and Jennifer E. Nelson (Exh. JEN-1T through Exh. JEN-19)
(✓)	c. T&E must include a detailed portrayal of the restating and pro forma adjustments used to support its proposal or position (assumptions, etc.) T&E must include support for and calculations showing the derivation of each input number used in the detailed portrayal, as well as the derivation of all interstate and multiservice allocation factors. (See WAC 480-07-510(3)(c)(i) and WAC 480-07-510(3)(c)(ii) for definitions of restating and pro forma adjustments, respectively.)	See testimony and exhibits of Kyle T. Walker (Exh. KTW-1T through Exh. KTW-12). The allocation methodology is provided in Exh. KTW-3.
(✓)	d. The company must include in T&E a detailed portrayal of revenue from regulated sources, by source, during the test year and the changes that would result in those revenues if the commission approved the company's request, including an explanation of how the resulting changes were derived.	See testimony and exhibits of Kyle T. Walker (Exh. KTW-1T through Exh. KTW-12).
(✓)	e. The company must demonstrate in T&E why the company has not achieved its authorized ROR and what actions company has taken prior to and during the test year to improve its earnings in addition to its request for increased rates. If the company has not taken such action, the company must explain why it has not.	See testimony and exhibits of Kyle T. Walker (Exh. KTW-1T through Exh. KTW-12).
(✓)	f. T&E must include a representation of the company's actual rate base and results of operations during the test period, calculated in the same manner the commission used to calculate the revenue requirement in the final order in the company's most recent GRC.	See testimony and exhibits of Kyle T. Walker (Exh. KTW-1T through Exh. KTW-12) and Kimberly A. Rush and Zachary D. Kravitz (Exh.KAR-ZDK-1T)
(✓)	g. The company's T&E must supplement, as necessary, the annual affiliate and subsidiary transaction reports to include all such transactions during the test period. The company must identify all affiliate and subsidiary transactions that materially affect the proposed rates. The company must support the allocation method used to distribute common costs between regulated and nonregulated affiliated entities and the dollar amount of those costs.	Statement affirming no need to update annual affiliate and subsidiary transaction reports in this case in compliance with WAC 480-07-510(3)(g) included in Cover Letter.
(✓)	h. Electronic files must be fully functional and include all formulas and linked spreadsheet files. Electronic files that support exhibits must use logical file paths, as necessary, by witness and must use identifying file names consistent with the naming requirements in WAC 480-07-140.	NW Natural has complied with this requirement

Commission Staff's General Rate Case Audit Guide for Electric and Natural Gas Companies

(✓)	i. If T&E refer to a document including, but not limited to, a report, study, analysis, survey, article, or court or agency decision, the party's T & E must include that document except as provided below: (i) A party may include an official citation or internet Uniform Resource Locator (URL) to a commission order or to a court opinion or other state or federal agency decision; (ii) A party may include only the relevant excerpts of a voluminous document if the party also provides a publicly accessible internet URL; and (iii) A party is not required to file or distribute materials subject to third-party copyright protection.	NW Natural has complied with this requirement

10. Work Papers		**NW Natural's Compliance Demonstration**
(✓)	Rule: WAC 480-07-510 (4)(a) a. Within 5 business days, the company must provide copies of all supporting work papers of each witness and must comply with the requirements of this subsection.	NW Natural will provide workpapers within 5 business days.
(✓)	Rule : WAC 480-07-510 (4)(b) b. Work papers must be plainly identified and well organized, and must include an index. Work papers must be cross referenced and include a description of the cross-referencing methodology.	Workpapers will comply with these requirements and an index is included
(✓)	Rule : WAC 480-07-510 (4)(c) c. Any work papers provided to other parties must comply with requirements governing electronic documents and confidentiality and referenced documents.	Workpapers will comply with these requirements

Commission Staff's General Rate Case Audit Guide for Electric and Natural Gas Companies

11. Summary Document

Rule: WAC 480-07-510 (5)(a)		**NW Natural's Compliance Demonstration**
(✓)	a. The company must include in its initial filing a document that summarizes the information in this subsection on an annualized basis, if applicable, and must itemize revenues from any temporary, interim, periodic, or other non-continuing tariffs. (i) The date and amount of the last general rate change and the revenue the company realized from that change during the test period based on the company's test period units of sale; (ii) Total revenues the company is realizing at its present rates and the total revenues the company would realize at the requested rates; (iii) Requested revenue change in percentage, in total and by major customer class; (iv) Requested revenue change in dollars, in total and by major customer class; (v) The representative effect of the request in dollars for the average monthly use per customer, by customer class or other similar meaningful representation, i.e., dollars per month on residential customers by usage categories; (vi) Most current customer count, by major customer class; (vii) Current authorized overall ROR and authorized rate of return on common equity (ROE); (viii) Actual ROR and actual ROE for the test period; (ix) Requested overall ROR and requested ROE and the method or methods used to calculate the requested rates of return; (x) Requested capital structure; (xi) Requested net operating income; (xii) Requested rate base and method of calculation or equivalent; and (xiii) Revenue effect of any requested attrition allowance.	See Attachment A providing items required by WAC 480-07-510(5).

Cover Letter		**NW Natural's Compliance Demonstration**
(✓)	The company must enclose a cover letter with the summary document stating that the company's pre-filed testimony, exhibits, and work papers are available from the company on request, if the company is not serving them along with the summary document.	NW Natural provided a complete electronic copy of the entire filing, including Summary Document (Attachment A) to Public Counsel. The Company also served parties from its last general rate case with the Summary Document, including required cover letter.

12. Cost Studies (Cost of Service)

Rule: WAC 480-07-510 (6)		**NW Natural's Compliance Demonstration**
(✓)	a. The company must provide any cost studies it performed to prepare its filing.	Included in the Testimony and Exhibits of Robert J. Wyman Exh RJW-1T through RJW-19C. Exh. RJW-1T discussed previous cost studies and Exh. RJW-12 includes the WUTC's natural gas cost of service template. Cost studies are included in Exh. RJW-12 and Exh. RJW-13.
(✓)	b. The company must identify all cost studies conducted in the last five years for any of the company's services.	
(✓)	c. The company must describe the methodology used in all such cost studies. If the study is in the form of a model, the company must provide a copy of or reasonable access to the model	

Commission Staff's General Rate Case Audit Guide for Electric and Natural Gas Companies

13. Additional Documents
Rule: WAC 480-07-510 (7)
The company must file or provide URL for each of these:

		NW Natural's Compliance Demonstration
(✓)	a. Its most recent annual report to shareholders, if any, and any subsequent quarterly reports to shareholders;	See Attachment B for associated URLs
(✓)	b. The most recent FERC Form 1 and FERC Form 2;	See Attachment B for associated URLs
(✓)	c. The company's Form 10 Ks and Form 10 Qs, any prospectuses for any issuances of securities and quarterly reports to stockholders, if any, for the most recent two years prior to the rate change request.	See Attachment B for associated URLs

NORTHWEST NATURAL GAS COMPANY

Attachment E

Master Services Agreement, in Compliance with Stipulating Condition 25e in Order 01 from Docket UG-17009

August 29, 2025

MASTER SERVICES AGREEMENT

THIS MASTER SERVICES AGREEMENT (the "Agreement"), effective January 1, 2019, is between Northwest Natural Gas Company ("NW Natural"), its parent company, Northwest Natural Holding Company ("NW Natural Holdings"), and its affiliates and subsidiaries (together, the "Affiliates"). NW Natural and its Affiliates are "Affiliated Interests," as defined under ORS 757.015 and RCW 80.16.010.

RECITALS

A. NW Natural is an Oregon corporation that is a natural gas local distribution company that serves customers through separate facilities located in Oregon and southwestern Washington. NW Natural is a wholly owned subsidiary of NW Natural Holdings—a publicly held company traded on the New York Stock Exchange. A list of NW Natural's Affiliates is included in Addendum 1, which may be amended periodically. NW Natural and its Affiliates, as identified in Addendum 1, are referred to herein as "Party" or collectively as "Parties". NW Natural is subject to regulation by the Oregon Public Utility Commission ("OPUC") and Washington Utilities and Transportation Commission ("WUTC"), respectively, for its state-regulated gas distribution activities in such states, and by the OPUC and the Federal Energy Regulatory Commission ("FERC") for its regulated intrastate and interstate gas storage activities. NW Natural is headquartered in Portland, Oregon.

B. Attached as Addendum 1 is a list of NW Natural's Affiliates. Except as otherwise noted on the Addendum, all of these Affiliates are legal entities separate and apart from NW Natural. Nothing in the Agreement is to be interpreted to the contrary.

C. NW Natural employs certain trained personnel capable of performing needed management, analytical, professional, and administrative services (which, together with the more detailed services specified on Addendum 2, are referred to herein as the "Services") in furtherance of the Affiliated Interests' operations.

D. NW Natural desires to make available to NW Natural's Affiliates such personnel and Services as the board of directors, officers or managers of those Parties shall reasonably request in the future, without detriment to NW Natural's utility functions.

E. NW Natural's Affiliates desire to make available to NW Natural such personnel and Services as the board of directors, officers or managers of NW Natural shall reasonably request in the future, without detriment to NW Natural's Affiliates' respective business functions.

THEREFORE, the Parties agree as follows:

1. **Services Provided by NW Natural**

Upon the request of the board of directors, officers, or managers of NW Natural, NW Natural shall furnish to its Affiliates the Services listed in Addendum 2 as requested, subject to applicable requirements of the cognizant utility commission(s), and given the terms and conditions as follows:

2. **Requests for Service**

All Services provided shall be mutually agreeable and based upon a written request for Services in a form substantially similar to that attached as Addendum 3 hereto ("Request for Services"), specifying the scope of Services. Changes in the Request for Services shall be agreed to in writing by the Parties.

3. **Basis of Charges**

3.1 Costs Included in State Utility Revenue Requirements. If the service cost or benefit is intended for inclusion in NW Natural's state operations revenue requirements, then:

a. All billing by NW Natural to an Affiliate shall be at the higher of cost or market, unless otherwise specified by the Parties and approved by the OPUC and/or, as appropriate, the WUTC.

b. All billings by an Affiliate to NW Natural shall be at the lower of cost or market, unless otherwise specified by the Parties and approved by the OPUC and/or the WUTC, or unless provided at an approved rate on file with the OPUC and/or the WUTC or the FERC.

c. All billings for Services rendered to NW Natural by an Affiliate shall meet the following three criteria: (1) they must be just and reasonable regulated utility expenses; (2) they must be for functions that NW Natural would perform as a stand-alone utility; and (3) they must not duplicate, but may augment/supplement, functions already performed by NW Natural.

3.2 Costs Defined. For the purpose of this Agreement, "costs" shall include both of the following:

a. All out-of-pocket expenses of the Party providing the Services incurred in connection with the provision of Services rendered, including salaries, labor costs and benefits and other payroll overhead costs; amounts paid for independent technical and professional Services; amounts paid to third-party contractors; and all administrative overhead expenses, including, but not limited to, space utilization, utilities, IT costs and other administrative costs. Labor costs shall be based on the number of hours worked by the employees multiplied by the average cost rate per hour applicable to those employees. The hourly rate shall be adjusted to

include all appropriate payroll overhead loadings (for vacation, benefits, taxes, etc.). In addition, the applicable Administrative overhead loading rate shall be applied to derive the fully loaded cost of employee time associated with Services provided. Materials, supplies, and non-labor vouchered items shall similarly be charged to the other Party on the basis of the full cost of the items supplied. Supporting documentation on the cost of non-labor items shall be available to the other Party to substantiate the charges billed. Non-labor costs shall not have an A&G loading rate applied.

b. A reasonable return on any investment in assets, equipment, or plant ("Assets") supporting the provision of Services in the following amounts:

(i) For Services provided by NW Natural, the return on Assets employed, if any, shall be no less than the rate case authorized rate of return on its investment serving its ratepayers; and

(ii) For Services provided by an Affiliate to NW Natural, the return on Assets employed, if any, shall be no more than the rate case authorized rate of return on its investment serving its ratepayers, if applicable.

4. **Method of Charging for Services**

4.1 Direct Assignment and Allocation Methods. Direct assignment of costs shall be the primary method for charging for Services according to the accounting procedures in NW Natural's Cost Allocation Manual, attached as Exhibit A. Exhibit A contains rules for determining and allocating any remaining costs associated with those Services that cannot be directly assigned to a user of a Service. The allocation methods set forth in Exhibit A shall be applied to allocate those costs that cannot be directly assigned.

4.2 Review of Affiliate Charges to NW Natural. At least annually, NW Natural shall review the Services supplied by the Affiliates under each of the Addenda executed. The

review shall include a determination that billing is consistent with the accounting and cost assignment procedures in Section 3 and Exhibit A.

5. **Invoicing**

a. As soon as practicable after the last day of each month, the provider of Services shall invoice the recipient of Services for expenses for the month concluded, computed pursuant to Sections 3 and 4 above.

b. All invoice charges shall be supported by documentation satisfactory to the recipient. Charges for Services shall be entered into the accounting records in the month following the period in which Services were rendered. However, if the invoice charges are less than $50,000 per Party, then invoice may be delayed until either (1) total charges are more than $50,000 per Party, or (2) quarterly, whichever comes first.

6. **Monitoring and Control**

The Inter-Company Services Coordinator ("Coordinator") is responsible for reviewing, monitoring and maintaining Services Requests that are active. The Coordinator ensures authorization of new Services Requests and that allocation factors are proper and accurate. Additionally, the Coordinator is responsible for coordinating the monthly billing process as described in Section 5 above.

7. **Billing Disputes**

Disputes on billings for Services shall be resolved through negotiations between the authorized representative(s) of the Affiliate, the Controller of NW Natural, and the Vice President(s) of the department at NW Natural responsible for providing or receiving Services, or their respective designee(s).

8. **Books and Records**

a. All transactions made under this Agreement shall be recorded by NW Natural in accordance with the Uniform System of Accounts prescribed by the regulatory authorities having jurisdiction over NW Natural.

b. Each Party shall have the right at all reasonable times to examine the books and records of the other for the purpose of verifying the cost, or the market value determination if applicable, of the Services performed by the other Party.

9. **Limitations on Service**

a. NW Natural shall diligently and competently render all Services reasonably requested by the Affiliates to the extent NW Natural can make available its resources without detriment to its utility functions.

b. The Affiliates shall diligently and competently render all Services reasonably requested by NW Natural to the extent those entities can make available their resources without detriment to their business functions, and to the extent that such Services to NW Natural are specified in the attached Addendum 2 to this Agreement.

c. NW Natural and its Affiliates shall coordinate and administer all Services being rendered under this Agreement in order that such Services shall be furnished as efficiently and economically as possible.

d. Except as provided in subsections 9.a. and b. above, neither NW Natural nor its Affiliates shall have priority over the other in obtaining Services under this Agreement.

10. **Limitation of Authority**

The Parties agree that no Party shall assume nor create any obligation on behalf of any other Party other than as specifically provided for in this Agreement. Each Party reserves to itself

the right to make commitments for loans, financing, mortgages, and other commitments necessary and proper for its corporate purposes.

11. **Inspection and Reporting**

a. All books, records, and other data in possession of the Parties relating to the provision of Services pursuant to this Agreement shall at all times, during normal business hours, be made available to or copies provided to any regulatory agency having jurisdiction when engaged in the performance of its lawful functions, except to the extent that such information is reasonably determined by any Party to be confidential in nature in which case any such information shall be submitted to any such regulatory agency under confidential treatment in accordance with the applicable laws and regulations governing such confidential treatment request.

b. Each Party shall timely furnish to each other Party such information with regard to its operations as shall be reasonably required.

12. **Regulatory Jurisdiction**

The Parties acknowledge that NW Natural is a public utility company subject to regulation and control by various state and federal governmental regulatory agencies. The provisions of this Agreement shall be construed in aid of and not in derogation of the lawful control and regulatory power of any such agency.

13. **Damages**

In no event shall a Party be liable to another Party for any lost or prospective profits or any other special, punitive, exemplary, consequential, incidental or indirect losses or damages (in tort, contract or otherwise) under or in respect of this Agreement or for any failure of performance however caused, whether or not arising from the Party's sole, joint, or concurrent negligence. To the extent any payment required to be made under this Agreement is agreed by the Parties to

constitute liquidated damages, the Parties acknowledge that actual damages in such circumstances are difficult or impossible to determine and that such payment of liquidated damages constitutes a reasonable approximation of such damages, and not a penalty.

14. **Governing Law**

This Agreement shall be governed by and construed and enforced in accordance with the laws of the State of Oregon.

15. **Waiver**

Any of the terms and conditions of this Agreement may be waived at any time and from time to time by the Party entitled to the benefit of such term or condition, but a waiver in one instance shall not be construed as a waiver in any other instance. A failure to enforce any provision of this Agreement shall not operate as a waiver of such provision or of any other provision. A waiver by any Party in favor of another Party shall not bind any regulatory agency with jurisdiction over such matter if the agency determines that such waiver would violate its regulations, orders, or applicable statutes.

16. **Assignment**

This Agreement shall be binding upon the Parties and their representatives and may not be assigned.

17. **Termination**

NW Natural reserves the right at any time upon thirty (30) days notice to its Affiliates to terminate this Agreement in whole or part. NW Natural shall promptly notify the OPUC and/or WUTC, if applicable, of such termination. NW Natural, or any Affiliate, reserves the right at any time upon notice to the other to terminate any or all of NW Natural or any Affiliate's Services Request(s) under this Agreement.

18. **Integrated Agreement**

This Agreement embodies the entire agreement and understanding between the Parties and does not supersede any prior agreement between such Parties, but governs all agreements entered into after the Effective Date. This Agreement may be executed by the Parties in separate counterparts, each of which when executed and delivered shall be an original, but which together shall constitute but one and the same agreement.

19. **Adoption of Agreement by Affiliates**

At such time that a NW Natural Affiliate requests or provides Services from/to any Party to this Agreement, the Affiliate shall sign Addendum 3 which adopts this Agreement.

Addendum 2:
Updated April 2023

List of Services

This Addendum provides a description of the Services that **may be** performed by the Parties, which may be modified from time to time. This list is exemplary only, and nothing in this addendum suggests that such services have or shall actually be performed by or for any Party. The specific Services to be provided to a particular Party are set forth in Addendum 3.

All Services provided by the Parties shall be based on a mutually agreeable work scope, specifying the scope of Services, personnel, and budget for Services. Changes in the scope of work shall be agreed to by the Parties involved.

Executives – Management Oversight	Provided executive and management oversight.
Internal Auditing / Business Controls and SOX	Reviews internal controls and procedures to ensure assets are safeguarded and transactions are properly authorized and recorded. Reviews current or proposed processes for improvements, compliance or SOX and audit requirements. Periodically audits accounting and other records and coordinates their examination, where applicable, with that of independent public accountants.
Legal	Provide legal advice and assistance with respect to labor and employment law, litigation, contracts, rates and regulation, environmental matters, and real estate legal issues, as well as, authorizations and compliance with matters under federal and state laws.
Corporate and Strategic Planning and Business Analysis and Development	Facilitates preparation of strategic plans, monitors trends and evaluates business opportunities, including acquisitions and dispositions. Facilitates process improvements by investigating and conducting research into issues relating to production, utilization, testing, manufacture, transmission, storage and distribution of energy. Keeps current on all research developments and programs of significance affecting company and the energy industry. Conducts research and development in promising areas and advises and assists in the solution of technical problems.

Accounting/ Accounts Payable/Finance/Budgeting/Treasury	Provide advice and assistance to Company in finance, treasury and accounting matters, including the development of accounting practices, procedures and controls, the maintenance of the general ledger and related subsidiary financial systems, the preparation and analysis of financial reports, treasury management and credit. Provide services related to managing all administrative activities associated with financing, including management of capital structure; cash, credit and risk management activities; investment and commercial banking relationships; oversight of retirement trust funds and general financing activities. Advise and assist company and Affiliates in studying and planning in connection with infrastructure, budgets, economic forecasts, benchmarking, capital expenditures and special projects. Provide centralized accounts payable processing. Provide shared services management and respective intercompany accounting and settlement processes.
Tax	Advise and assist in the preparation of federal, state and other tax returns, and respective tax accounting entries and generally advise company as to any issues involving taxes.
Risk Management	Advise and assist company in its risk and control framework. Manage the purchase and administration of all property and casualty insurance including the settlement of insured claims and in providing risk prevention advice.
Land and Environmental	Provide right of way services, including encroachments. Establishes policies and procedures for compliance with environmental laws and regulations. Researches emerging environmental issues and monitors compliance with environmental requirements. Provides oversight for environmental remediation services.
Corporate Communications	Prepares and disseminates information to employees, customers, government agencies, communities and the media.
Public Policy and Governmental Affairs	Provide services in support of corporate strategies for managing relationships with federal, state and local governments, agencies

	and legislative bodies. Monitor, review, research, and advocate legislative issues. Formulate and assist with public relations and communications programs and administration of corporate contribution and community affairs programs.
Human Resources/Employee Benefits/Payroll/Safety	Advise and assist company in the formulation and administration of human resources and employee relations' policies and programs relating to personnel administration, training, wage and salary administration and safety programs. Provide central accounting for employee benefits and payroll. Direct and administer all medical and health activities for company. Advise and assist company in the administration of such plans and prepare and maintain records of employee and company accounts under the said plans, together with such statistical data and reports as are pertinent to the plans. Provide centralized payroll system.
Information Technology and Services	Provide the resources for the operation of an information technology function, including the development, implementation, and operation of a centralized data processing facility and the management of a telecommunications network. This function includes the central processing of computerized applications, support of individual applications and the development, implementation and processing of those computerized applications that can be best accomplished on a centralized basis. This function provides centralized help desk.
Facilities Management / Security	Manage headquarters facilities, service centers, and district offices. Administers contracts for real estate leases, security, housekeeping, and maintenance of facilities. Maintain database of real estate contracts, managing lease/rental properties, handling purchases and sales of real property.
Office Services/Clerical Administrative Services	Provide centralized mail, imaging, record management services, and other general administrative support services.
Purchasing and Stores	Procure materials, supplies and services necessary for all operations, with the exception of wholesale gas purchases. Manage materials and supplies inventories. Work closely with

	business unit teams, seeking the best value for company through refined sourcing strategies, contracts and supplier agreements.
Marketing	Provide initial contact service related to new customer additions. Plan, formulate and implement marketing programs, as well as provide associated marketing services to improving customer satisfaction, load retention and shaping, growth of energy sales and deliveries, etc. Assist in carrying out policies and programs for the development of plant location and of industrial, commercial and wholesale markets. Provide customer support for industrial and commercial customers. Assist large customers in meeting business requirements related to gas quality, conservation, etc. Seek to maintain positive working relationships with major customers.
Engineering and Operations	Provide advice and assistance to Company in engineering and operations matters.
Rates and Regulatory	Provide advice and assistance to Company in rates and regulatory matters. Provide centralized rates and regulatory services and regulatory compliance.
Front Office – Gas Supply	Provide advice and assistance to Company in Gas Supply purchasing and compliance matters.
Other Services/Functions as Requested	Provide advice and assistance to Company in other matters including, but not limited to, Project Management, Safety, etc.

Any Customer may pay to rent supplementary displacement type meters from the Company on a monthly basis calculated at theas follow sing rates: (C) (C) (D) (N) (R)

$$= \frac{Net\ Present\ Value\ (\text{Total Cost to Serve Meter at Discount Rate } r \text{ over Period } t)}{12}$$

- The Rental Meter is the meter inclusive of an Encoder Receiver Transmitter (ERT), if necessary, as well as required fittings and components (e.g., swivel, gasket, flange, etc.) which can vary by meter type and size.
- Cost to Serve incudes incremental capital-related costs (the cost of the Rental Meter) as well as any other costs customarily relating to recovery of the utility investment, including but not limited to capital depreciation, regulatory fees, and income and property taxes.
- Discount Rate *r* is the weighted cost of capital and cost of long-term debt authorized by the Commission in the Company's most recent general rate case. Period *t* is equal to the total depreciable life (in years) of the assembled meter set.

The Net Present Value calculation produces a levelized cost of the Company to serve the rental meter at Discount Rate *r* over Period *t*. Dividing this value by 12 produces the Monthly Meter Rental Charge.

The Company will consult with the Customer regarding available meters of sizes and pressures that meet their service requirements prior to entering into a rental agreement. The meter rental charge, which is calculated as a monthly rate as described above, is presented to the Customer prior to the rental period and installation at the Customer premise. (N)

RATE SCHEDULE 10
CHARGES FOR SPECIAL METERING EQUIPMENT, RENTAL METERS AND METERING SERVICES
(continued)

Metering Services and Charges	One Time Charge	Installation Charge	Monthly Charge	
Rental Read	---	---	$0.36	
Advanced Automated Meter Reading (AAMR) Device[1]	---	$1,270.53	$~~48.05~~52.49	(~~I~~R)
Remote Index	---	$50.00	$4.00	
Pulse Output	---	$100.00	$8.00	
Administrative Set-Up/Consultation Fee (all meters)	$145~~00~~.00	---	---	(I)
Technical Assistance (Rotary meters only)	$145~~00~~.00	---	---	(I)

[1] Site specific engineering design costs for AAMR will be added to the installation charge if needed.

SPECIAL PROVISIONS FOR RENTAL METERS AND SPECIAL METERING EQUIPMENT:

1. Prior to receiving service under this section of the Schedule, the Customer must sign a service agreement that requires a minimum 12-month term. Customers who terminate service after less than 12 months will be required to pay all charges otherwise due to fulfill the 12-month obligation under the service agreement.
2. Service under this section of this Schedule is voluntary and separate from billing for or delivery of natural gas to a Customer's premise.
3. Since the Company does not maintain an inventory of all meter types offered under this Schedule, a delay may occur from the time a Customer requests service under this Schedule until the Company can provide it.
4. The Customer will be responsible for the meter pick-up and return of diaphragm meters.
5. The Customer will incur the Administrative Set-Up/Consultation Fee for each rental meter.
6. Upon delivery of a rotary meter, the Customer will incur the Technical Assistance charge listed above for each rental rotary meter. A Customer may not waive this provision or the associated fee. Technical assistance helps the Company ensure proper handling of rotary meters.
7. The Company will install AAMR devices for the charge listed above. AAMR devices will only be installed on Company owned meters and the Company will require that the Customer provide active and continuous electric power per company specifications to enable meter communications.
8. Upon request, the Company will provide one differential test per calendar year on rotary meters. The testing will be scheduled at the Company's convenience.
9. The Customer is responsible to protect all rental equipment from damage including but not limited to installing parking bollards to protect the rental equipment from vehicular or other damage.

RATE SCHEDULE 27
RESIDENTIAL HEATING DRY-OUT SERVICE

AVAILABLE:
To Residential home builders, developers, and contractors during the period that a Residential dwelling is under construction, in all territory served by the Company under the Tariff of which this schedule is a part.

SERVICE DESCRIPTION:
Service under this Rate Schedule is restricted to the use of gas in approved permanently-installed gas heating equipment in place during the period the dwelling is under construction. Upon occupancy of the dwelling, service under this Rate Schedule shall terminate automatically. In no event will service under this Rate Schedule continue for more a period of time greater than twelve (12) months from the date the gas meter is set at the dwelling. Upon termination of service under this Rate Schedule, gas service shall transfer to **Schedule 1** or **Schedule 2**, whichever is applicable.

MONTHLY RATE: Effective: ~~January 1, 2025~~September 30, 2025 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate
Customer Charge:	$9.00	---	---	---	**$9.00**
Volumetric Charge (per therm)					
All therms	~~$0.31253~~ $0.79988	$0.10337	$0.43274	~~$0.26727~~ $0.26973	~~**$1.11591**~~**$1.60572** (I~~R~~)

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

GENERAL TERMS:
Service under this Rate Schedule is governed by the terms of this Rate Schedule, the General Rules and Regulations contained in this Tariff and by all rules and regulations prescribed by regulatory authorities, as amended from time to time.

Issued ~~December 18, 2024~~August 29, 2025

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

The following is a brief description of the applicable Schedules:

Schedule A "Billing for City and County Exactions."
This adjustment will be reflected directly on Customer bills.

Schedule 201 "Temporary (Technical) Adjustments to Rates."
These are temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 203 "Purchased Gas Cost Adjustments to Rates."
These are pipeline capacity and commodity charges.

Schedule 207 "General Adjustments to Rates."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 210 "Adjustment to Rates for Property Sales."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 212 "Adjustment to Rates Residential Rate Mitigation."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 215 "Adjustment to Rates for Energy Conservation Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 220 "Special Rate Adjustment."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 221 "Rate Adjustment for Updated Depreciation Rates"
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 230 "Temporary Adjustments to Rates for Low-Income Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 231 "Temporary Adjustments to Rates for Residential Discount Program."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 232 "Temporary Adjustments to Rates for Regulatory Fee Increase"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 233 "Temporary Adjustments to Rates for Industrial Customer Energy Efficiency Audit Costs"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 234 "Temporary Adjustments to Rates for Residential Arrearage Management Program" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 235 "Temporary Adjustments to Rates for COVID-19 Public Health Emergency" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

(K)

(K) Schedules 303, 305, 306 and 308 transferred to Sheet 200.3.

(continue to Sheet 200.3)

Schedule 303 "Washington Environmental Cost Recovery Mechanism."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 305 "Adjustment for Certain Income Taxes (2017 Federal Tax Cuts and Jobs Act)."
These are base and temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 306 "Multi-Year Rate Plan Adjustment."
These are base rate adjustments that will be added to the Billing Rate on the effective date of the Schedule.

Schedule 308 "Washington Climate Commitment Act Recovery Mechanism."
These are temporary rate adjustments that will be added to the Billing Rate on the effective date of the Schedule.

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

Schedule 236 "Temporary Adjustments to Rates for Meter Modernization Program." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 237 "Temporary Adjustments to Rates for TSA Operations and Maintenance Costs." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 238 "Adjustments to Rates for Provisional Capital Adjustment." (N)
These are base rate adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 303 "Washington Environmental Cost Recovery Mechanism." (M)

NWN WUTC Advice No. 25-03

Effective with service on
and after September 30, 2025

SCHEDULE J
GAS RESIDENTIAL ENERGY ASSISTANCE TARIFF (GREAT)

APPLICABLE:
To Residential Customers ("Households") that take service under Rate Schedule 1 or Rate Schedule 2 of this Tariff and that have qualified for bill payment assistance through a NW Natural authorized Delivery Agent.

PROGRAM YEAR:
Funds will be made available under this program on a continuous twelve-month basis. For accounting and ratemaking purposes, the program year will extend from October 1 through September 30 ("Program Year").

PROGRAM FUNDING:
Total Program Funds (where Total Program Funds are equal to customer grants plus administrative and delivery costs) are subject to a combined program year cap of $~~500~~750,000. This cap may be exceeded as need upon discussion and consensus of the GREAT Advisory Group. (C) ~~(N)~~ ~~(N)~~ ~~(N)~~

A surcharge will apply to the regular monthly bills of all Sales Service Class Customers that take service under Rate Schedules 1, 2, 3, 41 and 42. The surcharge will be designed to amortize the actual amount of Total Program Funds accumulated for the Program Year on an equal percent of margin basis, adjusted for revenue sensitive effects. The surcharge calculation will be included with the Company's Annual Purchased Gas Cost Adjustment filing, and will be effective November 1 of each year. The surcharge amount for the respective Rate Schedules will be set forth in Schedule 230 of this Tariff.

PROGRAM ADMINISTRATION AND DELIVERY:
This program will be administered through designated agencies ("Delivery Agents") that: (a) meet the criteria for a "Qualifying Organization" as defined in RCW 82.16.0497; (b) the Company determines is capable of meeting performance obligations under this program; and (c) executes a contract with the Company that is consistent with the terms of this Schedule.

Each Delivery Agent will have sole responsibility to screen and approve bill payment assistance applicants for eligibility. Each Agent shall follow the established protocols for the qualification of and disbursement to eligible participants in accordance with the guidelines established by the Washington Department of Commerce for disbursement of federal Low-Income Home Energy Assistance Program (LIHEAP) funds. Except that, for purposes of this program, income-eligibility will be based on gross household income (adjusted for household size) at or below 200% Federal Poverty Level (FPL) or 80% Area Median Income (AMI), whichever is greater. The GREAT Program will be available to eligible participants regardless of citizenship status.

NORTHWEST NATURAL GAS COMPANY

RATE YEAR 2 TARIFF SHEETS

LEGISLATIVE

August 29, 2025

RATE SCHEDULE 1
GENERAL SALES SERVICE

AVAILABLE:
To all Residential and Commercial Customer classes in all territory served by the Company under the Tariff of which this Rate Schedule is a part, except that service under this Rate Schedule is not available for Standby Service to Commercial Customers. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, is subject to the provisions of **Schedule E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment, including but not limited to one or any multiple or combination of the following:

(a) Non-ducted space heating equipment that does not qualify as primary heating systems under Rate Schedule 2, including but not limited to fireplace inserts, free standing gas stoves, and room heaters;
(b) Supplemental or Standby space heating equipment including but not limited to natural gas back-up to electric heat pumps, used in residential applications;
(c) Water heating equipment used to serve single-family residential swimming pools, spas, and hot tubs;
(d) Other equipment including, but not limited to, log lighter, gas log, gas barbecue, tiki torch, Bunsen burner, Domestic cooking equipment, hobby kilns, refrigeration or Domestic clothes drying;
(e) Equipment installed for use in detached garages, shops, or outbuildings.

MONTHLY RATE: Effective: ~~January 1, 2025~~ August 1, 2027 (C)
The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

RATE SCHEDULE 2
RESIDENTIAL SALES SERVICE

AVAILABLE:
To Residential Customers, in all territory served by the Company under the Tariff of which this Rate Schedule is a part. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, are subject to the provisions of **SCHEDULE E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment used in Residential dwellings that provide complete family living facilities in which the occupant normally cooks, eats, sleeps, and carries on the household operations incident to Domestic life, for at least one of the following purposes:

(a) Operation of ducted forced air Natural Gas space heating equipment that is the primary source for space heating requirements;
(b) Operation of a gas-fired hearth product or wall heater as the primary source for space heating requirements where the hearth or wall heater has a verified nameplate rating of 20,000 BTUs or greater, and is installed in a primary residence defined as a dwelling that is occupied year-round, and where that dwelling is 1,500 square feet or less; and, or;
(c) Operation of fully automatic water heating equipment for primary water heating requirements.

Service under this Rate Schedule includes the use of gas for equipment installed in addition to (a) and (b).

MONTHLY RATE: Effective: ~~January 1, 2025~~August 1, 2027 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

RATE SCHEDULE 10
CHARGES FOR SPECIAL METERING EQUIPMENT, RENTAL METERS AND METERING SERVICES
(continued)

Metering Services and Charges	One Time Charge	Installation Charge	Monthly Charge	
Rental Read	---	---	$0.36	
Advanced Automated Meter Reading (AAMR) Device[1]	---	$1,270.53	$~~48.05~~52.75	(~~I~~R)
Remote Index	---	$50.00	$4.00	
Pulse Output	---	$100.00	$8.00	
Administrative Set-Up/Consultation Fee (all meters)	$145~~00~~.00	---	---	(I)
Technical Assistance (Rotary meters only)	$145~~00~~.00	---	---	(I)

[1] Site specific engineering design costs for AAMR will be added to the installation charge if needed.

SPECIAL PROVISIONS FOR RENTAL METERS AND SPECIAL METERING EQUIPMENT:

1. Prior to receiving service under this section of the Schedule, the Customer must sign a service agreement that requires a minimum 12-month term. Customers who terminate service after less than 12 months will be required to pay all charges otherwise due to fulfill the 12-month obligation under the service agreement.
2. Service under this section of this Schedule is voluntary and separate from billing for or delivery of natural gas to a Customer's premise.
3. Since the Company does not maintain an inventory of all meter types offered under this Schedule, a delay may occur from the time a Customer requests service under this Schedule until the Company can provide it.
4. The Customer will be responsible for the meter pick-up and return of diaphragm meters.
5. The Customer will incur the Administrative Set-Up/Consultation Fee for each rental meter.
6. Upon delivery of a rotary meter, the Customer will incur the Technical Assistance charge listed above for each rental rotary meter. A Customer may not waive this provision or the associated fee. Technical assistance helps the Company ensure proper handling of rotary meters.
7. The Company will install AAMR devices for the charge listed above. AAMR devices will only be installed on Company owned meters and the Company will require that the Customer provide active and continuous electric power per company specifications to enable meter communications.
8. Upon request, the Company will provide one differential test per calendar year on rotary meters. The testing will be scheduled at the Company's convenience.
9. The Customer is responsible to protect all rental equipment from damage including but not limited to installing parking bollards to protect the rental equipment from vehicular or other damage.

(continue to Sheet 110.3)

RATE SCHEDULE 27
RESIDENTIAL HEATING DRY-OUT SERVICE

AVAILABLE:
To Residential home builders, developers, and contractors during the period that a Residential dwelling is under construction, in all territory served by the Company under the Tariff of which this schedule is a part.

SERVICE DESCRIPTION:
Service under this Rate Schedule is restricted to the use of gas in approved permanently-installed gas heating equipment in place during the period the dwelling is under construction. Upon occupancy of the dwelling, service under this Rate Schedule shall terminate automatically. In no event will service under this Rate Schedule continue for more a period of time greater than twelve (12) months from the date the gas meter is set at the dwelling. Upon termination of service under this Rate Schedule, gas service shall transfer to **Schedule 1** or **Schedule 2**, whichever is applicable.

MONTHLY RATE: Effective: January 1, 2025August 1, 2027 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

Firm Pipeline Capacity Charge - Peak Demand option (per therm of MDDV per month):	**$1.54**

[1] For Firm Sales Service, the Monthly Bill shall equal the sum of the Customer Charge, plus the Volumetric Charges, plus the Distribution Capacity Charge, plus the Storage Capacity Charge, plus the Pipeline Capacity Charge selected by the Customer, plus any other charges that may apply from Schedule C or Schedule 10.
[2] The stated rate is the Company's Annual Sales WACOG. However, the Commodity Component to be billed will be dependent on Customer's Service Type Selection and may instead be Winter Sales WACOG or Monthly Incremental Cost of Gas.
[3] Where applicable, as set forth in this rate schedule, the Account 191 portion of the Temporary Adjustments as set forth in Schedule 201 may not apply.

(continue to Sheet 142.10.1)

RATE SCHEDULE 42

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

The following is a brief description of the applicable Schedules:

Schedule A "Billing for City and County Exactions."
This adjustment will be reflected directly on Customer bills.

Schedule 201 "Temporary (Technical) Adjustments to Rates."
These are temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 203 "Purchased Gas Cost Adjustments to Rates."
These are pipeline capacity and commodity charges.

Schedule 207 "General Adjustments to Rates."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 210 "Adjustment to Rates for Property Sales."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 212 "Adjustment to Rates Residential Rate Mitigation."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 215 "Adjustment to Rates for Energy Conservation Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 220 "Special Rate Adjustment."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 221 "Rate Adjustment for Updated Depreciation Rates"
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 230 "Temporary Adjustments to Rates for Low-Income Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 231 "Temporary Adjustments to Rates for Residential Discount Program."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 232 "Temporary Adjustments to Rates for Regulatory Fee Increase"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 233 "Temporary Adjustments to Rates for Industrial Customer Energy Efficiency Audit Costs"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 234 "Temporary Adjustments to Rates for Residential Arrearage Management Program" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 235 "Temporary Adjustments to Rates for COVID-19 Public Health Emergency" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

(K)

(K) Schedules 303, 305, 306 and 308 transferred to Sheet 200.3.

(continue to Sheet 200.3)

Schedule 303 "Washington Environmental Cost Recovery Mechanism."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 305 "Adjustment for Certain Income Taxes (2017 Federal Tax Cuts and Jobs Act)."
These are base and temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 306 "Multi-Year Rate Plan Adjustment."
These are base rate adjustments that will be added to the Billing Rate on the effective date of the Schedule.

Schedule 308 "Washington Climate Commitment Act Recovery Mechanism."
These are temporary rate adjustments that will be added to the Billing Rate on the effective date of the Schedule.

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

Schedule 236 "Temporary Adjustments to Rates for Meter Modernization Program." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 237 "Temporary Adjustments to Rates for TSA Operations and Maintenance Costs." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 238 "Adjustments to Rates for Provisional Capital Adjustment." (N)
These are base rate adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 303 "Washington Environmental Cost Recovery Mechanism." (M)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 305 "Adjustment for Certain Income Taxes (2017 Federal Tax Cuts and Jobs Act)."
These are base and temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 306 "Multi-Year Rate Plan Adjustment."
These are base rate adjustments that will be added to the Billing Rate on the effective date of the Schedule.

Schedule 308 "Washington Climate Commitment Act Recovery Mechanism."
These are temporary rate adjustments that will be added to the Billing Rate on the effective date of the Schedule. (M)

(M) Schedules 303, 305, 306 and 308 transferred from Sheet 200.2.

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION Complainant, v. NORTHWEST NATURAL GAS COMPANY, Respondent.	DOCKET UG-250610

NORTHWEST NATURAL GAS COMPANY

RATE YEAR 3 TARIFF SHEETS

LEGISLATIVE

August 29, 2025

RATE SCHEDULE 1
GENERAL SALES SERVICE

AVAILABLE:
To all Residential and Commercial Customer classes in all territory served by the Company under the Tariff of which this Rate Schedule is a part, except that service under this Rate Schedule is not available for Standby Service to Commercial Customers. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, is subject to the provisions of **Schedule E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment, including but not limited to one or any multiple or combination of the following:

(a) Non-ducted space heating equipment that does not qualify as primary heating systems under Rate Schedule 2, including but not limited to fireplace inserts, free standing gas stoves, and room heaters;
(b) Supplemental or Standby space heating equipment including but not limited to natural gas back-up to electric heat pumps, used in residential applications;
(c) Water heating equipment used to serve single-family residential swimming pools, spas, and hot tubs;
(d) Other equipment including, but not limited to, log lighter, gas log, gas barbecue, tiki torch, Bunsen burner, Domestic cooking equipment, hobby kilns, refrigeration or Domestic clothes drying;
(e) Equipment installed for use in detached garages, shops, or outbuildings.

MONTHLY RATE: Effective: August 1, 2028~~January 1, 2025~~ (C)
The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

(continue to Sheet 101.2)

RATE SCHEDULE 2
RESIDENTIAL SALES SERVICE

AVAILABLE:
To Residential Customers, in all territory served by the Company under the Tariff of which this Rate Schedule is a part. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, are subject to the provisions of **SCHEDULE E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment used in Residential dwellings that provide complete family living facilities in which the occupant normally cooks, eats, sleeps, and carries on the household operations incident to Domestic life, for at least one of the following purposes:

(a) Operation of ducted forced air Natural Gas space heating equipment that is the primary source for space heating requirements;
(b) Operation of a gas-fired hearth product or wall heater as the primary source for space heating requirements where the hearth or wall heater has a verified nameplate rating of 20,000 BTUs or greater, and is installed in a primary residence defined as a dwelling that is occupied year-round, and where that dwelling is 1,500 square feet or less; and, or;
(c) Operation of fully automatic water heating equipment for primary water heating requirements.

Service under this Rate Schedule includes the use of gas for equipment installed in addition to (a) and (b).

MONTHLY RATE: Effective: ~~January 1, 2025~~August 1, 2028 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

RATE SCHEDULE 10
CHARGES FOR SPECIAL METERING EQUIPMENT, RENTAL METERS AND METERING SERVICES
(continued)

Metering Services and Charges	One Time Charge	Installation Charge	Monthly Charge	
Rental Read	---	---	$0.36	
Advanced Automated Meter Reading (AAMR) Device[1]	---	$1,270.53	$~~48.05~~52.82	(~~I~~R)
Remote Index	---	$50.00	$4.00	
Pulse Output	---	$100.00	$8.00	
Administrative Set-Up/Consultation Fee (all meters)	$145~~00~~.00	---	---	(I)
Technical Assistance (Rotary meters only)	$145~~00~~.00	---	---	(I)

[1] Site specific engineering design costs for AAMR will be added to the installation charge if needed.

SPECIAL PROVISIONS FOR RENTAL METERS AND SPECIAL METERING EQUIPMENT:

1. Prior to receiving service under this section of the Schedule, the Customer must sign a service agreement that requires a minimum 12-month term. Customers who terminate service after less than 12 months will be required to pay all charges otherwise due to fulfill the 12-month obligation under the service agreement.
2. Service under this section of this Schedule is voluntary and separate from billing for or delivery of natural gas to a Customer's premise.
3. Since the Company does not maintain an inventory of all meter types offered under this Schedule, a delay may occur from the time a Customer requests service under this Schedule until the Company can provide it.
4. The Customer will be responsible for the meter pick-up and return of diaphragm meters.
5. The Customer will incur the Administrative Set-Up/Consultation Fee for each rental meter.
6. Upon delivery of a rotary meter, the Customer will incur the Technical Assistance charge listed above for each rental rotary meter. A Customer may not waive this provision or the associated fee. Technical assistance helps the Company ensure proper handling of rotary meters.
7. The Company will install AAMR devices for the charge listed above. AAMR devices will only be installed on Company owned meters and the Company will require that the Customer provide active and continuous electric power per company specifications to enable meter communications.
8. Upon request, the Company will provide one differential test per calendar year on rotary meters. The testing will be scheduled at the Company's convenience.
9. The Customer is responsible to protect all rental equipment from damage including but not limited to installing parking bollards to protect the rental equipment from vehicular or other damage.

(continue to Sheet 110.3)

RATE SCHEDULE 27
RESIDENTIAL HEATING DRY-OUT SERVICE

AVAILABLE:
To Residential home builders, developers, and contractors during the period that a Residential dwelling is under construction, in all territory served by the Company under the Tariff of which this schedule is a part.

SERVICE DESCRIPTION:
Service under this Rate Schedule is restricted to the use of gas in approved permanently-installed gas heating equipment in place during the period the dwelling is under construction. Upon occupancy of the dwelling, service under this Rate Schedule shall terminate automatically. In no event will service under this Rate Schedule continue for more a period of time greater than twelve (12) months from the date the gas meter is set at the dwelling. Upon termination of service under this Rate Schedule, gas service shall transfer to **Schedule 1** or **Schedule 2**, whichever is applicable.

MONTHLY RATE: Effective: ~~January 1, 2025~~August 1, 2028 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate
Customer Charge:	$9.00	---	---	---	**$9.00**
Volumetric Charge (per therm)					
All therms	~~$0.31253~~ $0.99357	$0.10337	$0.43274	~~$0.26727~~ $0.27817	~~**$1.11591**~~ **$1.80785** (I~~R~~)

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

GENERAL TERMS:
Service under this Rate Schedule is governed by the terms of this Rate Schedule, the General Rules and Regulations contained in this Tariff and by all rules and regulations prescribed by regulatory authorities, as amended from time to time.

Issued August 29, 2025
NWN WUTC Advice No. 25-03

Effective with service on
and after August 1, 2028

BEFORE THE

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION Complainant, v. NORTHWEST NATURAL GAS COMPANY, Respondent.	DOCKET UG-250610

NORTHWEST NATURAL GAS COMPANY

RATE YEAR 1 TARIFF SHEETS

PROPOSED

August 29, 2025

RATE SCHEDULE 1
GENERAL SALES SERVICE

AVAILABLE:
To all Residential and Commercial Customer classes in all territory served by the Company under the Tariff of which this Rate Schedule is a part, except that service under this Rate Schedule is not available for Standby Service to Commercial Customers. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, is subject to the provisions of **Schedule E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment, including but not limited to one or any multiple or combination of the following:

(a) Non-ducted space heating equipment that does not qualify as primary heating systems under Rate Schedule 2, including but not limited to fireplace inserts, free standing gas stoves, and room heaters;
(b) Supplemental or Standby space heating equipment including but not limited to natural gas back-up to electric heat pumps, used in residential applications;
(c) Water heating equipment used to serve single-family residential swimming pools, spas, and hot tubs;
(d) Other equipment including, but not limited to, log lighter, gas log, gas barbecue, tiki torch, Bunsen burner, Domestic cooking equipment, hobby kilns, refrigeration or Domestic clothes drying;
(e) Equipment installed for use in detached garages, shops, or outbuildings.

MONTHLY RATE: Effective: September 30, 2025 (C)
The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate	
Residential:						
Customer Charge	$8.00				**$8.00**	(I)
Schedule 308 Credits (per bill)				($1.82)	**($1.82)**

RATE SCHEDULE 2
RESIDENTIAL SALES SERVICE

AVAILABLE:
To Residential Customers, in all territory served by the Company under the Tariff of which this Rate Schedule is a part. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, are subject to the provisions of **SCHEDULE E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment used in Residential dwellings that provide complete family living facilities in which the occupant normally cooks, eats, sleeps, and carries on the household operations incident to Domestic life, for at least one of the following purposes:

(a) Operation of ducted forced air Natural Gas space heating equipment that is the primary source for space heating requirements;
(b) Operation of a gas-fired hearth product or wall heater as the primary source for space heating requirements where the hearth or wall heater has a verified nameplate rating of 20,000 BTUs or greater, and is installed in a primary residence defined as a dwelling that is occupied year-round, and where that dwelling is 1,500 square feet or less; and, or;
(c) Operation of fully automatic water heating equipment for primary water heating requirements.

Service under this Rate Schedule includes the use of gas for equipment installed in addition to (a) and (b).

MONTHLY RATE: Effective: September 30, 2025 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate
Customer Charge:	$8.00				**$8.00**
Schedule 308 Credits - Winter (per bill)				($10.97)	**($10.97)**
Schedule 308 Credits - Non-Winter (per bill)				($4.84)	**($4.84)**
Volumetric Charge (per therm)	$0.84344	$0.10337	$0.43274	$0.22427	**$1.60382** (I)

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

RATE SCHEDULE 3
BASIC FIRM SALES SERVICE - NON-RESIDENTIAL
(continued)

MONTHLY RATE: Effective: September 30, 2025 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **SCHEDULE 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

[2] The Commodity Component will be either Annual Sales WACOG or Monthly Incremental Cost of Gas.
[3] Applies to Standby Sales Service only.

Minimum Monthly Bill. The Minimum Monthly Bill shall be any **Schedule C** and **Schedule 10** Charges, plus:

(a) ***Firm Sales Service.*** Customer Charge
(b) ***Firm Sales Standby Service.*** Customer Charge, plus Standby Service Charge

RATE SCHEDULE 10
CHARGES FOR SPECIAL METERING EQUIPMENT, RENTAL METERS AND METERING SERVICES

AVAILABLE:
In all territory served by the Company under the Tariff of which this Rate Schedule is a part.

TERM OF SERVICE:
The Term of Service for monthly meter rentals and metering services provided under this Schedule is one (1) Year. At the end of a full Term of Service, service under this Rate Schedule will continue on a billing month basis until terminated by either the Customer or the Company upon one (1) billing month advance notice.

MONTHLY METER RENTAL RATES AND SPECIAL METERING EQUPMENT (OPTIONAL):

Any Customer may pay to rent supplementary displacement type meters from the Company on a monthly basis calculated as follows: (C) (C) (D) (N)

$$= \frac{Net\ Present\ Value\ (\text{Total Cost to Serve Meter at Discount Rate } r \text{ over Period } t)}{12}$$

- The Rental Meter is the meter inclusive of an Encoder Receiver Transmitter (ERT), if necessary, as well as required fittings and components (e.g., swivel, gasket, flange, etc.) which can vary by meter type and size.
- Cost to Serve incudes incremental capital-related costs (the cost of the Rental Meter) as well as any other costs customarily relating to recovery of the utility investment, including but not limited to capital depreciation, regulatory fees, and income and property taxes.
- Discount Rate *r* is the weighted cost of capital and cost of long-term debt authorized by the Commission in the Company's most recent general rate case. Period *t* is equal to the total depreciable life (in years) of the assembled meter set.

The Net Present Value calculation produces a levelized cost of the Company to serve the rental meter at Discount Rate *r* over Period *t*. Dividing this value by 12 produces the Monthly Meter Rental Charge.

The Company will consult with the Customer regarding available meters of sizes and pressures that meet their service requirements prior to entering into a rental agreement. The meter rental charge, which is calculated as a monthly rate as described above, is presented to the Customer prior to the rental period and installation at the Customer premise. (N)

(continue to Sheet 110.2)

RATE SCHEDULE 10
CHARGES FOR SPECIAL METERING EQUIPMENT, RENTAL METERS AND METERING SERVICES
(continued)

Metering Services and Charges	One Time Charge	Installation Charge	Monthly Charge	
Rental Read	---	---	$0.36	
Advanced Automated Meter Reading (AAMR) Device[1]	---	$1,270.53	$52.49	(I)
Remote Index	---	$50.00	$4.00	
Pulse Output	---	$100.00	$8.00	
Administrative Set-Up/Consultation Fee (all meters)	$145.00	---	---	(I)
Technical Assistance (Rotary meters only)	$145.00	---	---	(I)

[1] Site specific engineering design costs for AAMR will be added to the installation charge if needed.

SPECIAL PROVISIONS FOR RENTAL METERS AND SPECIAL METERING EQUIPMENT:

1. Prior to receiving service under this section of the Schedule, the Customer must sign a service agreement that requires a minimum 12-month term. Customers who terminate service after less than 12 months will be required to pay all charges otherwise due to fulfill the 12-month obligation under the service agreement.
2. Service under this section of this Schedule is voluntary and separate from billing for or delivery of natural gas to a Customer's premise.
3. Since the Company does not maintain an inventory of all meter types offered under this Schedule, a delay may occur from the time a Customer requests service under this Schedule until the Company can provide it.
4. The Customer will be responsible for the meter pick-up and return of diaphragm meters.
5. The Customer will incur the Administrative Set-Up/Consultation Fee for each rental meter.
6. Upon delivery of a rotary meter, the Customer will incur the Technical Assistance charge listed above for each rental rotary meter. A Customer may not waive this provision or the associated fee. Technical assistance helps the Company ensure proper handling of rotary meters.
7. The Company will install AAMR devices for the charge listed above. AAMR devices will only be installed on Company owned meters and the Company will require that the Customer provide active and continuous electric power per company specifications to enable meter communications.
8. Upon request, the Company will provide one differential test per calendar year on rotary meters. The testing will be scheduled at the Company's convenience.
9. The Customer is responsible to protect all rental equipment from damage including but not limited to installing parking bollards to protect the rental equipment from vehicular or other damage.

(continue to Sheet 110.3)

RATE SCHEDULE 27
RESIDENTIAL HEATING DRY-OUT SERVICE

AVAILABLE:
To Residential home builders, developers, and contractors during the period that a Residential dwelling is under construction, in all territory served by the Company under the Tariff of which this schedule is a part.

SERVICE DESCRIPTION:
Service under this Rate Schedule is restricted to the use of gas in approved permanently-installed gas heating equipment in place during the period the dwelling is under construction. Upon occupancy of the dwelling, service under this Rate Schedule shall terminate automatically. In no event will service under this Rate Schedule continue for more a period of time greater than twelve (12) months from the date the gas meter is set at the dwelling. Upon termination of service under this Rate Schedule, gas service shall transfer to **Schedule 1** or **Schedule 2**, whichever is applicable.

MONTHLY RATE: Effective: September 30, 2025 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate
Customer Charge:	$9.00	---	---	---	**$9.00**
Volumetric Charge (per therm)					
All therms	$0.79988	$0.10337	$0.43274	$0.26973	**$1.60572** (I)

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

GENERAL TERMS:
Service under this Rate Schedule is governed by the terms of this Rate Schedule, the General Rules and Regulations contained in this Tariff and by all rules and regulations prescribed by regulatory authorities, as amended from time to time.

RATE SCHEDULE 41
NON-RESIDENTIAL SALES AND TRANSPORTATION SERVICE
(continued)

MONTHLY RATES FOR COMMERCIAL CUSTOMER CLASS: Effective: September 30, 2025 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. **SEE SCHEDULE 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

The following is a brief description of the applicable Schedules:

Schedule A "Billing for City and County Exactions."
This adjustment will be reflected directly on Customer bills.

Schedule 201 "Temporary (Technical) Adjustments to Rates."
These are temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 203 "Purchased Gas Cost Adjustments to Rates."
These are pipeline capacity and commodity charges.

Schedule 207 "General Adjustments to Rates."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 210 "Adjustment to Rates for Property Sales."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 212 "Adjustment to Rates Residential Rate Mitigation."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 215 "Adjustment to Rates for Energy Conservation Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 220 "Special Rate Adjustment."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 221 "Rate Adjustment for Updated Depreciation Rates"
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 230 "Temporary Adjustments to Rates for Low-Income Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 231 "Temporary Adjustments to Rates for Residential Discount Program."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 232 "Temporary Adjustments to Rates for Regulatory Fee Increase"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 233 "Temporary Adjustments to Rates for Industrial Customer Energy Efficiency Audit Costs"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 234 "Temporary Adjustments to Rates for Residential Arrearage Management Program." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 235 "Temporary Adjustments to Rates for COVID-19 Public Health Emergency." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

(K)

(K) Schedules 303, 305, 306 and 308 transferred to Sheet 200.3.

(continue to Sheet 200.3)

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

Schedule 236 "Temporary Adjustments to Rates for Meter Modernization Program." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 237 "Temporary Adjustments to Rates for TSA Operations and Maintenance Costs." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 238 "Adjustments to Rates for Provisional Capital Adjustment." (N)
These are base rate adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 303 "Washington Environmental Cost Recovery Mechanism." (M)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 305 "Adjustment for Certain Income Taxes (2017 Federal Tax Cuts and Jobs Act)."
These are base and temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 306 "Multi-Year Rate Plan Adjustment."
These are base rate adjustments that will be added to the Billing Rate on the effective date of the Schedule.

Schedule 308 "Washington Climate Commitment Act Recovery Mechanism."
These are temporary rate adjustments that will be added to the Billing Rate on the effective date of the Schedule. (M)

(M) Schedules 303, 305, 306 and 308 transferred from Sheet 200.2.

SCHEDULE 207
GENERAL RATE ADJUSTMENT

PURPOSE:
To identify the effects of general rate changes approved in the company's most recent general rate case proceeding (Docket UG-200994)

APPLICATION TO RATE SCHEDULES: Effective: September 30, 2025 (C)

Rate Schedule 1	Rate Schedule 3	Rate Schedule 41	Rate Schedule 43
Rate Schedule 2	Rate Schedule 27	Rate Schedule 42	

The Base Rates in the listed Rate Schedules include the adjustment shown below.
NO FURTHER ADJUSTMENT TO RATES IS REQUIRED.

SCHEDULE J
GAS RESIDENTIAL ENERGY ASSISTANCE TARIFF (GREAT)

APPLICABLE:
To Residential Customers ("Households") that take service under Rate Schedule 1 or Rate Schedule 2 of this Tariff and that have qualified for bill payment assistance through a NW Natural authorized Delivery Agent.

PROGRAM YEAR:
Funds will be made available under this program on a continuous twelve-month basis. For accounting and ratemaking purposes, the program year will extend from October 1 through September 30 ("Program Year").

PROGRAM FUNDING:
Total Program Funds (where Total Program Funds are equal to customer grants plus administrative and delivery costs) are subject to a combined program year cap of $750,000. This cap may be exceeded as need upon discussion and consensus of the GREAT Advisory Group. (C)

A surcharge will apply to the regular monthly bills of all Sales Service Class Customers that take service under Rate Schedules 1, 2, 3, 41 and 42. The surcharge will be designed to amortize the actual amount of Total Program Funds accumulated for the Program Year on an equal percent of margin basis, adjusted for revenue sensitive effects. The surcharge calculation will be included with the Company's Annual Purchased Gas Cost Adjustment filing, and will be effective November 1 of each year. The surcharge amount for the respective Rate Schedules will be set forth in Schedule 230 of this Tariff.

PROGRAM ADMINISTRATION AND DELIVERY:
This program will be administered through designated agencies ("Delivery Agents") that: (a) meet the criteria for a "Qualifying Organization" as defined in RCW 82.16.0497; (b) the Company determines is capable of meeting performance obligations under this program; and (c) executes a contract with the Company that is consistent with the terms of this Schedule.

Each Delivery Agent will have sole responsibility to screen and approve bill payment assistance applicants for eligibility. Each Agent shall follow the established protocols for the qualification of and disbursement to eligible participants in accordance with the guidelines established by the Washington Department of Commerce for disbursement of federal Low-Income Home Energy Assistance Program (LIHEAP) funds. Except that, for purposes of this program, income-eligibility will be based on gross household income (adjusted for household size) at or below 200% Federal Poverty Level (FPL) or 80% Area Median Income (AMI), whichever is greater. The GREAT Program will be available to eligible participants regardless of citizenship status.

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION Complainant, v. NORTHWEST NATURAL GAS COMPANY, Respondent.	DOCKET UG-250610

NORTHWEST NATURAL GAS COMPANY

RATE YEAR 2 TARIFF SHEETS

PROPOSED

August 29, 2025

RATE SCHEDULE 1
GENERAL SALES SERVICE

AVAILABLE:
To all Residential and Commercial Customer classes in all territory served by the Company under the Tariff of which this Rate Schedule is a part, except that service under this Rate Schedule is not available for Standby Service to Commercial Customers. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, is subject to the provisions of **Schedule E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment, including but not limited to one or any multiple or combination of the following:

(a) Non-ducted space heating equipment that does not qualify as primary heating systems under Rate Schedule 2, including but not limited to fireplace inserts, free standing gas stoves, and room heaters;
(b) Supplemental or Standby space heating equipment including but not limited to natural gas back-up to electric heat pumps, used in residential applications;
(c) Water heating equipment used to serve single-family residential swimming pools, spas, and hot tubs;
(d) Other equipment including, but not limited to, log lighter, gas log, gas barbecue, tiki torch, Bunsen burner, Domestic cooking equipment, hobby kilns, refrigeration or Domestic clothes drying;
(e) Equipment installed for use in detached garages, shops, or outbuildings.

MONTHLY RATE: Effective: August 1, 2027 (C)
The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate	
Residential:						
Customer Charge	$10.00				$10.00	(I)
Schedule 308 Credits (per bill)				($1.82)	**($1.82)**	
Volumetric Charge (per therm)	$1.18963	$0.10337	$0.43274	$0.30287	**$2.02861**	(I)
Commercial:						
Customer Charge	$10.00				**$10.00**	(I)
Schedule 308 Credits (per bill)				$(5.34)	**($5.34)**

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

(continue to Sheet 101.2)

RATE SCHEDULE 2
RESIDENTIAL SALES SERVICE

AVAILABLE:
To Residential Customers, in all territory served by the Company under the Tariff of which this Rate Schedule is a part. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, are subject to the provisions of **SCHEDULE E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment used in Residential dwellings that provide complete family living facilities in which the occupant normally cooks, eats, sleeps, and carries on the household operations incident to Domestic life, for at least one of the following purposes:

(a) Operation of ducted forced air Natural Gas space heating equipment that is the primary source for space heating requirements;
(b) Operation of a gas-fired hearth product or wall heater as the primary source for space heating requirements where the hearth or wall heater has a verified nameplate rating of 20,000 BTUs or greater, and is installed in a primary residence defined as a dwelling that is occupied year-round, and where that dwelling is 1,500 square feet or less; and, or;
(c) Operation of fully automatic water heating equipment for primary water heating requirements.

Service under this Rate Schedule includes the use of gas for equipment installed in addition to (a) and (b).

MONTHLY RATE: Effective: August 1, 2027 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate	
Customer Charge:	$10.00				**$10.00**	(I)
Schedule 308 Credits - Winter (per bill)				($10.97)	**($10.97)**	
Schedule 308 Credits - Non-Winter (per bill)				($4.84)	**($4.84)**	
Volumetric Charge (per therm)	$0.90239	$0.10337	$0.43274	$0.22426	**$1.66276**	(I)

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

RATE SCHEDULE 3
BASIC FIRM SALES SERVICE - NON-RESIDENTIAL
(continued)

MONTHLY RATE: Effective: August 1, 2027 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **SCHEDULE 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

FIRM SALES SERVICE CHARGES (03 SF):					**Billing Rates [1]**

(a) ***Firm Sales Service.*** Customer Charge
(b) ***Firm Sales Standby Service.*** Customer Charge, plus Standby Service Charge

RATE SCHEDULE 10
CHARGES FOR SPECIAL METERING EQUIPMENT, RENTAL METERS AND METERING SERVICES
(continued)

Metering Services and Charges	One Time Charge	Installation Charge	Monthly Charge	
Rental Read	---	---	$0.36	
Advanced Automated Meter Reading (AAMR) Device[1]	---	$1,270.53	$52.75	(I)
Remote Index	---	$50.00	$4.00	
Pulse Output	---	$100.00	$8.00	
Administrative Set-Up/Consultation Fee (all meters)	$145.00	---	---	(I)
Technical Assistance (Rotary meters only)	$145.00	---	---	(I)

[1] Site specific engineering design costs for AAMR will be added to the installation charge if needed.

SPECIAL PROVISIONS FOR RENTAL METERS AND SPECIAL METERING EQUIPMENT:

1. Prior to receiving service under this section of the Schedule, the Customer must sign a service agreement that requires a minimum 12-month term. Customers who terminate service after less than 12 months will be required to pay all charges otherwise due to fulfill the 12-month obligation under the service agreement.
2. Service under this section of this Schedule is voluntary and separate from billing for or delivery of natural gas to a Customer's premise.
3. Since the Company does not maintain an inventory of all meter types offered under this Schedule, a delay may occur from the time a Customer requests service under this Schedule until the Company can provide it.
4. The Customer will be responsible for the meter pick-up and return of diaphragm meters.
5. The Customer will incur the Administrative Set-Up/Consultation Fee for each rental meter.
6. Upon delivery of a rotary meter, the Customer will incur the Technical Assistance charge listed above for each rental rotary meter. A Customer may not waive this provision or the associated fee. Technical assistance helps the Company ensure proper handling of rotary meters.
7. The Company will install AAMR devices for the charge listed above. AAMR devices will only be installed on Company owned meters and the Company will require that the Customer provide active and continuous electric power per company specifications to enable meter communications.
8. Upon request, the Company will provide one differential test per calendar year on rotary meters. The testing will be scheduled at the Company's convenience.
9. The Customer is responsible to protect all rental equipment from damage including but not limited to installing parking bollards to protect the rental equipment from vehicular or other damage.

(continue to Sheet 110.3)

RATE SCHEDULE 27
RESIDENTIAL HEATING DRY-OUT SERVICE

AVAILABLE:
To Residential home builders, developers, and contractors during the period that a Residential dwelling is under construction, in all territory served by the Company under the Tariff of which this schedule is a part.

SERVICE DESCRIPTION:
Service under this Rate Schedule is restricted to the use of gas in approved permanently-installed gas heating equipment in place during the period the dwelling is under construction. Upon occupancy of the dwelling, service under this Rate Schedule shall terminate automatically. In no event will service under this Rate Schedule continue for more a period of time greater than twelve (12) months from the date the gas meter is set at the dwelling. Upon termination of service under this Rate Schedule, gas service shall transfer to **Schedule 1** or **Schedule 2**, whichever is applicable.

MONTHLY RATE: Effective: August 1, 2027 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate
Customer Charge:	$9.00	---	---	---	**$9.00**
Volumetric Charge (per therm)					
All therms	$0.89745	$0.10337	$0.43274	$0.27052	**$1.70408** (I)

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

GENERAL TERMS:
Service under this Rate Schedule is governed by the terms of this Rate Schedule, the General Rules and Regulations contained in this Tariff and by all rules and regulations prescribed by regulatory authorities, as amended from time to time.

RATE SCHEDULE 41
NON-RESIDENTIAL SALES AND TRANSPORTATION SERVICE
(continued)

MONTHLY RATES FOR COMMERCIAL CUSTOMER CLASS: Effective: August 1, 2027 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. **SEE SCHEDULE 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

FIRM SALES SERVICE CHARGES (C41SF) [1]:					**Billing Rates**

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

The following is a brief description of the applicable Schedules:

Schedule A "Billing for City and County Exactions."
This adjustment will be reflected directly on Customer bills.

Schedule 201 "Temporary (Technical) Adjustments to Rates."
These are temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 203 "Purchased Gas Cost Adjustments to Rates."
These are pipeline capacity and commodity charges.

Schedule 207 "General Adjustments to Rates."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 210 "Adjustment to Rates for Property Sales."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 212 "Adjustment to Rates Residential Rate Mitigation."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 215 "Adjustment to Rates for Energy Conservation Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 220 "Special Rate Adjustment."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 221 "Rate Adjustment for Updated Depreciation Rates"
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 230 "Temporary Adjustments to Rates for Low-Income Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 231 "Temporary Adjustments to Rates for Residential Discount Program."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 232 "Temporary Adjustments to Rates for Regulatory Fee Increase"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 233 "Temporary Adjustments to Rates for Industrial Customer Energy Efficiency Audit Costs"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 234 "Temporary Adjustments to Rates for Residential Arrearage Management Program" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 235 "Temporary Adjustments to Rates for COVID-19 Public Health Emergency" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

(K)

(K) Schedules 303, 305, 306 and 308 transferred to Sheet 200.3.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment, including but not limited to one or any multiple or combination of the following:

(a) Non-ducted space heating equipment that does not qualify as primary heating systems under Rate Schedule 2, including but not limited to fireplace inserts, free standing gas stoves, and room heaters;
(b) Supplemental or Standby space heating equipment including but not limited to natural gas back-up to electric heat pumps, used in residential applications;
(c) Water heating equipment used to serve single-family residential swimming pools, spas, and hot tubs;
(d) Other equipment including, but not limited to, log lighter, gas log, gas barbecue, tiki torch, Bunsen burner, Domestic cooking equipment, hobby kilns, refrigeration or Domestic clothes drying;
(e) Equipment installed for use in detached garages, shops, or outbuildings.

MONTHLY RATE: Effective: August 1, 2028 (C)
The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

RATE SCHEDULE 2
RESIDENTIAL SALES SERVICE

AVAILABLE:
To Residential Customers, in all territory served by the Company under the Tariff of which this Rate Schedule is a part. Seasonal or temporary Discontinuance of Service is allowed subject to Special Provision 1 of this Rate Schedule. The installation of Distribution Facilities, when required before service can be provided to equipment served under this Rate Schedule, are subject to the provisions of **SCHEDULE E**.

SERVICE DESCRIPTION:
Service under this Rate Schedule is Firm Sales Service to gas-fired equipment used in Residential dwellings that provide complete family living facilities in which the occupant normally cooks, eats, sleeps, and carries on the household operations incident to Domestic life, for at least one of the following purposes:

(a) Operation of ducted forced air Natural Gas space heating equipment that is the primary source for space heating requirements;
(b) Operation of a gas-fired hearth product or wall heater as the primary source for space heating requirements where the hearth or wall heater has a verified nameplate rating of 20,000 BTUs or greater, and is installed in a primary residence defined as a dwelling that is occupied year-round, and where that dwelling is 1,500 square feet or less; and, or;
(c) Operation of fully automatic water heating equipment for primary water heating requirements.

Service under this Rate Schedule includes the use of gas for equipment installed in addition to (a) and (b).

MONTHLY RATE: Effective: August 1, 2028 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate

(a) ***Firm Sales Service.*** Customer Charge
(b) ***Firm Sales Standby Service.*** Customer Charge, plus Standby Service Charge

RATE SCHEDULE 10
CHARGES FOR SPECIAL METERING EQUIPMENT, RENTAL METERS AND METERING SERVICES
(continued)

Metering Services and Charges	One Time Charge	Installation Charge	Monthly Charge	
Rental Read	---	---	$0.36	
Advanced Automated Meter Reading (AAMR) Device[1]	---	$1,270.53	$52.82	(I)
Remote Index	---	$50.00	$4.00	
Pulse Output	---	$100.00	$8.00	
Administrative Set-Up/Consultation Fee (all meters)	$145.00	---	---	(I)
Technical Assistance (Rotary meters only)	$145.00	---	---	(I)

[1] Site specific engineering design costs for AAMR will be added to the installation charge if needed.

SPECIAL PROVISIONS FOR RENTAL METERS AND SPECIAL METERING EQUIPMENT:

1. Prior to receiving service under this section of the Schedule, the Customer must sign a service agreement that requires a minimum 12-month term. Customers who terminate service after less than 12 months will be required to pay all charges otherwise due to fulfill the 12-month obligation under the service agreement.
2. Service under this section of this Schedule is voluntary and separate from billing for or delivery of natural gas to a Customer's premise.
3. Since the Company does not maintain an inventory of all meter types offered under this Schedule, a delay may occur from the time a Customer requests service under this Schedule until the Company can provide it.
4. The Customer will be responsible for the meter pick-up and return of diaphragm meters.
5. The Customer will incur the Administrative Set-Up/Consultation Fee for each rental meter.
6. Upon delivery of a rotary meter, the Customer will incur the Technical Assistance charge listed above for each rental rotary meter. A Customer may not waive this provision or the associated fee. Technical assistance helps the Company ensure proper handling of rotary meters.
7. The Company will install AAMR devices for the charge listed above. AAMR devices will only be installed on Company owned meters and the Company will require that the Customer provide active and continuous electric power per company specifications to enable meter communications.
8. Upon request, the Company will provide one differential test per calendar year on rotary meters. The testing will be scheduled at the Company's convenience.
9. The Customer is responsible to protect all rental equipment from damage including but not limited to installing parking bollards to protect the rental equipment from vehicular or other damage.

(continue to Sheet 110.3)

RATE SCHEDULE 27
RESIDENTIAL HEATING DRY-OUT SERVICE

AVAILABLE:
To Residential home builders, developers, and contractors during the period that a Residential dwelling is under construction, in all territory served by the Company under the Tariff of which this schedule is a part.

SERVICE DESCRIPTION:
Service under this Rate Schedule is restricted to the use of gas in approved permanently-installed gas heating equipment in place during the period the dwelling is under construction. Upon occupancy of the dwelling, service under this Rate Schedule shall terminate automatically. In no event will service under this Rate Schedule continue for more a period of time greater than twelve (12) months from the date the gas meter is set at the dwelling. Upon termination of service under this Rate Schedule, gas service shall transfer to **Schedule 1** or **Schedule 2**, whichever is applicable.

MONTHLY RATE: Effective: August 1, 2028 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to charges for purchased gas costs and technical rate adjustments.

	Base Rate	Pipeline Capacity Rate	Commodity Rate	Temporary Adjustment	Billing Rate
Customer Charge:	$9.00	---	---	---	**$9.00**
Volumetric Charge (per therm)					
All therms	$0.99357	$0.10337	$0.43274	$0.27817	**$1.80785** (I)

Minimum Monthly Bill: Customer Charge, plus charges under **Schedule C** and **Schedule 10** (if applicable)

GENERAL TERMS:
Service under this Rate Schedule is governed by the terms of this Rate Schedule, the General Rules and Regulations contained in this Tariff and by all rules and regulations prescribed by regulatory authorities, as amended from time to time.

RATE SCHEDULE 41
NON-RESIDENTIAL SALES AND TRANSPORTATION SERVICE
(continued)

MONTHLY RATES FOR COMMERCIAL CUSTOMER CLASS: Effective: August 1, 2028 (C)

The rates shown in this Rate Schedule may not always reflect actual billing rates. **SEE SCHEDULE 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

Block 2: Next 20,000 therms	$0.26168			$0.25139	**$0.51307**	
Block 3: Next 20,000 therms	$0.20065			$0.24916	**$0.44981**	
Block 4: Next 100,000 therms	$0.16055			$0.24771	**$0.40826**	
Block 5: Next 600,000 therms	$0.10703			$0.24575	**$0.35278**	
Block 6: All additional therms	$0.04013			$0.24331	**$0.28344**	(I)
Firm Service Distribution Capacity Charge (per therm of MDDV per month):					**$0.15748**	
FIRM TRANSPORTATION SERVICE CHARGES (I42TF) [1]:						
Customer Charge (per month):					**$1,300.00**	
Transportation Charge (per month):					**$250.00**	
Schedule 308 Credits (per bill):				($3,945.77)	**($3,945.77)**	
Volumetric Charges (per therm)						
Block 1: 1st 10,000 therms	$0.25524			$0.25198	**$0.50722**	(I)
Block 2: Next 20,000 therms	$0.22849			$0.25092	**$0.47941**	
Block 3: Next 20,000 therms	$0.17520			$0.24880	**$0.42400**	
Block 4: Next 100,000 therms	$0.14019			$0.24741	**$0.38760**	
Block 5: Next 600,000 therms	$0.09345			$0.24556	**$0.33901**	
Block 6: All additional therms	$0.03504			$0.24323	**$0.27827**	(I)
Firm Service Distribution Capacity Charge (per therm of MDDV per month):					**$0.15748**	

[1] For Firm Transportation Service, the Monthly Bill shall equal the sum of the Customer Charge, plus Transportation Charge, plus the Volumetric Charges, plus the Distribution Capacity Charge, plus any other charges that may apply from Schedule C or Schedule 10.

[2] Where applicable, as set forth in this rate schedule, the Account 191 portion of the Sales Service Temporary Adjustments as set forth in Schedule 201 may also apply.

RATE SCHEDULE 43
HIGH VOLUME NON-RESIDENTIAL
FIRM AND INTERRUPTIBLE TRANSPORTATION SERVICE
(continued)

MONTHLY RATE: Effective: August 1, 2028 (C)

The rates shown below may not always reflect actual billing rates. See **Schedule 200** for a list of applicable adjustments. Rates are subject to changes for purchased gas costs and technical rate adjustments.

FIRM TRANSPORTATION SERVICE CHARGES (C43TF and I43TF)					
					Billing Rates
Customer Charge:					**$38,000.00**
Transportation Charge:					**$250.00**
Volumetric Charge	Base Rate			Total Temporary Adjustment [1]	
Per therm, all therms	$0.00796			$0.24194	**$0.24990** (I)
Firm Service Distribution Capacity Charge: Per therm of MDDV per month					**$0.15748**
Minimum Monthly Bill: Customer Charge, plus Transportation Charge, plus Firm Service Distribution Capacity Charge, plus any other charges that may apply from **Schedule C** and **Schedule 10**.					

INTERRUPTIBLE TRANSPORTATION SERVICE CHARGES (C43TI and I43TI)					
					Billing Rates
Customer Charge:					**$38,000.00**
Transportation Charge:					**$250.00**
Volumetric Charge:	Base Rate			Total Temporary Adjustment [1]	
Per therm, all therms	$0.00796			$0.24194	**$0.24990** (I)
Minimum Monthly Bill: Customer Charge, plus Transportation Charge, plus any other charges that may apply from **Schedule C** and **Schedule 10**.					

[1] Where applicable, as set forth in this rate schedule, the Account 191 portion of the Temporary Adjustments as set forth in Schedule 201 shall apply.

SCHEDULE 200
SUMMARY OF ADJUSTMENTS

Table Code Key:

ADD This adjustment is added to the billing rates at the time the bill is issued.
INC This adjustment is included in the billing rates shown on the Rate Schedule

(continue to Sheet 200.2)

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

The following is a brief description of the applicable Schedules:

Schedule A "Billing for City and County Exactions."
This adjustment will be reflected directly on Customer bills.

Schedule 201 "Temporary (Technical) Adjustments to Rates."
These are temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 203 "Purchased Gas Cost Adjustments to Rates."
These are pipeline capacity and commodity charges.

Schedule 207 "General Adjustments to Rates."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 210 "Adjustment to Rates for Property Sales."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 212 "Adjustment to Rates Residential Rate Mitigation."
These are Temporary Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 215 "Adjustment to Rates for Energy Conservation Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 220 "Special Rate Adjustment."
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 221 "Rate Adjustment for Updated Depreciation Rates"
These are Base Rate Adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 230 "Temporary Adjustments to Rates for Low-Income Programs."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 231 "Temporary Adjustments to Rates for Residential Discount Program."
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 232 "Temporary Adjustments to Rates for Regulatory Fee Increase"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 233 "Temporary Adjustments to Rates for Industrial Customer Energy Efficiency Audit Costs"
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 234 "Temporary Adjustments to Rates for Residential Arrearage Management Program" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 235 "Temporary Adjustments to Rates for COVID-19 Public Health Emergency" (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

(K)

(K) Schedules 303, 305, 306 and 308 transferred to Sheet 200.3.

(continue to Sheet 200.3)

SCHEDULE 200
SUMMARY OF ADJUSTMENTS
(continued)

Schedule 236 "Temporary Adjustments to Rates for Meter Modernization Program." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 237 "Temporary Adjustments to Rates for TSA Operations and Maintenance Costs." (N)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 238 "Adjustments to Rates for Provisional Capital Adjustment." (N)
These are base rate adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 239 "Temporary Adjustments to Rates for TSA Capital and Cost of Service Cost Recovery." (N)
These are base rate adjustments that are included in the Billing Rate reflected on Customer bills. (N)

Schedule 303 "Washington Environmental Cost Recovery Mechanism." (M)
These are temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 305 "Adjustment for Certain Income Taxes (2017 Federal Tax Cuts and Jobs Act)."
These are base and temporary adjustments that are included in the Billing Rate reflected on Customer bills.

Schedule 306 "Multi-Year Rate Plan Adjustment."
These are base rate adjustments that will be added to the Billing Rate on the effective date of the Schedule.

Schedule 308 "Washington Climate Commitment Act Recovery Mechanism."
These are temporary rate adjustments that will be added to the Billing Rate on the effective date of the Schedule. (M)

(M) Schedules 303, 305, 306 and 308 transferred from Sheet 200.2.

SCHEDULE 207
GENERAL RATE ADJUSTMENT

PURPOSE:
To identify the effects of general rate changes approved in the company's most recent general rate case proceeding (Docket UG-200994)

APPLICATION TO RATE SCHEDULES: Effective: August 1, 2028 (C)

Rate Schedule 1	Rate Schedule 3	Rate Schedule 41	Rate Schedule 43
Rate Schedule 2	Rate Schedule 27	Rate Schedule 42	

The Base Rates in the listed Rate Schedules include the adjustment shown below.
NO FURTHER ADJUSTMENT TO RATES IS REQUIRED.

SCHEDULES	BLOCKS	AMOUNT

GENERAL TERMS:
This Schedule is governed by the terms of this Schedule, the General Rules and Regulations contained in this Tariff, any other schedules that by their terms or by the terms of this Schedule apply to service under this Schedule, and by all rules and regulations prescribed by regulatory authorities, as amended from time to time.

(N)

SCHEDULE 237
TEMPORARY ADJUSTMENTS TO RATES FOR TSA OPERATIONS AND MAINTENANCE COSTS

(N)

PURPOSE: To identify adjustments to rates in the Rate Schedules listed below that relate to the amortization of deferred amounts for the start-up Operations and Maintenance costs incurred for compliance with TSA Security Directives, as authorized for deferred accounting by the WUTC in Docket UG-210900.

APPLICABLE:
Schedule 1 Schedule 2 Schedule 3 Schedule 27 Schedule 41 Schedule 42 Schedule 43

APPLICATION TO RATE SCHEDULES: **Effective: August 1, 2028**
The Total Adjustment amount shown below is included in the Temporary Adjustments reflected in the above-listed Rate Schedules. NO ADDITIONAL ADJUSTMENT TO RATES IS REQUIRED.

Schedule	Block	Adjustment (per therm)		Schedule	Block	Adjustment (per therm)
1R		$0.00128		42 CTF	Block 1	$0.00025

I. INTRODUCTION AND SUMMARY

Q. Please state your name and position with Northwest Natural Gas Company ("NW Natural" or "the Company") and summarize your educational background and business experience.

A. My name is Kimberly A. Rush, and I am President of NW Natural. I have worked at NW Natural since 1998 and have had leadership roles related to communications, marketing, and operations with increasing responsibility. I have held my current position since April 1, 2025. Prior to joining NW Natural, I held management and senior communications positions at Alltel Corporation and Bank of America Corporation in Chicago. I received a Bachelor of Arts in Communications from the University of Iowa and a Master of Science in Communications from Northwestern University.

My name is Zachary D. Kravitz. I am the Vice President of Regulatory Affairs and Resource Planning for NW Natural. I joined NW Natural's Legal Department in 2014 as Associate Regulatory Counsel. In 2018, I joined the Rates and Regulatory Affairs Department in the position of Director of Rates & Regulatory Affairs, and later Senior Director. Prior to joining NW Natural, I worked in the energy and utility practice at the law firms of Chester, Wilcox & Saxbe, LLC and Taft, Stettinius & Hollister, LLP in Columbus, Ohio. Before that, I worked at the Ohio Attorney General's Office in the Labor Relations Division. I received a Bachelor of Arts degree in English and Government from the University of Texas at Austin and a Juris Doctor degree from the University of Florida.

Q. What is the purpose of your testimony?

A. Our testimony describes NW Natural's current operating environment, an overview of NW Natural's petition for a general rate revision, and the Company's continued focus on equity and expanding its affordability programs. Finally, we introduce the Company's witnesses and provide a high-level description of their testimony.

II. NW NATURAL'S CURRENT OPERATING ENVIRONMENT

Q. Please describe the business of NW Natural.

A. As the largest standalone gas utility in the Pacific Northwest, NW Natural's employee base of approximately 1,300 dedicated employees provides natural gas service to approximately two million people in more than 140 communities in Oregon and southwest Washington with one of the most modern pipeline systems in the nation. In Washington specifically, NW Natural provides service in 15 cities and neighboring communities in three counties. The Company has approximately 98,000 customer accounts in Washington, which accounts for about 12.2 percent of its total customer base.

Q. Please describe the value that NW Natural provides to its customers.

A. NW Natural provides value to its customers through the delivery of safe, reliable and affordable utility services. NW Natural delivers natural gas to its customers through more than 14,000 miles of transmission and distribution pipelines. In addition, the Company has over 20 billion cubic feet of natural gas storage at its three storage operations, which allows us to reliably and affordably provide energy to its customers on the coldest of winter days.

Q. Please describe the value that NW Natural provides to the Pacific Northwest as a whole.

A. NW Natural plays a vital role in the overall energy system of the Pacific Northwest. In NW Natural's service territory, the gas and electric systems have a concurrent peak in winter. During the January 2024 winter storm event, the Bonneville Power Administration—the Pacific Northwest's largest power supplier—had a modern record peak load of 11,396 MW.[1] NW Natural's combined Washington and Oregon peak gas send out of 407,055 average therms per hour occurred between 10 and 11 am on the same day as Bonneville's peak. NW Natural's peak exceeded that of Bonneville's system, with a peak equivalent to 11,930 MW.

Q. Please provide more detail on the January 2024 winter storm event.

A. As stated above, NW Natural's service territory experienced severe winter weather in mid-January 2024, which demonstrated the capacity, resiliency, and reliability values of the natural gas system. On January 13, 2024, as temperatures dropped to 15 degrees in the Portland-Vancouver area, NW Natural delivered 9 million therms of natural gas to homes and businesses, virtually matching its previous record for a single gas day, and approximately doubling its average daily winter send out. NW Natural delivered approximately 8 million therms of natural gas for each of the following three days. In addition to matching a single gas day delivery record and sustaining high volumes of natural gas delivery to its customers, NW Natural also broke previous Mist Storage

[1] Exh. KAR-ZDK-2.

Facility send out records for five days during this period and delivered over 4.5 million therms of stored natural gas on January 13, 2024.

Q. Did NW Natural's system provide a critical resiliency benefit to communities during this January storm?

A. Yes. During this week-long winter event, icy conditions caused widespread power outages in the communities that also serves in Washington and Oregon, with more than 700,000 electric customers without power for multiple days during freezing temperatures. Clark Public Utilities specifically reported 25,000 customers without power in Washington. However, NW Natural's underground pipeline and storage system was able to perform very well, with only 266 gas customers losing service throughout the entire event systemwide (both Washington and Oregon). Because many natural gas fireplaces, cooktops, and water heaters work in a power outage, as well as gas generators, NW Natural was able to provide energy to our customers and a vital public health alternative for facilities like hospitals, nursing homes and community warming centers.

Q. Is that the only recent winter storm that has demonstrated the reliability and capacity value of NW Natural's system?

A. No. Approximately one year prior, on December 22, 2022, NW Natural's system experienced another extremely cold day where temperatures dropped to 17 degrees resulting in record throughput on its system that would only be matched by the January 2024 weather event discussed above. Both of these recent winter weather events demonstrate the capacity value of NW Natural's system during the coldest winter weather.

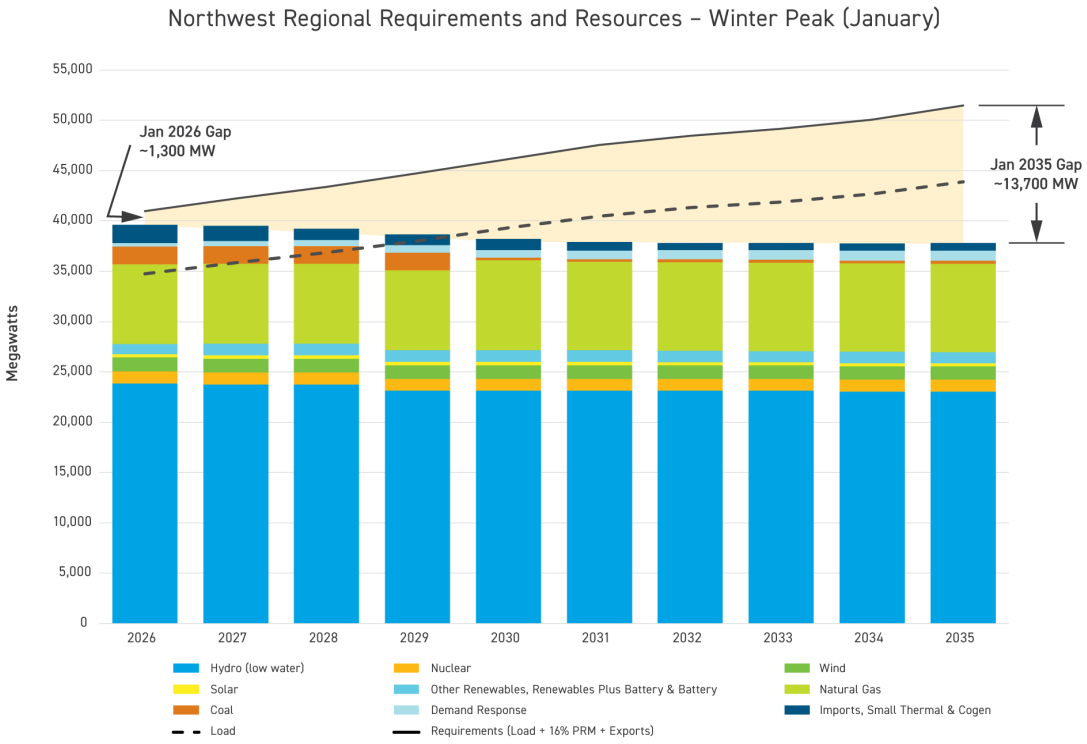
Q. Given record throughput during these severe weather events, is it fair to say that the Pacific Northwest's reliance on NW Natural's capacity is increasing?

A. Yes. These severe winter storm events illustrate how important NW Natural's system is to both its customers and the Pacific Northwest as a whole. During the severe weather events in both winters, NW Natural reliably met its customers' needs to heat their homes and their businesses despite record setting demand. In addition, the capacity provided by NW Natural is critical to ensuring that the Pacific Northwest's overall energy system remains reliable, resilient, and affordable. On the coldest winter days, NW Natural's system meets 90 percent of the energy needs for its residential space and water heat customers.

This amount of capacity would be extremely difficult and expensive to replace with electric solutions given the limitations already facing the Pacific Northwest's power system. According to the Pacific Northwest Utilities Conference Committee ("PNUCC") annual power loads and resource study, the Pacific Northwest is facing winter peak power deficits throughout the next decade that increase to approximately 13,700 MW in 2035, as shown in Figure 1 below:[2]

[2] PNUCC, Northwest Regional Forecast of Power Loads and Resources – August 2025 through July 2035 at 23, Table 3 (Apr. 2025) (available at: https://www.pnucc.org/wp-content/uploads/2025-PNUCC-Northwest-Regional-Forecast-final.pdf).

Figure 1



Source: PNUCC 2025 Northwest Regional Forecast

Aside from the resource adequacy issues that would further be exacerbated by seeking to replace the capacity that the Company provides with electricity, NW Natural also serves commercial and industrial customers whose use of natural gas simply cannot be electrified at any price given current technology.

Q. Has PNUCC recently commissioned an analysis of regional energy studies that further analyzed increasing energy demand and the frequency of extreme weather events?

A. Yes. PNUCC and the Northwest Gas Association ("NWGA") hired a consultant—Guidehouse—to conduct a literature review that analyzed 19 studies published by gas and electric organizations to identify common themes and risks associated with rising

energy demand and the increasing frequency of extreme weather events in the Pacific Northwest and the broader western United States.[3] The PNUCC and NWGA working group included representatives from a number of utilities and pipeline operators in the United States and Canada, including Clark Public Utilities, Avista, Puget Sound Energy, Cascade Natural Gas, Portland General Electric, PNGC Power, Eugene Water and Electric Board, NW Natural, FortisBC, Enbridge, and Williams NW Pipeline.[4]

Guidehouse's analysis found that the Pacific Northwest electricity demand is forecasted to increase by over 30 percent in the next ten years.[5] It also shows the magnitude and frequency of demand at-risk hours significantly increase from 2026 onward, indicating a shortfall in resource plans.[6] At the same time, hydroelectricity may become increasingly unreliable due to droughts. These conditions will continue to stress not only the electric grid in the region, but also the interstate pipeline system. Driven by an increase in gas-fired electric generation, the average utilization of interstate pipelines in Washington, and the entire Pacific Northwest, has exceeded 95 percent in recent years and its use is expected to grow, even during normal winters.[7]

[4] Exh. KAR-ZDK-3.

[5] Exh. KAR-ZDK-3.

[6] Exh. KAR-ZDK-3.

[7] Exh. KAR-ZDK-3.

Q. Did Guidehouse make any recommendations to combat these resource adequacy issues?

A. Yes. Instead of looking at energy policy as a zero-sum game where natural gas utilities play less and less of a role in favor of massive load growth on the electric system, Guidehouse recommends "enhanced planning coordination between gas and electric systems" in order to "prepare for these changes to the system," such as increased demand and increasing stress on existing resources that we described above.[8] Specifically, Guidehouse's analysis states that electric and gas utilities should collaboratively develop planning tools and models that co-optimize both the natural gas and electric systems.[9] We believe that these types of joint planning solutions can address resource adequacy while still helping the Pacific Northwest achieve its emissions reductions goals as affordably as possible.

Q. How does this type of joint system planning advance equity?

A. Joint system planning is an example of equity in action. Broadly speaking, joint system planning, if done correctly, can help facilitate a fair and just allocation of benefits and burdens to a less emissions-intensive energy system. By working together, natural gas and electric utilities can take advantage of the strengths of their respective systems to lower overall costs, promote resource adequacy, and reduce emissions. By increasing the benefits and reducing the burdens related to emissions reductions, it is possible to craft more equitable results. While achieving resource adequacy and emissions

[8] Exh. KAR-ZDK-3.

[9] Exh. KAR-ZDK-3.

reductions at an affordable cost is an incredibly difficult problem, joint system planning places the overall energy system in the best position to maximize benefits and minimize burdens to all Washingtonians regardless of the fuel that they choose to use to heat their homes.

Q. How can the electric and natural gas systems work together to take advantage of the strengths of their respective systems to lower overall costs, promote resource adequacy, and reduce emissions?

A. Dual-fuel solutions are a way for electric and natural gas systems to work together to lower overall costs, promote resource adequacy, and reduce emissions. In particular, we believe that hybrid heating, where an air source heat pump is paired with a gas furnace, could reduce natural gas throughput, as well as address continuing resource adequacy and reliability concerns on the electric grid. Today, air source heat pumps typically utilize electric resistance heating as a back-up and they are less energy efficient during periods of cold weather than during periods of milder weather. Utilizing a natural gas furnace instead eliminates the need to rely on higher emitting and more costly electric resistance back up heat, especially during prolonged cold weather where renewable electric power is limited due to a lack of sun and wind. These types of solutions offer the promise to lower the cost of meeting climate targets for the electric and gas system, while also preserving reliability and optionality.

Q. Is NW Natural currently pursuing a dual fuel (or "hybrid") pilot?

A. Yes. The Clark County Dual Fuel Pilot is being managed and delivered in partnership with the Northwest Energy Efficiency Alliance and the local electric utility—Clark Public Utilities. This pilot is examining a hybrid application where an air-source heat

pump is combined with an air handling unit and tankless gas water heater. The system is controlled with an iFlow Smart Controller that allows the heat pump and gas water heater to operate in parallel. Fifteen homes have been selected for this pilot. The research objectives for this pilot are to evaluate the overall heating and water heating efficiency of this specific system along with the functionality of the iFlow Smart Controller. In addition to the efficiency research, demand response scenarios will also be performed on the systems. Final installations are currently underway.

NW Natural believes this pilot has the potential to lead to solutions that can help promote equitable outcomes in energy system planning, ensure resource adequacy while reducing emissions as affordably as possible. However, it may also eventually lead to an evolution of the regulatory model and incentives to properly support dual-fuel (hybrid) solutions, although—to be clear—NW Natural is not seeking any such changes in this proceeding.

Q. Is NW Natural working with a local electric utility on any other innovative pilot projects that will reduce emissions?

A. Yes. In coordination with Clark Public Utilities, NW Natural is developing a thermal energy network ("TEN") pilot[10] in downtown Vancouver, as fully described in the confidential Direct Testimony of Holly J. Braun (Exh. HJB-1CT). The TEN system is designed to achieve a maximum coefficient of performance ("COP") of approximately 6.0, which significantly outperforms conventional air source heat pumps. This higher

[10] A TEN connects multiple buildings through a loop of underground pipes carrying water. This water exchanges heat with the earth through geothermal boreholes or wells. Each building connects to the TEN using a ground source heat pump, which provides heating, cooling, and hot water. Recent changes in state law (HB 2131) have facilitated the development of TEN pilot projects by natural gas companies.

performance translates into greater system-level energy efficiency. Also, unlike air source heat pumps, TENs' efficiency and effectiveness does not depend on air temperatures that rise and fall dramatically with the seasons. In its letter of support for the project, Clark Public Utilities states that it has "concluded [that] TEN projects have potential to provide capacity value to the electric utility; when measured against the baseline technologies that would be providing space and water conditioning, a TEN achieves much lower peak demand during both the summer and winter seasons."[11]

As both the dual fuel and the TENs pilots show, NW Natural is eager to collaborate with local electric utilities, such as Clark Public Utilities, to continue to develop these innovative solutions to the pressing issues that all regional energy utilities face regardless of whether they are natural gas or electric, consumer or investor owned.

III. NW NATURAL'S APPLICATION FOR GENERAL RATE REVISION

A. Overview of Multi-Year Rate Plan ("MYRP")

Q. Please summarize the Company's proposed multi-year rate plan.

A. NW Natural is filing its first general rate case under Washington's MYRP statute, RCW 80.28.425(1), which became effective on January 1, 2022. NW Natural is proposing a three-year rate plan with the first year rate effective date of August 1, 2026. Specifically, rate year one ("RY1") covers August 1, 2026 through July 31, 2027, rate year two ("RY2") covers August 1, 2027 through July 31, 2028, and rate year three ("RY3") covers August 1, 2028 through July 31, 2029.

[11] Exh. HJB-4.

NW Natural is proposing to increase revenues from base rates by $25.6 million in RY1, which is a 22.8 percent increase in revenues. For RY2 and RY3, the Company proposes an additional increase in base rates of $8.6 million and $8.3 million, respectively. This would be an additional increase of 6.2 percent in RY2 and 5.7 percent in RY3. NW Natural is also seeking to amortize: 1) its Transportation Security Administration ("TSA") Security Directive 2 deferral, 2) its COVID-19 deferral, and 3) its meter modernization deferral. To limit the size of the RY1 and RY2 rate increase, NW Natural is proposing to amortize the TSA Security Directive 2 deferral over a three-period beginning in RY3. NW Natural is also proposing to amortize the COVID-19 and meter modernization deferral over the three-year MYRP to limit the size of the rate increases in the MYRP.

The requested increase in base rates includes a capital structure of 51 percent common equity, 48 percent long-term debt, and 1 percent short-term debt with a requested 10.1 percent return on equity ("ROE") in RY1, increasing to 10.2 percent in RY2 and RY3, resulting in an overall rate of return ("ROR") on rate base of 7.505 percent in RY1, 7.623 percent in RY2, and 7.661 percent RY3.[12]

Q. Without this rate relief, what is the financial impact to NW Natural?

A. Without the requested increase in base rates, NW Natural's gas distribution utility would expect the overall ROR to be 1.86 percent, with a corresponding ROE of -0.95 percent in RY1, well below the proposed ROR and ROE in this case of 7.51 percent and 10.1 percent, respectively.[13] The Company, therefore, needs to increase its rates

[12] *See* Exh. BJW-1CT, Table 1. The slightly higher ROR in RY3 is due to a higher cost of debt in that year.

[13] *See* Exh. KTW-2.

in order to maintain an ability to recover its costs and earn a reasonable return that will allow it to attract the capital that is required to safely and reliably run its utility system for the benefit of its customers.

B. Considerations in Developing the MYRP

Q. Please comment on the considerations NW Natural undertook before filing its MYRP.

A. As described above, NW Natural is committed to customer satisfaction and providing natural gas service at reasonable rates for customers. NW Natural understands that natural gas plays a vital role in its customers' lives, and the Company does not take lightly the prospect of this magnitude of rate increase in RY1. These rate increases cause customers concern, and any significant increase in overall rates can present a financial hardship for some of NW Natural's customers. We recognize that not all households and businesses have natural gas service, and they have other options for serving their energy needs. This means that, even as a regulated utility, NW Natural competes for business with other energy providers, and therefore is always motivated to keep natural gas rates as low as possible while still being able to provide excellent customer service, exceed safety standards, and maintain financial integrity as a Company. NW Natural determined, however, that after five years of managing the Company without a general rate request, NW Natural would file this MYRP with the Commission seeking to revise its rates to recognize an increased revenue requirement related to its provision of utility service.

Q. Has NW Natural taken any specific steps to mitigate the size of the rate increase?

A. Yes. NW Natural has taken several steps to mitigate the size of the rate increase. First, NW Natural is not seeking recovery of provisional capital in RY1. Specifically, to calculate RY1 rates, the Company used plant balances as of July 31, 2026, as opposed to also including investments that will enter service during RY1. By not including these investments, NW Natural is limiting the size of the RY1 increase. In addition, NW Natural is not proposing to include the reasonable cost of construction work in progress in valuing its plant, although the Commission has the discretion to include such costs under RCW 80.04.250(2).

Second, NW Natural is not seeking to recover the long-term portion of the Company's executive compensation program that applies to officers, high-performing managers, and key employees. The Company is also proposing to hold all incentive pay flat over the course of the MYRP, even though inflation will cause these costs to increase over the term of the three-year MYRP.[14]

Third, while the Company's actual capital structure has a 52 percent equity layer as of June 30, 2025, it is requesting a 51 percent equity layer in its MYRP to also help mitigate the size of the rate increase. By doing so, NW Natural is seeking to balance near-term rate impacts with its commitment to a strong and stable balance sheet that helps maintain its current credit ratings.

[14] *See* Exh. JEN-1T ("[I]nflation is expected to remain markedly above levels experienced prior to the COVID-19 pandemic").

Fourth, NW Natural is not seeking to increase the amount of renewable natural gas ("RNG") it purchases to serve Washington customers in its upcoming Purchased Gas Adjustment ("PGA") proceeding this year. Although these RNG costs are recovered through the PGA (not general rate cases), they nonetheless are a part of customers' bills. By holding the amount of RNG steady, the Company is balancing near-term rate increases with the purchase of decarbonized fuels that are more expensive than conventional natural gas.

Fifth, as part of this proceeding, NW Natural is seeking to revise its depreciation rates to better reflect the depreciable lives of the Company's plant. As explained in the Direct Testimony of John J. Spanos (Exh. JJS-1T), these revised depreciation rates increase depreciation expense. To mitigate the size of the RY1 and RY2 increase, NW Natural proposes to incorporate these revised depreciation rates into RY3 rates, which reduces rate pressure in RY1 and RY2.

Sixth, as stated above, NW Natural is seeking to amortize several deferrals in a way that limits their immediate rate impact. For example, NW Natural is proposing to not begin amortizing the TSA Security Directive 2 deferral until RY3, and it is seeking to amortize several other deferrals over the course of the MYRP, limiting the size of annual rate increases in the MYRP.

Q. Despite the steps it has taken to mitigate the size of the rate increases over the course of the MYRP, NW Natural is still proposing a three-year rate plan. How do the rate increases in the rate plan compare to the average residential bill that customers have paid since the rate effective date of its last general rate case (November 1, 2022)?[15]

A. Although NW Natural acknowledges it is seeking rate increases over the course of the MYRP, it nonetheless results in existing residential customers' average RY1 bills being nearly the same as they were throughout most of 2024.[16] Since the rate effective date of NW Natural's last general rate case (November 1, 2022), customers' bills have fluctuated due to the PGA and the implementation of the Climate Commitment Act ("CCA").[17]

The effect of changing commodity costs for the price of natural gas is well established. It can lead to bill increases or decreases through the annual PGA. However, the effect of the CCA, especially its initial implementation, is new. The CCA caps and reduces the State's greenhouse gas emissions over time. Beginning in 2023, the CCA requires the State's industries, including NW Natural, to obtain allowances equal to the greenhouse gas emissions attributed to them and then submit those

[15] NW Natural filed its last general case before the current version of RCW 80.28.425(1) took effect and, therefore, it was not a MYRP under that statute. However, the Company's last rate case did result in the Commission approving rate changes that took effect on November 1, 2021 and November 1, 2022 respectively. See *Wash. Util Comm'n v. N.W. Natural Gas Co*., Dockets UG-200994, UG-200995, UG-210085 (consolidated), Order 05 (Oct. 21, 2021).

[16] As explained below, "existing customers" are defined under the Climate Commitment Act ("CCA") as those customers whose premises that were receiving natural gas service as of July 25, 2021. The overwhelming majority of NW Natural's residential customers are existing customers.

[17] RCW 70A.65 et seq.

allowances to the Department of Ecology. Under the CCA, those premises that were receiving natural gas service as of July 25, 2021 ("existing customers") receive a credit to mitigate some CCA costs, whereas premises that began receiving natural gas service after that date do not ("new customers").[18] Importantly, however, low-income customers, regardless of when their premises began receiving natural gas service, are held harmless from CCA charges.[19]

Existing customers saw a temporary increase in their average monthly bill due to the initial implementation of the CCA beginning on January 1, 2024, when NW Natural began recovering the CCA allowance costs it had already incurred in 2023 and that it was forecasted to incur in 2024.[20] Beginning on January 1, 2025, however, the average customer existing bill has declined due to NW Natural only recovering the cost of CCA allowances it has forecast for the upcoming year, as well as a decline in commodity costs.

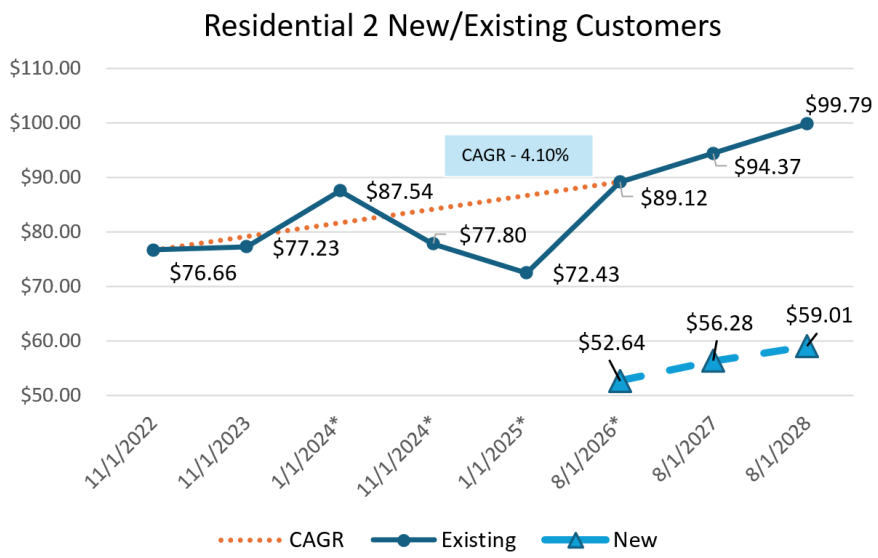
Figure 2 below shows the average existing residential customer monthly bill since November 1, 2022 under Rate Schedule 2, Residential Sales Service, which illustrates these changes.

[18] RCW 70A.65.130(2)(c).

[19] RCW 70A.65.130(2)(b-c). See also the Company's Schedule 308, Washington CCA Cost Recovery Mechanism, ("Low Income customers are held harmless and will see a [CCA] charge and offsetting credit on their bill.").

[20] Again, low-income customers do not pay CCA costs, so their bills would not have increased due to CCA.

Figure 2



As shown in Figure 2 above, beginning on January 1, 2024, the average existing residential customer's bill increased from $76.66 per month to $87.54 per month as NW Natural recovered the CCA allowance costs. With the proposed RY1 rate increase, the average customer bill would increase to $89.12 per month, only slightly higher than what the average residential bill was throughout most of 2024. After incorporating the proposed RY1 increase, the Compound Annual Growth Rate ("CAGR") would be 4.10 percent since the rate effective date of NW Natural's last general rate case.

Despite new customers not receiving credits to mitigate CCA costs, the average new customer bill is projected to be substantially lower than the average existing customer bill because these new customers use substantially less gas than existing customers. Over the course of the MYRP, NW Natural projects that the average new

customer will use 27.8 therms per year, whereas an existing customer will use 55.2 therms per year.[21]

Q. Is NW Natural taking steps to limit the volatility in customer bills that occurred between 2023 and 2025?

A. Yes. NW Natural is filing a three-year rate plan to help smooth the rate impacts after RY1. Also, as explained above, NW Natural is currently recovering the cost of CCA allowances on regular annual cadence, whose initial implementation led to a relatively substantial rate increase in 2024 as explained above.

Q. How does the average RY1 monthly residential bill compare to the average monthly residential bill historically?

A. For existing customers, which makes up the overwhelming majority of NW Natural's customer base,[22] the RY1 monthly residential bill is $89.12. This bill is only slightly more than the 2008-09 average monthly residential customer bill of $82.49 without taking inflation into account.[23] After taking inflation into account, the average monthly residential bill for existing customers is approximately 27.80 percent less than it was in 2008-09. To be clear, these figures are not a rationale for the proposed rate increases in this MYRP, but we point this out because it provides relevant context when evaluating the impact on customers of this request. Moreover, these figures do not

[21] NW Natural has not calculated the use-per-customer for new customers prior to the MYRP and, therefore, did not compare new customers' residential bills over this time period.

[22] In other words, most of the premises served by NW Natural were receiving natural gas service as of July 25, 2021, which is the date that separates existing customers from new customers. See RCW 70A.65.130(2)(c).

[23] Specifically from November 1, 2008 to October 31, 2009.

account for NW Natural's Bill Discount Program ("BDP"), which has reduced monthly bills for participating low-income residential customers well below 2008-09 levels.

Q. Please explain how the BDP has reduced participating low-income residential customers' bills well below 2008-09 levels.

A. In RY1, the average monthly low-income residential customer bill is $83.23 before applying the BDP.[24] The average low-income residential bill is lower than the average monthly bill for existing customers ($89.12) because low-income residential customers are held harmless from CCA costs. After applying the BDP, low-income customers' bills are dramatically lower than they were in 2008-09, as shown in Figure 3 below.

Figure 3

Comparison of Average RY1 BDP Bill to Average 2008-09 Residential Bill ($82.49)

BDP Tier Level	BDP Discount of Total Bill	Average RY1 Monthly Bill Under BDP	RY1 BDP Monthly Bill Compared to Average 2008-09 Bill
Tier 0 0-60% FPL	80%	$16.65	-80%
Tier 1 61-120% FPL	40%	$49.94	-39%
Tier 2 121-150% FPL	20%	$66.58	-19%
Tier 3 Greater of 151-200% FPL or 80% AMI	15%	$70.74	-14%

[24] To calculate the average bill, NW Natural utilized the same use-per-customer as existing customers (55.2 therms per year).

These figures are not adjusted for inflation. If they were, the average RY1 low-income residential customer monthly bill would be even lower compared to 2008-09.

Again, these comparisons to both recent and historical residential bills do not provide a rationale for the proposed rate increases in this MYRP. However, they do provide relevant context when evaluating the impact of the Company's rate request in this proceeding.

C. Drivers of the MYRP

Q. What are the significant drivers for the MYRP?

A. There are five significant factors that are driving the need to file this MYRP:

- Investments in storage facility and distribution system projects to ensure continued safe and reliable operations.
- The TEN pilot project.
- The Meter Modernization Program.
- Replacement of end-of-life information technology and services ("IT&S") systems.
- Escalating costs due to inflation.

Q. Before describing NW Natural's investments in storage facility and distribution system projects, please summarize the changes that NW Natural has recently made to its distribution system planning.

A. As a result of implementing the Customer Management Module ("CMM") modeling in 2022, NW Natural can now model future distribution system needs with a longer lead time. CMM more accurately models local system pressures by using individual historical customer usage, rather than local average customer usages. Utilizing CMM

gives the Company additional time to study demand side management alternatives that can cost-effectively avoid or delay a system reinforcement project. CMM has already identified areas of the system where NW Natural can pursue these opportunities. However, it has also identified areas of the Company's system in near-term need of reinforcement. With the implementation of CMM, NW Natural is also expanding its suite of non-pipeline solutions such as Geographically Targeted Energy Efficiency (GeoTEE) and Geographically Targeted Demand Response (GeoDR). In addition, NW Natural is studying whether CNG or LNG trucking may be a viable alternative to a pipeline solution for a peak weather event in certain circumstances.

Despite the potential of non-pipeline solutions, NW Natural must nonetheless continue to make improvements to its distribution system in order to keep its system safe, reliable, and economical, especially in areas of its system that are already constrained. Non-pipeline solutions typically require longer lead-times than pipeline solutions. However, as NW Natural moves away from distribution system planning on a just-in-time basis where traditional pipeline solutions were not developed until areas of the system became constrained, the Company expects non-pipeline alternatives to play a greater role in the planning process. That said, non-pipeline solutions will not be able to satisfy every system need NW Natural has.

Q. Is NW Natural moving forward with a reinforcement project in this case?

A. Yes, the Vancouver Reinforcement Project is necessary to maintain adequate pressure on NW Natural's high pressure distribution system in Clark County during a peak cold weather event. NW Natural first identified this constraint utilizing its CMM modeling. CMM revealed that NW Natural's distribution pressures for the design cold weather

planning event would not be adequate. Subsequent measurements and monitoring of real-world experience during cold weather events demonstrate that pressure on the distribution system has fallen below our standards, and the Company needs to take action to address this constraint.

NW Natural is currently evaluating both pipeline and non-pipeline solutions. The pipeline solution would involve constructing approximately 2.5 miles of 12-inch gas main to reinforce a segment of 4-inch main near Lacamas Lake in the east Vancouver area. NW Natural is also considering uprating the operating pressure of the 250 MAOP high pressure distribution system to 300 MAOP or injecting gas from CNG or LNG trailers cited on a parcel of land in the east Vancouver area during peak cold weather events. NW Natural is completing its final alternatives analysis. The Company conservatively expects to complete the project by December 2028, although it is also evaluating whether the project can be completed in 2027 given the low pressures in the system that are currently being recorded during cold weather events.

The Direct Testimony of Daniel B. Kizer, Senior Director of Engineering, and Scott S. Johnson, Senior Director of Gas Supply, (Exh. DBK-SSJ-1T) further explains NW Natural's distribution system planning changes.

Q. Please summarize the storage facility and distribution system projects that are included in this case.

A. As fully explained in the Direct Testimony of Daniel B. Kizer and Scott S. Johnson (Exh. DBK-SSJ-1T), NW Natural has included a number of storage facility and distribution system projects in this case. Each of them is necessary to ensure that NW Natural continues to provide safe reliable service. Of these projects, the two most

significant are the replacement of end-of-life compressors at NW Natural's Mist Storage Facility and the Vancouver Reinforcement Project.

Q. Please describe the compressor replacement project at the Mist Storage Facility.

A. At the Mist Storage Facility, natural gas can be stored indefinitely and dispatched over the entire winter season including sustained multi-day cold stretches. NW Natural's access to the Mist Storage Facility, its liquified natural gas ("LNG") storage facilities in Portland and Newport, Oregon, and its contract for storage service at Jackson Prairie near Centralia, gives the Company the ability to store natural gas for use during the coldest days of the year irrespective of increased demand during that time of year.

NW Natural has also already developed additional capacity at the Mist Storage Facility in advance of utility customer need. This capacity currently serves the interstate/intrastate storage market but can be recalled for service to NW Natural's utility customers at its depreciated value, providing real-time access to incremental capacity at a low cost. The Mist Storage Facility is ideally located in NW Natural's service territory, eliminating the need for upstream interstate pipeline transportation service to deliver the gas during the heating season. NW Natural has recalled an incremental 20,000 Dth/day of Mist deliverability to meet this demand beginning November 1, 2024, and expects additional recalls to meet demand in the future.

Therefore, the Mist Storage Facility is a significant portion of NW Natural's firm resource stack. However, the facility depends on the GC500 and GC600 compressors to provide operating compression so that NW Natural can utilize it to meet winter demand, and both compressors have exceeded their useful lives and require ongoing "break-fix" repairs that routinely disrupt the operations at Mist. To ensure the

continued reliability of the Mist Storage Facility, the Company will replace the GC500 unit first, by October 2025, because it is the oldest unit (installed in 1998). NW Natural will use the GC600 unit to support injection operations during the replacement period. NW Natural plans to replace the GC600 compressor (installed in 2001-02) by October 2026. Replacing both compressors is vital to ensure the future reliability of the Mist Storage Facility.

Q. Please briefly summarize the TENs pilot project.

A. As mentioned above, NW Natural is pursuing a TENs pilot project in downtown Vancouver. As designed, the pilot will deliver thermal service to an estimated 430 new market-rate multifamily units, 36,800 square feet of retail commercial space, and Vancouver's City Hall. These buildings, located within a couple of city blocks, represent a cross-section of residential, commercial, and public-sector customers, enabling the pilot to test and refine a scalable service model across multiple customer classes. NW Natural currently estimates that the Vancouver TEN pilot project will cost approximately $12.8 million in total, but the Company anticipates that investment tax credits and incentives will reduce that cost to $9.2 million. NW Natural is also seeking a grant from the Washington State Department of Commerce that will further reduce the costs that customers would pay for this project. The confidential Direct Testimony of Holly J. Braun (Exh. HJB-1CT) discusses the TENs pilot project in detail.

Q. Please briefly explain the Company's Meter Modernization Program.

A. The Meter Modernization Program is a four-year program that began in 2024 and will continue through 2027. It is an ongoing Company initiative that focuses on the replacement of a large portion of NW Natural's metering assets due to aging batteries

inside the communication devices (encoder receiver transmitters, or "ERTs") attached to its meters. Without functioning ERTs, NW Natural cannot bill its customers. Additionally, the Meter Modernization Program will maximize cost-efficiency by combining ERT replacement with the replacement of meters that are out of compliance with applicable standards. The Direct Testimony of Joe S. Karney (Exh. JSK-1T) further explains the Meter Modernization Program.

Q. Please discuss the Company's plans to update its IT&S infrastructure.

A. NW Natural is seeking cost recovery of essential projects that are necessary to ensure the continued functionality of its IT&S infrastructure. Specifically, NW Natural is continuing its multi-year program to phase out end-of-life field and web mapping software and transition to a consolidated set of modern software solutions, as well as improving its Field Workforce Management tools that are necessary to schedule, dispatch, and route NW Natural personnel in the field. Ongoing work is also necessary to improve its Identity Governance and Administration (IGA), which is the process of granting, updating, reviewing and revoking access to technology systems for NW Natural employees and contractors, based on job changes or other Company needs. In addition, NW Natural is pursuing customer self-service enhancements to help customers manage their accounts more easily through the web-based and phone systems.

Further, NW Natural is maintaining and upgrading its IT&S infrastructure. These efforts include: 1) refreshing the physical infrastructure necessary to enable the Company's IT&S, including microwave towers, voice radio, and telemetry equipment, 2) replacing the Company's aging, custom-built supervisory control and data

acquisition ("SCADA") platform with a modern, modular, and secure SCADA platform to control and monitor the Company's distributed pipeline infrastructure, 3) updating and maintaining critical IT&S applications and platforms through its Application Lifecycle Management (ALM) initiative, and 4) ensuring continued back office functionality, including financial reporting software, billing systems, risk analytic tools, and report generation functions.

The confidential Direct Testimony of Brian E. Fellon (Exh. BEF-1CT), the Company's Vice President and Chief Information Officer, provides a comprehensive explanation of the Company's IT&S projects, including those mentioned above.

Q. Please describe how operations and maintenance costs have escalated since NW Natural's last rate case.

A. Since the rate effective date of NW Natural's last general rate case that adjusted operations and maintenance costs (November 1, 2021),[25] inflation has increased NW Natural's operations and maintenance costs substantially. The Direct Testimony of Jennifer E. Nelson (Exh. JEN-1T) explains that when the U.S. economy opened from the COVID-19 lockdowns, economic activity quickly rebounded, causing inflation to reach the highest levels seen in the last 40 years. Seasonally adjusted inflation has increased 16.3 percent between October 2021 when the Commission's decision in the Company's last rate case was issued and June 2025.[26] NW Natural is unable to

[25] The rate change that took effect on November 1, 2022, did not adjust the Company's operations and maintenance costs.

[26] Exh. JEN-1T.

continue to absorb these increasing costs, which is a major driver of NW Natural's MYRP.

Q. Given all of the considerations and cost drivers explained above, please briefly explain why NW Natural is proposing its MYRP.

A. NW Natural recognizes that its proposed RY1 increase is significant. However, at its core, this rate case is about recovering the costs of NW Natural's investments to continue to support its utility service to customers, as well as recovering escalating costs since the Company's last general rate case. NW Natural understands that natural gas has an essential role in our customers' lives, and we do not take lightly the prospect of increasing our customers' rates.

After five years without a general rate case, the Company nonetheless determined that NW Natural would need to file this MYRP with the Commission seeking to revise its rates to recognize an increased revenue requirement related to its provision of utility service. As we have stated above, without the requested increase in base rates, NW Natural's gas distribution utility would expect the overall ROR to be 1.86 percent, with a corresponding ROE of -0.95 percent in RY1, well below the proposed ROR and ROE in this case of 7.51 percent and 10.1 percent, respectively. Therefore, the MYRP is necessary for the Company to recover its costs and have the opportunity to earn a reasonable return that attracts capital that is necessary to maintain safe and reliable service for its customers.

IV. ENERGY EQUITY AND AFFORDABILITY

Q. Please briefly summarize NW Natural's primary energy equity and affordability initiatives.

A. NW Natural continues to strengthen considerations of energy equity and affordability into its day-to-day operations and program offerings to customers. First, participation in its BDP is continuing to grow. Second, working with a third-party consultant, the Company has also completed its second Energy Burden Assessment ("EBA") that analyzed energy burden in its service territory. Third, NW Natural has recently expanded its Washington Low-Income Energy Efficiency ("WALIEE") program. Finally, the Company has have made enhancements to several other energy affordability and equity programs as well. The Direct Testimony of Cecelia J. Tanaka (Exh. CJT-1T) fully discusses the Company's energy equity programs and initiatives, but we will briefly touch on each here.

Q. Please briefly explain NW Natural's BDP, including how the Company is conducting outreach to expand participation.

A. On January 1, 2024, NW Natural began offering its BDP to income-eligible customers. The BDP offers three tiers of discounts ranging from 15 percent to 80 percent depending on household income. In the first 17 months of its Washington program, roughly 9,000 customers enrolled, representing half of the Company's estimated income-eligible population in its service territory. Customers who have received energy assistance or weatherization services within the last two years are automatically enrolled in the BDP. NW Natural also works with community partners throughout its service territory, such as community action agencies, school systems, housing

networks, places of worship, food banks, culturally specific organizations, and healthcare networks, to increase enrollment in its BDP.

In addition, NW Natural's community partners utilize a wide variety of communication channels including check-in calls with homebound seniors, inserts in food boxes at schools and food pantries, direct mail, community newsletters, and social media posts. Leveraging these relationships and networks is particularly valuable, enabling the Company to reach customers who might otherwise be inaccessible to deliver BDP information through other important and trusted sources.

NW Natural continues to take direct action to increase BDP participation as well, such as a direct mail campaign to over 3,600 Washington customers who have been identified through its EBA as likely eligible and energy burdened but not participating in the BDP.

The Company also hosted a Winter Preparedness Fair in November 2024 that offered weatherization kits, a vaccine clinic, winter coats for kids, food boxes, and a BDP sign-up station covering several utilities and services for income-eligible households—all at no cost to the customer. NW Natural continues to participate in other community forums to increase BDP participation, such as hosting a table at Clark Public Utilities' Race for Warmth and sponsoring the Clark County Fire Department #6 Open House on June 7, 2025, where the Company hosted three tables on safety and preparedness, resource planning, and ways to reduce bills through energy efficiency, weatherization, and bill discount offerings.

Q. Did NW Natural re-examine its BDP discount tiers due to its proposed RY1 rate increase?

A. Yes. NW Natural re-examined its BDP discount tiers due to its proposed RY1 rate increase. Applying an illustrative 25 percent increase (which is greater than the proposed RY1 rate increase) to the existing BDP discount tiers results in a natural gas energy burden between 1.2 and 2.1 percent, depending on the BDP tier. Specifically, customers receiving a 15 percent discount (Tier 3) would have an energy burden associated with their natural gas bill of approximately 1.2 percent. Customers receiving a 20 discount (Tier 2) would have a natural gas energy burden of approximately 1.9 percent. Those customers receiving a 40 percent discount (Tier 1) and an 80 percent discount (Tier 0) would each have a natural gas energy burden of 2.1 percent. Since a household is considered energy burdened if it spends more than 6 percent of their income on energy costs (or 2 percent on just gas per the EBA), NW Natural is not proposing any changes to the BDP discount tiers.[27]

The BDP, including NW Natural's outreach to increase participation in its BDP and its evaluation of the program to date, is fully explained in the Direct Testimony of Cecelia J. Tanaka (Exh. CJT-1T).

Q. Please summarize the key findings of the Company's EBA.

A. Specific to Washington, the EBA found that about 23 percent of its residential customers meet low-income guidelines, nearly double that of its Oregon customer base. This greater number is because the Washington BDP has a higher income threshold

[27] See Exh. CJT-1T for additional details regarding energy burden and how it is calculated.

than Oregon's BDP. In Washington, the income threshold is the greater of 80 percent of the area median income or 200 percent of the federal poverty line, meaning that it is about $25,000 higher than Oregon's threshold (60 percent of state median income). For a family of four, households that earn up to $94,400 are eligible for some level of discount. The same household would be required to earn just under $71,000 to be eligible for the bill discount program in Oregon.

The EBA also found that the BDP is targeting customers most in need, evidenced by the highest participation rates in the lowest income tier where customers obtain an 80 percent discount from their bills.

Q. How has NW Natural used the EBA information?

A. Although the EBA revealed healthy participation in the BDP, it also identified pockets of need and opportunities for further outreach. Based on these findings, NW Natural launched the direct mail campaign that we referenced above to increase participation in the BDP. This campaign was specifically targeted at customers who were identified through the EBA as likely eligible for the BDP. The Company's outreach to over 3,600 Washington customers was part of the Company's larger direct mail campaign to over 15,000 customers.

Q. Please briefly explain the expanded WALIEE program.

A. The WALIEE program provides energy efficiency benefits through whole home weatherization to income-qualifying residential dwellings. Prior to 2024, WALIEE funded up to $5,000 for energy efficiency measures and an average of $1,000 per household per community action agency for health, safety, and repairs reimbursement. Last year, NW Natural, working with its Energy Efficiency Advisory Group, tripled

the maximum amount available for a residence's energy efficiency measures to $15,000, as well as increasing the health, safety, and repairs reimbursement to $4,000. This increase in funding can help address the approximately 10,000 high-burden, low-income customers within NW Natural's Washington service territory who its EBA identified as significant opportunities for high impact energy efficiency upgrades.

Q. Please highlight some of the enhancements that NW Natural has made to other energy affordability and equity programs.

A. In addition to the BDP and WALIEE, NW Natural offers additional resources for customers to better afford their natural gas bills. Like the BDP, income eligibility is set at the greater of 80 percent of Area Median Income or 200 percent of the Federal Poverty Level. These programs include an arrearage management program that has delivered $80,000 in instant grants since it launched on April 1, 2025, as well as a ratepayer-funded energy assistance program—the Gas Residential Energy Assistance Tariff (GREAT)—which distributed approximately $620,000 to 913 customers in the most recent program year (2023-2024)—surpassing previous year records in dollars allocated and customers served. In addition, the Gas Assistance Program (GAP) is a supplemental energy assistance program funded by NW Natural shareholders, employees, retirees, and customers that is matched by the Company up to $60,000 annually. Funds are allocated directly to customers via a network of Community Action Agencies. The program has raised and delivered over $6.7 million to 60,000 customers in Washington and Oregon since it was established in 1982.

The Company also offers several payment plan options to help customers manage their monthly expenses. Equal Pay is an option that smooths out customers'

bills over 12 months to make them more predictable; and the Company's Level Pay and Current Bill Plus plans offer more time and manageable payments for customers who need help with paying past due balances.

The Direct Testimony of Cecelia J. Tanaka (Exh. CJT-1T) fully describes all of these efforts, in addition to a comprehensive explanation of NW Natural's ongoing affordability and equity initiatives.

V. SUMMARY OF WITNESSES

Q. Can you briefly describe the testimony provided by other witnesses in this case?

A. Seventeen other witnesses describe the various components of cost that demonstrate the need for the requested rate increase.

Cecelia J. Tanaka, Energy Equity and Affordability Lead, describes the Company's initiatives and priorities regarding energy equity and inclusion, including NW Natural's BDP, details on the Company's EBA and low-income assistance offerings. Exh. CJT-1T.

Kyle T. Walker, Senior Manager of Rates and Regulatory Affairs, explains NW Natural's MYRP proposal, which covers three years beginning on August 1, 2026. Mr. Walker also explains how NW Natural determined the revenue requirement for each of the three years in the MYRP, including restating, proforma, and provisional adjustments. Exh. KTW-1T.

Natasha C. Siores, Senior Manager, Regulatory Affairs, explains NW Natural's proposed performance measures consistent with Commission rules and guidance. These performance metrics reflect three strategic goals that align with NW Natural's business principles: ensuring a resilient, reliable, and customer-focused

distribution grid; promoting customer affordability; and advancing equity in utility operations. Exh. NCS-1T.

Cory A. Beck, Director of Customer Experience Services, describe NW Natural's commitment to making sure that all customers—regardless of English proficiency or income level—have equitable access to essential utility programs and information. Exh. CAB-1T.

Brody J. Wilson, Vice President, Treasurer, Chief Accounting Officer and Controller, explains the Company proposed capital structure of 51 percent common equity, 1 percent short-term debt, and 48 percent long-term debt in order to support its strong investment grade credit profile. Exh. BJW-1CT.

Jennifer E. Nelson, Assistant Vice President of Concentric Energy Advisors, Inc., a firm with expertise on utility finance and required rates of return for regulated companies, provides testimony about the Company's cost of equity, or in other words, the return that NW Natural should be given the opportunity to earn in order to attract capital. Her analysis shows that a reasonable range of the cost of equity is between 10.0 percent and 11.0 percent. Ms. Nelson recommends that NW Natural be allowed an opportunity to earn a 10.1 percent return on equity in RY1 and 10.2 percent return on equity in RY2 and RY3. Exh. JEN-1T.

Jorge O. Moncayo, Business Planning Senior Director, describes the Company's capital project budgeting and forecasting processes, including management approval and lifecycle phases, as well as the Company's ongoing capital expenditure levels. Exh. JOM-1T.

Daniel B. Kizer, Engineering Senior Director, and **Scott S. Johnson**, Senior Director of Gas Supply, provide testimony about aspects of the Company's long-term system planning and the Company's recent improvements to its system modeling, as well as the improvements to NW Natural's distribution system and storage facilities that the Company is undertaking in order to keep NW Natural's system safe, reliable, and economical. Exh. DBK-SSJ-1T.

Wayne K. Pipes, Director of Facilities, Security and Emergency Management, discusses The Dalles Resource Center and physical security upgrades the Company is undertaking at various sites. Exh. WKP-1T.

Brian E. Fellon, Vice President and Chief Information Officer, describes the IT&S projects and programs for which the Company is seeking recovery in this case. He also provides an overview of NW Natural's strategic vision and explains major program IT&S planning areas. Exh. BEF-1CT. In a separate piece of testimony, Mr. Fellon also discusses NW Natural's ongoing efforts to comply with the Transportation Security Administration's Security Directive Pipeline-2021-02 series, including future projects that will be necessary due to those series of directives. Exh. BEF-23HCT.

Joe S. Karney, Vice President of Engineering and Utility Operations, explains the NW Natural's Meter Modernization Program, including the background and drivers for the program, NW Natural's evaluation of technology options, MMP deployment plans, and new employees associated with the MMP. Mr. Karney also describe the Company's cost recovery proposal for the Meter Modernization Program. Exh. JSK-1T.

Melinda B. Rogers, Vice President, Chief Human Resources and Diversity Officer, provides testimony on NW Natural's labor costs, and describes the Company's practices related to compensation, which ensure that all employees receive compensation at market-median rates. Additionally, Ms. Rogers describes the Company's overall employee count over the course of the MYRP. Exh. MBR-1CT.

Tobin F. Davilla, Senior Manager of Financial Planning and Budget, explains how NW Natural calculated operations and maintenance expense, including how NW Natural adjusted Test Year operations and maintenance expense (April 2024 – March 2025), as well as the adjustments made for each year of the MYRP. Exh. TFD-1CT.

John J. Spanos, President of Gannett Fleming Valuation and Rate Consultants, LLC, presents the depreciation study that is used to calculate the Company's depreciation rates. Exh. JJS-1T.

Holly J. Braun, Business Development Consultant, explains NW Natural's TEN pilot project in Vancouver, including how the Company proposes to recover the costs of the project. Exh. HJB-1CT.

Robert J. Wyman, Rates and Regulatory Economist, describes the methodology for NW Natural's weather normalized use-per-customer forecast for the Residential and Commercial rate classes, presents the Embedded Cost of Service Study ("EmCOSS"), and describes the Company's rate spread and rate design proposal. Exh. RJW-1T.

Q. Does this conclude your Direct Testimony?

A. Yes, it does.

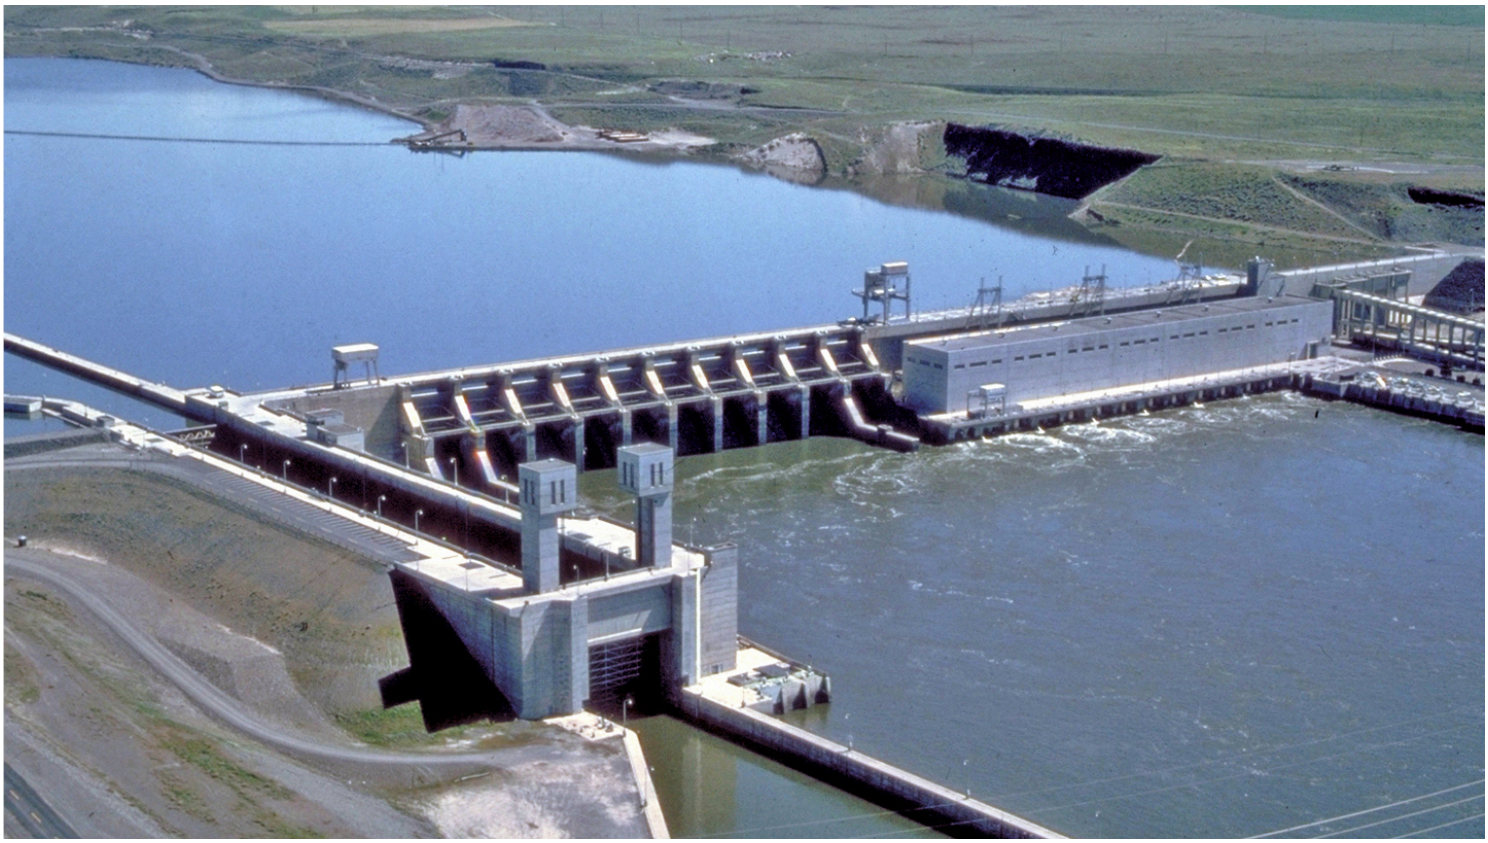
Federal hydro system powers region through arctic blast

January 31, 2024



Federal dams like Ice Harbor pictured here were instrumental in keeping the lights on during the recent cold snap.

Federal dams were operating at levels not seen since the age of aluminum smelters in the Northwest and were key to keeping the lights on during the recent arctic blast.

Serving consistently high energy demand took significant coordination with multiple partners for both proactive planning ahead of the weather and real-time adjustments as conditions evolved.

Vice President of Generation and Asset Management Michelle Cathcart

Plunging temperatures across the Pacific Northwest that stayed below freezing for four days from Jan. 12-16 were no match for the Federal Columbia River Power System. Despite record-breaking energy demand and other challenges, the federal power system supported its utility customers and the region through the most intense cold snap the Northwest had seen in 20 years.

“The federal dams and Columbia Generating Station, the region's one nuclear plant, were vital to keeping the lights on during this dangerous freezing weather event," said Power Services Senior Vice President Suzanne Cooper. “While other generation experienced outages, federal generation operated reliably. This performance combined with activity in the wholesale power market allowed us to meet our customers' load and help supply others during this event."

“There were challenging pockets throughout the system caused by physical damage to equipment, but our real-time staff made adjustments to preserve reliability, and our field teams did an excellent job of safely responding to interruptions in really challenging weather conditions," said Ricky Bustamante, acting vice president Transmission System Operations.

BPA's area load peaked at 11,396 megawatts during the morning of Saturday, Jan. 13, which is a modern era energy demand record since the time aluminum smelters were served with federal power. The previous post-aluminum record was set on Dec. 22, 2022, with 11,068 MW. The all-time peak load, which includes service to aluminum smelters, was set in 1990 with 11,930 MW. For context, area loads above 10,000 MW are uncommon and tend to only be observed during significant cold snaps.

Also on Jan. 13, BPA's aggregate customer load climbed even higher, peaking at 13,267 MW.

“Serving consistently high energy demand took significant coordination with multiple partners for both proactive planning ahead of the weather and real-time adjustments as conditions evolved," said Vice President of Generation and Asset Management Michelle Cathcart. “The dependability of the federal power system in extreme and dangerous weather events demonstrates its value and importance to BPA's power customers and the broader region."

Hydro power performance and operational considerations

BPA ramped up the output of the FCRPS during the day as electricity demand climbed and used power imports, or purchases, during light load hours at night to hold water back to maximize power generation

and meet peak demand. This helped BPA keep the lights on for the duration of the cold snap. During the cold snap, BPA did successfully work to optimize system conditions and operations to limit the potential financial exposure but ended the period as net buyer.

Leading up to the event, BPA coordinated with the U.S. Army Corps of Engineers and the Bureau of Reclamation to delay planned maintenance, ensuring the FCRPS had as many units available as possible. In addition, BPA requested restricted maintenance for CGS through Jan. 18.

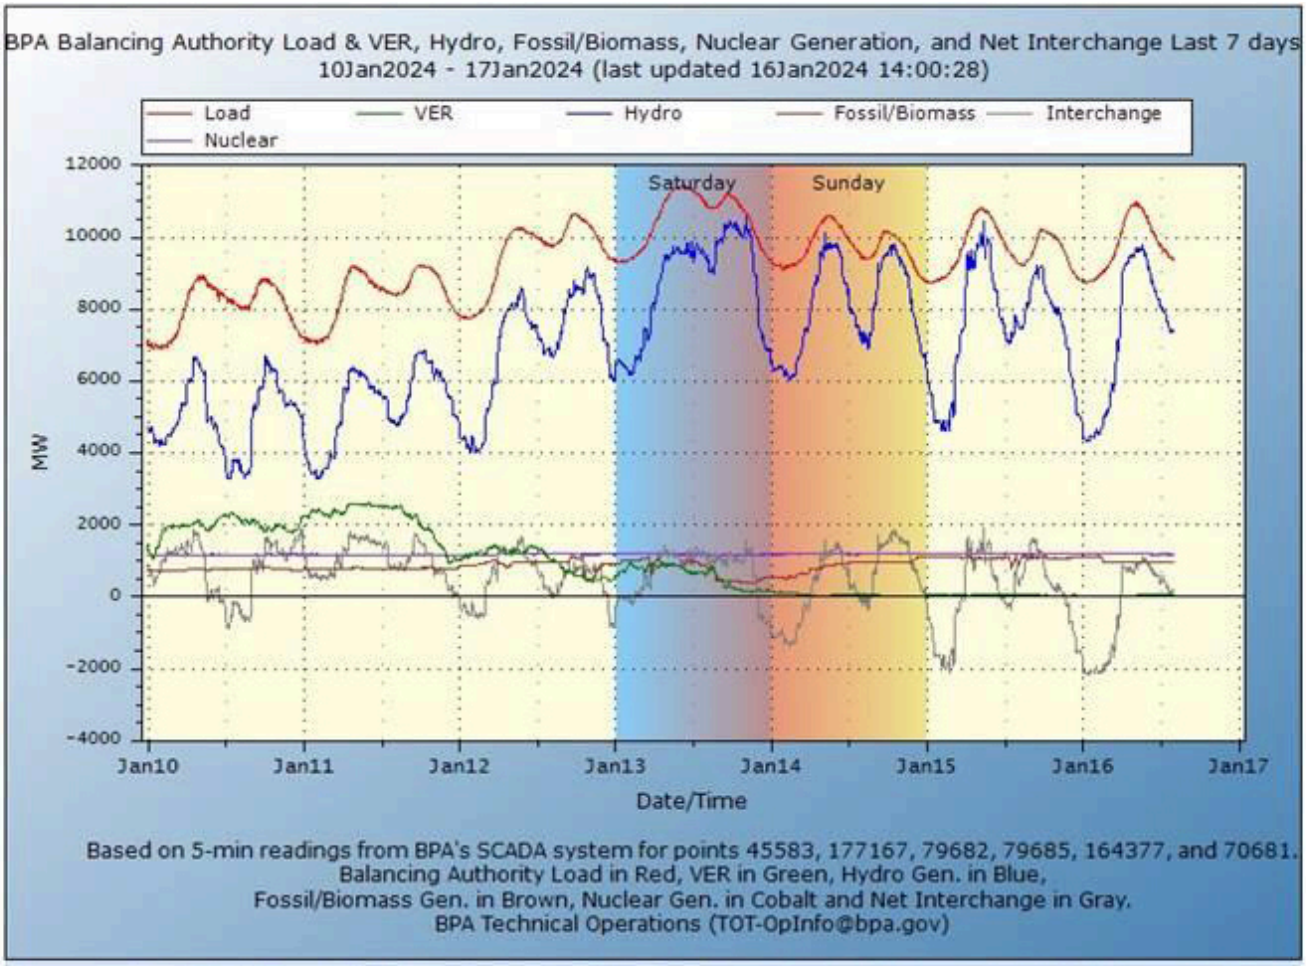
Due to a low water year this year, BPA's planned winter operations are managing the river to minimum flows. The requirement to save water above Grand Coulee for spring fish operations limited the amount of additional generation during the artic event; however, creative management of the lower Columbia projects allowed BPA to increase generation without reducing the amount of water in Grand Coulee's reservoir needed for springtime. Leading up to the impending cold snap, operations focused on creating storage space in the lower Columbia projects so upstream projects could increase generation without increasing flows below Bonneville Dam above the minimum needed to protect Endangered Species Act-listed chum salmon redds. This led to 525 average megawatts of extra generation from Jan. 12-16.

BPA also worked with Canada to release extra water from Canadian storage reservoirs. This provided an additional 600 aMW from Jan. 13-16.

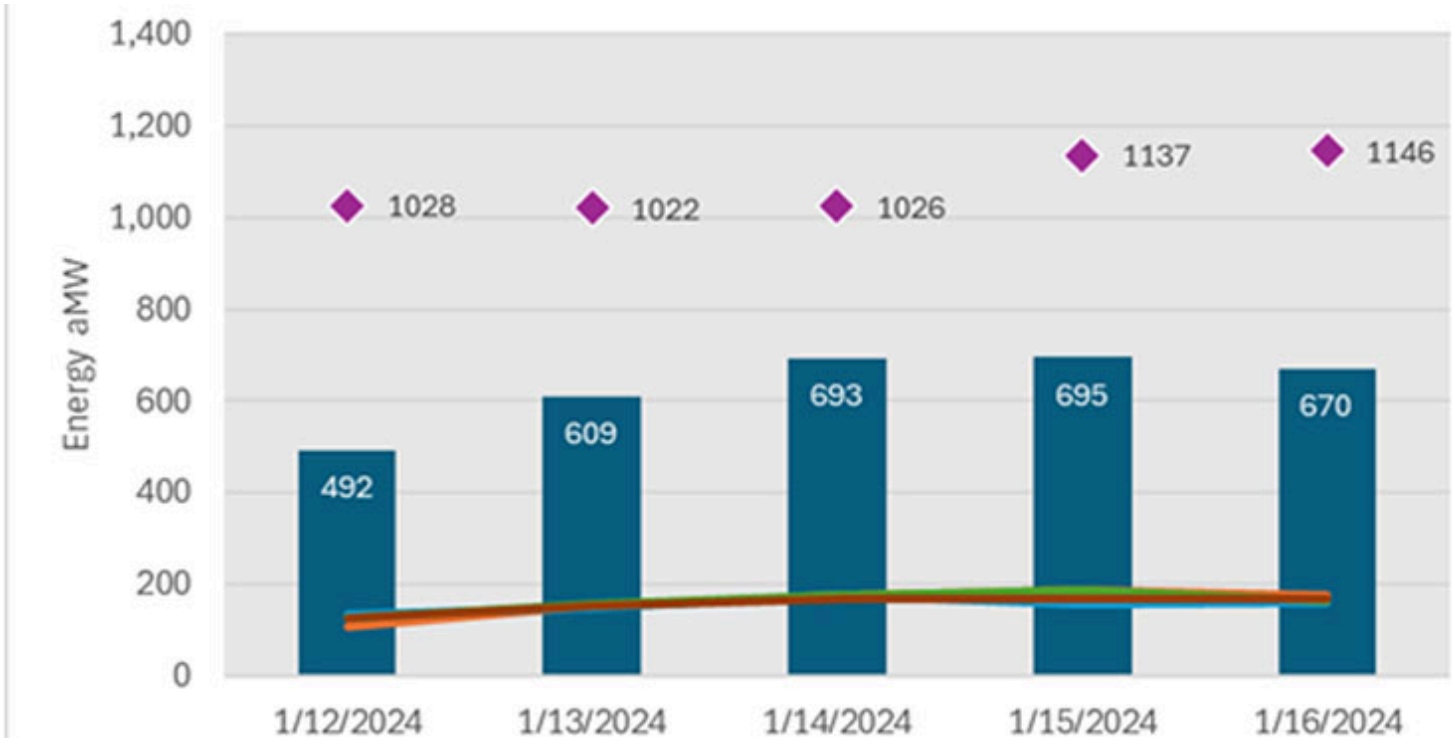
Lower Snake River dams performance

The lower Snake River dams made major contributions to BPA's efforts to keep the lights on during the cold snap. Combined, Lower Granite, Little Goose, Lower Monumental and Ice Harbor dams peaked to more than 1,000 aMW each day from Jan. 13-16 with the highest one-hour peak of 1,146 MW achieved on Tuesday, Jan. 16. This was accomplished by reducing generation late at night into the early morning hours to less than 200 MWs and ramping to over 1100 MWs during the peak daytime hours.

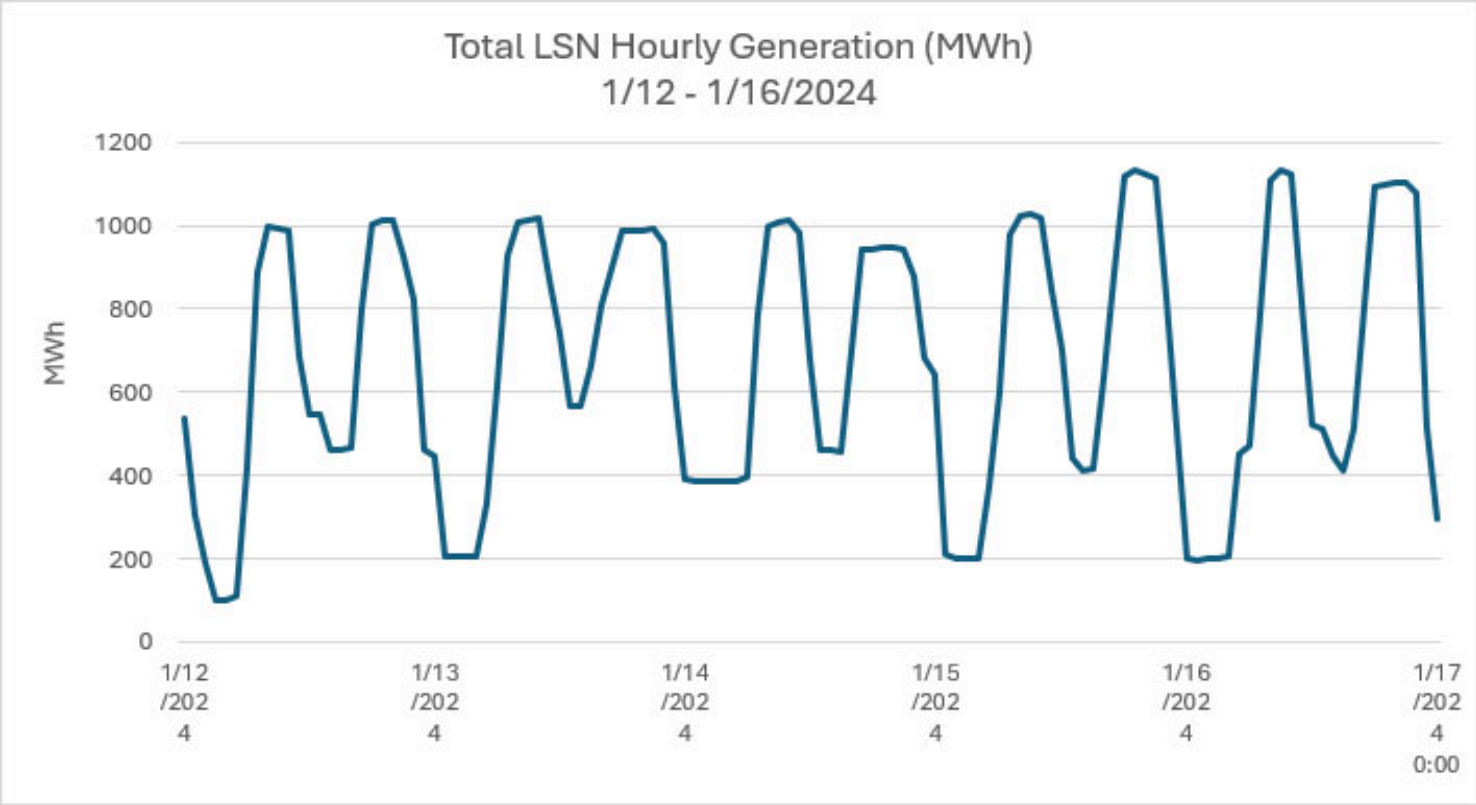
In addition to peaking performance, Ice Harbor Dam provided much needed local energy in the Tri-Cities area by increasing minimum generation throughout the extreme weather event.



On the chart above, VER = Wind and Solar.



The lower Snake River dams also registered an impressive, 18-hour sustained peak during the cold snap. Sustained peak measures the highest six hours per day of generation over a three-day period. The chart below demonstrates that sustained peak was 1,071 MW.



An hourly view of lower Snake River dam generation from Jan. 12-16. Generation at these dams can follow load demand, increasing to meet morning and evening peaks while lowering generation during nighttime hours.

Guidehouse
Outwit Complexity

April 2025

The Pacific Northwest energy landscape is evolving rapidly, with more frequent extreme weather events and increasing energy demand placing new pressures on reliability and resource adequacy. The January 2024 cold weather event revealed the Pacific Northwest's energy system is dangerously close to having insufficient supply and highlighted enhanced coordination between electric and natural gas systems is critical to ensuring a resilient and reliable energy supply.

Industry leaders came together in May 2024 to address the need for enhanced coordination of the gas and electric systems. Although several individual studies examining the changing regional landscape have been conducted in recent years, we identified a need to synthesize these studies to identify a common understanding of how the region is planning to meet demand and assess risks. This bird's-eye view across the analytical landscape could provide insights and recommendations to enhance gas-electric planning and coordination.

To execute on this vital task, we asked Guidehouse to conduct a thorough literature review. Guidehouse synthesized the key findings from relevant studies, including regional forecasts, adequacy assessments, and extreme weather retrospectives. Guidehouse developed gaps and recommendations based on the findings that serve as an essential foundation for improving coordinated strategies for regional planning.

The stakes are enormous – the reliability of energy supply to our customers, the achievement of our clean energy goals, and the continued economic vitality of our region require us to work together on the transition to a clean energy future. By proactively coming together to support this literature review, we are taking a crucial step in building a clearer understanding of what we need to do to secure a more sustainable and resilient energy future for the Pacific Northwest.

With thanks to and on behalf of the work group,

Steve Andersen, Clark Public Utilities and Shawn Hill, FortisBC

Scope and Purpose

Helping inform improvements in gas and electricity sector coordination with the goal of enhancing reliability and resilience at a time of rapid change.

The literature review analyzed 19 studies published by gas and electric organizations to identify common themes and risks associated with rising energy demand and the increasing frequency of extreme weather events in the Pacific Northwest and the broader Western U.S.

Based on this analysis, and input from utility planners involved in the NWGA/PNUCC joint working group, we have developed recommendations aimed at enhancing coordination between gas and electric systems.

The key findings and gaps and recommendations are summarized in the following findings brief for regulators, policymakers, and utilities to better understand the issue.

Literature Review - Key Findings

The studies reveal insights into energy demand projections, resource adequacy, system resilience, and the impact of extreme weather events in the Western region. They reveal the need for gas/electric coordination and regional planning to adapt to a changing landscape.

© 2025 Guidehouse

Theme 1

Key Findings: Demand and Load Growth

1

A significant driver of load growth in the Western Interconnection and the Northwest is the expansion of data centers

Data centers consume large amounts of electricity due to their cooling needs, leading to substantial increases in electricity demand. This expansion is projected to continue in the Northwest, with load increases ranging from 50% to 200% depending on the specific Balancing Authority.

Data center expansion is also being considered and forecast to grow in other areas, such as the Desert Southwest, which could result in a doubling of the share of data center demand by 2030.

2

The projected load growth in the Western Interconnection over the next ten years is almost double the rate reported in the previous year's assessment

The 2023 assessment predicts a 16.8% increase in demand in WECC over the next decade, compared to a 9.6% increase reported in 2022. The PNW is forecasting an increase of over 30% in the next 10 years.

This surge in demand is a primary factor contributing to the growing resource adequacy risks in the region. Data centers, as mentioned in #1, are the major contributor to this increased growth and steep revisions of past projections. High-tech manufacturing and the trend towards electrification are also cited.

3

Electrification policies and trends are contributing to the increase in demand – limited analysis considering implications of direct use of natural gas

The transition to electric vehicles and the electrification of heating in buildings are contributing to the increasing need for electricity. While energy efficiency measures help to offset some of this increased demand, utilities are still forecasting significant load growth in the coming years.

The switch from gas to electric in residential homes will also have a significant impact on peak demand. The value of the direct use of natural gas during extreme weather events and the impact of attachment policies for new customers is an important topic that was not discussed in the studies reviewed.

© 2025 Guidehouse

Theme 2

Key Findings: Resource Adequacy/Reliability

1

Resource adequacy remains a critical risk - planned resources may be insufficient to meet future demand

This risk has increased compared to the previous year. The Western Interconnection faces challenges in meeting future energy demands under various system conditions. The most significant risk factors include substantial load growth, extreme weather, uncertainty in forecasting, and the integration of non-dispatchable resources like solar and wind power.

While short-term projections (2024-2025) for WECC show a minimal number of demand-at-risk hours, the magnitude and frequency of these hours significantly increase from 2026 onward, indicating a shortfall in resource plans.

2

System flexibility is significantly impacted by the increasing integration of variable renewable energy (VRE).

Renewables pose challenges for maintaining a reliable electricity supply. The Variability Margin Index (VMI), a metric used to assess the variability in the resource and load mix, showcases this trend in system flexibility. The VMI has increased substantially between 2022 and 2023 in the WECC due to higher renewable resources, highlighting the growing need for dispatchable flexible resources in the Western Interconnection.

Increasing drought conditions are also responsible for 23% lower hydro generation in the NW, demonstrating heightened risks of climate change on this critical regional resource.

3

Increasing variability coupled with baseload retirements and an increasingly constrained natural gas system pose a challenge to resource adequacy.

Traditional resources can be readily dispatched to meet demand, while variable resources like solar and wind power cannot. The increasing reliance on variable resources, coupled with the retirement of traditional baseload resources, makes it challenging to ensure a consistent energy supply under diverse conditions.

As coal plants are retired natural gas is increasingly being relied upon as a flexible generation resource. However, existing natural gas infrastructure, such as interstate pipelines that are at times reaching 95% utilization, are becoming increasingly constrained. New natural gas infrastructure will need to be developed in coming years to accommodate new generation.

© 2025 Guidehouse

Theme 3

Key Findings: System Resilience and Flexibility

1

Natural gas generation flexibility is critical in maintaining grid resilience

The Western Electricity Coordinating Council (WECC) modeled a simulated extreme cold weather event in 2033 to understand the impacts on the system, determining that the Western Interconnection experienced load shedding when natural gas derates were modeled signifying the reliance on natural gas during extreme events.

2

Natural gas generation will be a needed resource for system resilience and flexibility even under a decarbonized grid

Natural gas is required to provide firm capacity not met by variable renewables, even under up to a 98% decarbonization scenario in the NW. As variable renewable energy use increases, gas generation will become crucial in avoiding loss-of-load events.

Natural gas generation capacity factors are forecasted to decline over time in these decarbonization scenarios but remain cheaper than relying on other forms of firm generation or energy storage.

3

Enhancing system resilience requires addressing vulnerabilities related to natural gas fuel supply

The critical role of natural gas generation hinges on a functioning natural gas system. The 2024 cold snap and Winter Storms in Texas underscored the need for more resilient natural gas infrastructure. Fuel assurance is vital for grid stability and reliability during extreme weather events. To mitigate fuel-related risks, proactive emergency planning, infrastructure hardening, improved gas-electric communication, and increased natural gas supply resources are essential.

© 2025 Guidehouse

Theme 4

Key Findings: Gas/Electric System Interdependence

1

The increasing interdependence of systems necessitates enhanced coordination to mitigate the risk of cascading failures.

The growing reliance on natural gas-fired generation to meet peak demand and compensate for the intermittency of renewable energy sources necessitates increased coordination between gas and electric utilities to ensure the reliability of both systems. Emerging technologies, such as hybrid-heating systems, should be jointly explored especially in infrastructure-constrained areas as they can yield significant cost savings through peak shaving.

2

Gas-Electricity Coordination is hindered by regulation misalignment

Misalignment between natural gas and electricity markets poses significant challenges to efficient coordination and reliability.

Incompatibilities in contracting practices, scheduling discrepancies, and insufficient infrastructure investment incentives hinder the ability of power generators to secure reliable gas supplies, and natural gas companies from making necessary midstream infrastructure investments, underscoring the urgent need for market reforms in certain energy markets.

3

Siloed planning in gas and electric systems, has a detrimental effect on overall energy reliability

Planning often occurs in isolation from considerations related to natural gas supply and transportation.

Similarly, efforts to electrify building heating and other end uses that traditionally rely on natural gas must consider the capacity limitations of existing gas infrastructure for delivery to power.

© 2025 Guidehouse

Theme 5

Key Findings: Extreme Weather Events

1

Natural gas played a vital role in maintaining electricity supply during extreme cold snaps

During the January 2024 cold snap, the natural gas system satisfied 70% of end-use energy demand during the peak hour of this event in the PNW. The Western Electricity Coordinating Council (WECC) modeled a similar extreme cold weather event ten years in the future (2032) and found that natural gas generation was needed to meet load. When natural gas derates were modeled, load shedding occurred, demonstrating the reliance on natural gas during these events.

2

Improve the quality of forecasting load during extreme weather is critical for ensuring resource adequacy

Extreme weather events, especially those involving extreme cold, can cause electricity demand to deviate significantly from historical forecasts. This is partly due to the growing electrification of the heating sector, which makes demand more sensitive to temperature changes. Underestimating demand ahead of extreme weather events can lead to insufficient resource scheduling and potential reliability issues.

© 2025 Guidehouse

Theme 6

Key Findings: Regional Planning

1

Prioritize collaborative regional planning efforts

Numerous studies highlight the critical need for improved regional coordination and collaboration to tackle the complex challenges related to resource adequacy and grid reliability, especially considering the increased interdependence of gas and electric systems following the significant rise in natural gas generation capacity over the past two decades.

Current planning processes are inadequate given the evolution of the energy system.

2

Incorporate extreme weather and fuel security in planning

With increasing frequency of extreme weather events, cold and hot, the supply and demand for electricity and natural gas is disrupted, leading to reliability challenges.

Planners must incorporate better scenario planning and robust strategies to enhance resilience to these events including weatherization and hardening, fuel assurance plans especially for natural gas, and emergency response capabilities between gas and electric systems at an operational level.

3

Address uncertainties forecasting load growth – in particular, data centers

Data centers and electrification of buildings and transport represent a significant and rapidly growing source of electricity demand in the region. This growth and the uncertainties forecasting it adds to the pressure on the grid and presents challenges for resource adequacy planning.

Regional planning must proactively address the implications of data center expansion and electrification by implementing better data sharing, coordinating planning, and encouraging energy efficiency, demand management, adequate transmission infrastructure, and strategic siting.

Planning Implications for Gas-Electric Utilities

Gaps, and Recommendations

From these studies, we have identified gaps in electric and gas sector planning and highlighted corresponding recommendations to improve coordination and preparedness.

© 2025 Guidehouse

Planning Implications: Gaps

Varying gas and electric sector approaches to forecasting loads from electrification, data centers, demand side resources, and evolving consumer behavior drive uncertainty in planning

- Current load forecasting methods used by PNW utilities often fail to adequately account for the impacts of electrification. Only 40% of PNW Balancing Authorities directly incorporate electrification assumptions in their forecasts.
- Differing planning assumptions, data inputs, and granularity between gas and electric utilities in the region hinder effective coordination and comparisons of forecasts.
- Utilities differ in how they forecast demand response programs and customer participation, not just passive load. Some consider demand response as a supply-side resource while others treat it as load modifying. This lack of transparency limits broader alignment amongst entities.
- The direct use of natural gas in buildings is a key factor in meeting baseline demand and peak loads but is often overlooked in studies. Current approaches do not fully account for its impact, creating gaps in demand projections. Electrification efforts must better consider how transitioning direct-use gas customers affects total load growth, peak forecasting, and grid reliability.

Insufficient understanding of peak demand and how gas/electric entities can jointly manage peak events

- Electric and gas utilities lack a clear understanding of how both sectors interact during peak events, in addition to how electrification and extreme weather will impact peak energy demand in each respective system.
- Peak events manifest differently and have distinct resource needs for gas and electric systems. For example, the gas system may experience a sharp single day peak driven by space heating demand while the electric system may face a multi-day capacity challenge during a prolonged cold weather event. Analyzing the varied nature of peak demands and how they are mitigated across the sectors is important for understanding the most efficient mitigation solutions. Gaps also exist in quantifying and incorporating such solutions into planning processes.
- Electric and gas system planners don't have a way of looking at coincident peak impacts on their systems under both extreme weather and end-use changes, and thus how to invest in different kinds of technology.

© 2025 Guidehouse

Planning Implications: Gaps

Planners have obscured visibility of gas-electric interdependencies

- Gas and electric system planners often lack detailed visibility and data into the constraints, performance, and interdependencies of the other sector, making it difficult to accurately assess resource adequacy and identify potential risks.

Traditional planning metrics are insufficient in capturing new risks

- Metrics like planning reserve margins (PRMs), which measure the amount of capacity above forecasted peak demand, fail to account for the energy limitations of VERs, fuel supply risks, and the impact of extreme weather events on resource availability.
- Traditional resource adequacy models, often based on a loss-of-load event (LOLE) of 1 day in 10 years, may not adequately capture the risks associated with more frequent and severe extreme weather events. These events can simultaneously impact both demand and resource availability, leading to extended periods of high risk.

Lack of a framework to measure and optimize the full value and affordability of energy services that customers receive

- There is a lack of an integrated perspective on how to best serve customers' total energy needs across all sources. When gas and electric planning are siloed, the focus on optimizing overall delivered energy value to customers is often lost. Separate gas and electric planning processes, often governed by distinct regulatory models, typically aim to maximize value for either gas or electric ratepayers rather than the total cost and quality of energy services delivered. This leads to suboptimal resource choices and missed opportunities for synergy.
- Current planning approaches and regulatory constructs are not well suited to comprehensively evaluate tradeoffs and complementarities across the gas and electric systems.

© 2025 Guidehouse

Planning Implications: Recommendations

Facilitate better coordination and collaboration between gas and electric entities by establishing cross-sector platforms and forums that actively develop and recommend planning assumptions or methodologies

- Regular forums that convene gas and electric utilities, pipelines, ISOs/RTOs, and other stakeholders to share information, align planning assumptions, and develop solutions can meaningfully advance coordination. Existing forums like the PNUCC/NWGA working group should be leveraged and expanded to serve this function. Leverage regional bodies, conferences, and other forums as venues to recommend and implement enhanced gas-electric coordination initiatives.

Promote enhanced operational data sharing between gas and electric utilities to improve system resilience

- Promote routine operational data sharing through joint platforms, regular coordination meetings, and standardized data formats/protocols. One notable example is in the Northeast where the NE-ISO decided to provide day-ahead hourly dispatch data from power plants to gas system operators to help them better plan for loads and ensure natural gas system integrity.

Engage stakeholders on benefits of assessing overall energy value instead of siloed gas vs. electric perspectives

- Partner on developing accessible tools and guides that empower stakeholders to evaluate holistic energy value. Dialogue should be facilitated with consumer groups, environmental advocates, and policymakers on integrated value frameworks.
- Articulate customer, reliability and cost benefits of more holistic gas-electric planning to regulators and policymakers. Fact-based, data-driven case studies and whitepapers that quantify benefits can build support. Examples could include peak demand reduction, consumer savings, improved grid resilience from backup fuel capability, and gas and electric rate stability from coordinated infrastructure build.

© 2025 Guidehouse

Planning Implications: Recommendations

Jointly plan and collaborate on understanding load growth and peak mitigation options

- Planners and policymakers need to better consider a range of peak mitigation options like hybrid heating across gas and electric sectors. For example, hybrid gas-electric heating systems, if aggregated and dispatched effectively, could provide significant peak reduction value for the electric system while creating more manageable gas demand. Developing a shared understanding of these options and their associated infrastructure needs, operational coordination requirements, and market structures can unlock significant value.
- Inputs used for load forecasting should be improved and better aligned across entities to more accurately account for the impact of load growth.
- Develop new techniques and utilize information beyond historical data to model decarbonization and increasing frequency of extreme weather.
- Improve point load forecasting techniques to anticipate future data center, manufacturing, and other large load growth.

Better integrate gas and electric planning processes by reducing barriers and designing new models

- Utilize or develop coupled gas-electric models to better understand system interdependencies. Modeling tools that can stress test gas and electric systems under a range of future demand and weather cases can identify key vulnerabilities and quantify the value of solutions like demand response, storage, and inter-regional transmission. Partnerships between gas and electric utilities, universities, national labs, and vendors should be formed to advance this research.
- Identify changes needed to regulatory models and planning processes to enable more holistic, integrated approach optimizing customer value. Potential evolutions could include aligning gas and electric utility revenue models, mandating joint gas-electric planning studies, creating new customer energy service metrics, and enabling co-optimized gas-electric operations. Regulators should engage stakeholders to assess barriers and design new models.

© 2025 Guidehouse

Planning Implications: Recommendations

Establish tools and frameworks for quantifying the full value of gas-electric interdependencies

- Develop metrics to quantify reliability and resilience value of gas-electric coordination. Candidate metrics could include probability of coincident gas-electric system failure and customer outage costs. Standard calculation methodologies should be developed and benchmarking efforts undertaken.

Adopt more robust reliability indicators that go beyond traditional metrics

- Loss of load metrics and planning reserve margins need to evolve to better reflect energy limitations of renewables, fuel supply risks, and weather impacts. New techniques such as effective load carrying capability for wind and solar and convolution of fuel disruption probabilities are needed. Scenario-based planning that captures correlated outages across resources should complement traditional Monte Carlo simulations.

Align planning and regulatory approaches to mitigate policy whiplash

- Policymakers should strive for durable, long-term policy frameworks that reduce investment risk. Varying policy approaches at different government levels (i.e. city, county, state) and lack of long-term clarity is a key planning challenge. Abrupt shifts in federal, state or local policies around issues like building electrification, renewable tax credits, and gas hookup moratoriums create significant uncertainty for utility planners.
- Explore approaches to de-risk and depoliticize energy system planning to improve investment certainty. Potential strategies include formalizing long-term resource and reliability targets in legislation, using independent expert panels to set planning assumptions and study methodologies, and creating accountability mechanisms. Best practices should be researched and socialized.

Guidehouse

Demand and Load Growth

Electricity demand growth has outpaced estimates and magnitude of future increases are uncertain. Demand uncertainty is a challenge for energy planners.

© 2025 Guidehouse

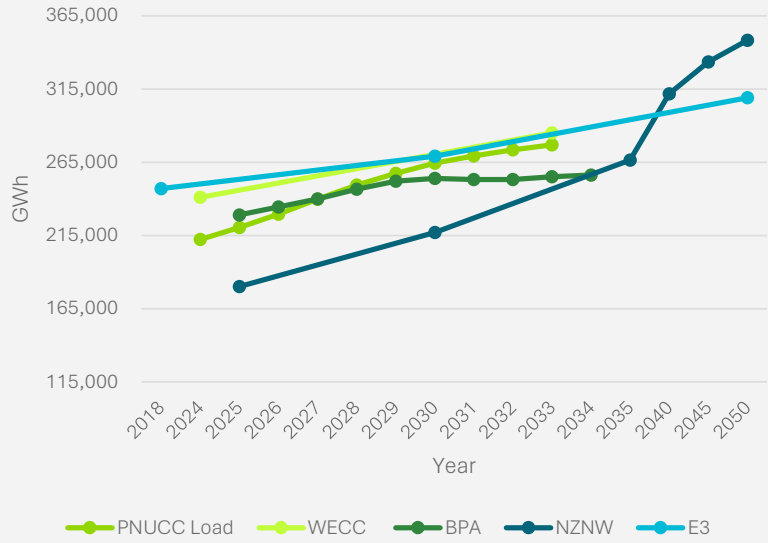
Electricity demand is set to more than double previous projections

- **Studies anticipate significant increases in both annual energy demand and peak demand, though total demand will increase at a faster rate.[1, 3, 4, 6, 12]**
  - WECC projects a 16.8% increase in total energy demand over the next 10 years, nearly double the growth projected in 2022.[12]
  - In the NW, specifically, aggregated utility forecasts show demand could rise by over 30% in the next 10 years, from 23,700 aMW in 2024 to 31,100 aMW in 2033.[4]

- **Data center expansion is identified as a primary driver of the increasing future load growth projections between 2022 and 2023, with the Northwest region experiencing the most substantial increases.[4, 7, 12, 17, 13]**
  - Northwest Balancing Authorities (BAs) project potential load increases of 50% to 200% depending on the specific BA. [12]
  - The NPCC adequacy assessment highlights a scenario where higher data center loads result in exceeding 41,000 MW at peak system needs.[7]

- **The push toward electrification is another significant driver. Electrification of transport expected to add more load than buildings in the short-medium term.**
  - New projections reflect electrification policies such as Washington's updated energy codes.
  - Increased demand from charging EVs is projected to approach 4% of total load in the NW by 2034. [4]
  - Forecasting impact of electrification is a challenge across the board. Utilities in WECC have different planning process to estimate impact of electrification on load growth.[12]
  - Only 40% of BAs in the West incorporate electrification assumptions directly into their load forecasts. Another 40% consider electrification as a separate forecast.

NW Electricity Demand Forecast by Study



- *Differences in total demand can be attributed to varying definitions of "Northwest" geography and forecasting approaches*
- *Evolved Energy and E3's forecasts assume scenarios in which long-term decarbonization goals have been achieved with heavy electrification, whereas PNUCC/WECC/BPA examine 10-year projections*

	Montana	3.71%	4.43%	4.81%	6.54%	8.71%
	Utah	7.68%	9.10%	9.84%	13.13%	17.08%
	Wyoming	11.26%	13.24%	14.27%	18.73%	23.90%

Sources: EPRI

- **Data center electricity consumption has reached approximately 5-11% of total electricity consumption in PNW state in 2023 and under a high growth scenario share of demand could grow to more than 13-24% of demand by 2030.** [17]
- This emphasizes the already significant contribution of data centers to regional electricity demand, and uncertainty of future scale of growth.
- **High data center load growth is a major risk in the projected energy shortfalls in the Northwest.** [7]
- **Data centers are a major driver of increasing load growth in all demand forecasts, especially in the Northwest**
  - The expansion of data centers will cause greater electricity usage in the next several years (17% load growth according to NERC), with recent assessments being much higher past predictions.[11]
  - NPCC predicts 2,400 aMW-4,000 aMW of new load in the NW due to data centers and chip fabrication, much higher than the 261 aMW predicted by the 2021 Plan. [7]
  - NPCC data center reference forecast falls between EPRI's moderate and high load growth scenario.[7]
  - Data centers are identified as the primary cause for the increase in demand projections between 2022 and 2023 WECC Resource Adequacy assessment
- **The relatively flat demand profiles of data centers mean they have a greater effect on annual energy than on peak demand**. While data centers consume a lot of energy throughout the year, their demand remains relatively stable and insensitive to changes in temperature. This contrasts with loads like building electrification, which have a more pronounced effect on peak demand.

© 2025 Guidehouse

Uncertainties in expected peak demand and the pace at which demand will grow makes it difficult for entities to plan system adequately

- In the summer, the Western Interconnection's peak demand is projected to be 159 GW, but under a heat event, it could be as high as 186 GW. By 2033, this variability only increases, with peak demand expected to be 184 GW, but a 3% chance it is above 221 GW.[12] This increasing uncertainty means that entities need to be prepared for far higher peak demands.

- **Extreme weather conditions, which are likely to increase the coming years, are changing the peak demand profile of the region, which increases the risk of resource shortfalls.**
  - They will increase uncertainty in peak demand forecasts, which will make it more difficult for entities to prepare for future loads. From 2024 – 2033, the uncertainty range in summer peak demand will increase from 27 to 37 GW.[12]
  - Summer and winter extreme weather events will shift the shape of electricity consumption profiles away from peak periods.[7,11]
  - Extreme summer conditions are also increasing in frequency and are expected to change the NW from a traditionally winter-peaking area into a dual-peaking area. [12]

- **There are large uncertainties regarding the pace at which demand will increase, making it difficult for entities to plan accordingly to prevent resource shortfalls. Adequacy threatened under specific scenarios.**
  - If data center load growth accelerates faster than current projections, demand will surpass available resources and all reliability metrics measured by the NWPCC will be violated. The region will be at risk during both the winter and the summer. [7]
  - If energy efficiency improvements do not occur as expected, there will be higher risk of resource inadequacy during the winter region. [7]

Western Interconnection Summer Peak w/ Uncertainty Ranges

Guidehouse

Resource Adequacy and Reliability

Planned resource additions may be insufficient to keep up with the expected increases in load. The anticipated increase in variable resources will also create more unreliability on the system.

© 2025 Guidehouse

Renewable additions and coal retirements lead changes to the resource portfolio in the coming years, although these plans may be impacted by resource adequacy concerns

- **Northwest utilities plan to add 29 GW of new resources over the next decade to keep up with increasing demand, most of which are wind, solar, and battery resources.[4]**
  - This pattern matches additions from 2020-2025. Wind has accounted for 36% of new additions, solar 25%, and storage 16%.[4]
  - Battery energy storage system (BESS) capacity in the WECC (excluding CAISO) is projected to reach 18.8 GW by the end of 2025, a 38 % increase from the 13.6 GW at the end of 2024 according to S&P.
  - These plans may be disrupted by the long interconnection queue, supply chain delays, and project approvals.[4, 12]

- **Planned coal retirements are also projected to continue, although they are slowing down due to resource adequacy concerns**
  - In the NW, 730 MW of coal is expected to be retired in the near-term (2024-2025) and 660 MW in the long-term (2029-2033). 100 MW of natural gas is expected to be retired by 2033.[7]
  - To reduce resource adequacy risks, some retirements are being delayed. A comparison between 2023 and 2022 resource plans for WECC entities shows that there was an increased delay in coal and natural gas retirements.
    - In 2022 IRPs, for example, nearly 8,000 MW was planned to be retired in 2025, whereas in 2023 IRPs, only 4,000 MW is planned to be retired in 2025.[12]
  - In some cases, coal plants are being converted to natural gas plants which are helping to provide an adequate system such as Jim Bridger 1 & 2 and Valmy 1 & 2 in the NW.[12]

Resource portfolio of the WECC

© 2025 Guidehouse

With high renewable penetration projected, low generation events are more likely to occur, increasing the likelihood of loss-of-load conditions

- Renewable resources are limited by weather patterns and have much higher capacity than actual energy produced. With bad conditions, over 100 GW of installed capacity can produce less than 10 GW.[12]
- **As variable resources like solar and wind become primary sources of electricity, low generation events are more likely to occur**. If these events are not considered during resource planning, variability in weather patterns will cause multiday loss-of-load. **With high renewable penetration, low generation will usurp drought hydro conditions as the biggest threat to loss-of-load events.**
  - The number of demand-at-risk (DRI) hours in the WECC is expected to greatly increase In the coming decade. This indicates that planned resources will be insufficient to meet the expected levels of demand and demonstrates the higher likelihood of loss-of-load events. In the NW, specifically, resources will need to keep up with high levels of demand growth expected in the next two years.[12]
  - The variability margin indicator (VMI) was found to increase over the next 10 years. The WECC Resource Adequacy Assessment found a much greater risk in variability in the WECC in 2023 compared to 2022 due to increases in planned variable resources from roughly 20% to 27% until 2030. Although capacity is expected to increase by 95 GW by 2033, the energy from these (mostly) variable resources is expected to increase by 15 GW. [12]
- Some studies modeled that it would be expensive to rely on renewable overbuild to increase capacity and decrease the chances of loss-of-load events occurring. Instead, coordination with natural gas can allow for more reliable energy production.[7, 13]

Increasingly unreliable hydropower due to droughts

- **The impact of recent droughts in the NW on electricity generation is a warning of lower generation that could occur as drought conditions increase due to climate change**
  - According to the EIA, the NW relies on hydropower generation for 43% of its electricity needs. With the region experiencing a drought, water supply at dams has reached less than 75% of normal levels in several counties this year.
  - Recent drought conditions have caused reservoirs to have limited capacity and have lowered hydropower generation in 2024 to 23% lower than the 10-year average.
  - Water at The Dalles Dam, an indicator of water supply conditions in the Columbia River, was 74% of the 30-year normal at the end of September 2024.
  - Reservoir storage at the end of September was at 48% of capacity in OR, 67% in WA, 76% in MT, and 60% in ID.

- It is projected that the worst 25% of hydro conditions would be responsible for nearly all loss of load events in the region. If drought conditions continue to lower hydro generation, the risk of reserve shortfall and number of loss-of-load events (LOLEs) will increase.[11, 13]

- As electrification occurs, low hydro conditions should cause fewer LOLEs (low solar and wind generation, on the other hand, will cause more), but they will still lead to some unreliability. There is a heightened risk for resource shortfall in the winter, as cold weather could cause extended periods of low hydro, solar, and wind generation coupled with high demand.[12,13]

System Flexibility and Resilience

Natural gas can be used as a firm resource to improve reliability and resilience, although further planning is required to ensure the system is able to support peak demand.

© 2025 Guidehouse

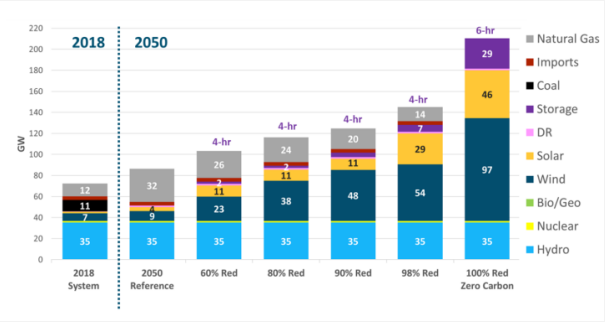
Natural gas will continue to be needed to provide grid flexibility even under deep decarbonization scenarios

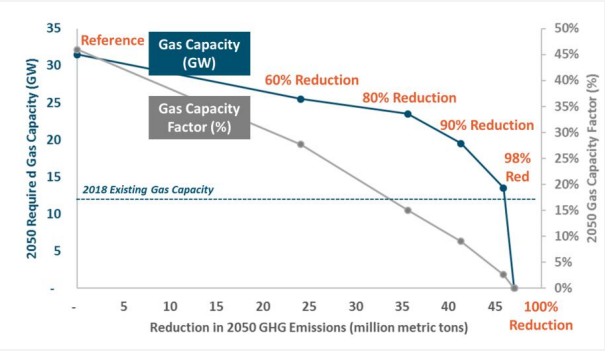
- Across all modeled scenarios, renewables need to be accompanied by firm resources to serve the remaining incremental peak load. To ensure reliability, electricity cannot rely on a single system. **Even under scenarios with 98% decarbonization, natural gas is required to provide reliability, providing the bulk of firm capacity not met by variable renewables.** It is necessary to continue serving load and prevent load shedding.[13]

- **Natural gas is the most cost-effective solution to address capacity challenges, even under deep decarbonization**. It is a more cost-effective and reliable source than alternative options such as battery storage or pumped-hydro, especially during low variable generation and high demand events such as extreme cold events. It also was found to **be a more effective option than renewable overbuild**, which would be costly and could still be unreliable during extreme weather events.[13]

- **As electrification increases, it is modeled that natural gas will transition towards being primarily used to avoid loss-of-load events during low renewable generation events.** Gas will be used sparingly but will need high capacity to ensure reliability, leading to capacity factors as low as 3% under 98% decarbonization scenarios for natural gas plants. To create this high capacity, the addition of new gas generation capacity is necessary even under deep decarbonization. [13]

Generation portfolios and natural gas capacity for various stages of decarbonization





Source: E3

© 2025 Guidehouse

Natural gas generation will be a needed resource for ensuring system resilience and flexibility

- The reliability of the electric grid will continue to be dependent on the natural gas system during peak load events well into the future. The NW is the most vulnerable to loss of load. Southern WECC less suspectable.
  - WECC projecting out the 2022 Cold snap out to 2032 found that any loss of natural gas load would result in unserved load across the region.[16]
  - With all natural gas generators operating, there was no load shedding. However, when natural gas availability was reduced by 15%, 25%, and 35%, load shedding occurred in Alberta and other regions.[16]
  - Highest loss of load occurs in the NW at 40,228 MWh under a 35% natural gas derating scenario.[16]
  - While batteries helped to reduce unserved load hours, they were insufficient alone to mitigate natural gas derating.[16]
  - The study highlights the Western Interconnection's dependence on natural gas generation during extreme weather, even with the transition to renewable generation and energy storage.[16]

Total unserved load by region during simulated 2032 cold snap and NG Capacity Derating Scenarios (MWh)

	0% NG Derate	15% NG Derate	25% NG Derate	35% NG Derate

Increasing reliance on natural gas to meet peak electricity demand raises concerns about the adequacy of natural gas infrastructure - new vulnerabilities planners must consider

- The increasing use of natural gas for electricity generation, in response to the increasing deployment of renewables, raises concerns about whether the region has enough natural gas infrastructure to support the level of real-time flexibility needed to respond quickly to fluctuations in renewable energy supply. [7,12,13,14,16]
- In 2020, three Western states reported that growth in the use of renewable energy could add stress to the natural gas pipeline system if there is not enough pipeline capacity to transport the increased volumes of natural gas needed for power generation. [14]
  - **Average utilization of interstate pipelines in the Pacific Northwest has exceeded 95% in recent years** and is expected to grow during normal winters. [5, 14]
- **Disruptions in one system can cascade to the other**, as seen during Winter Storm Uri in Texas, where the **loss of electricity impacted natural gas production and distribution**, further exacerbating power outages.
- From 2010 to 2019, there were 1,800 reported disruptions on interstate natural gas transmission pipelines. These disruptions were varied in nature but highlight potential vulnerabilities in the natural gas system that need to be assessed. [14]
- The multi-day cold snap in January 2024 was aggravated by constraints in the natural gas system. A fiber optic cable failure at the Jackson Prairie Natural Gas Storage Facility led to reduced system inventory for gas companies in the NW and BC, prompting a curtailment watch. [2]

© 2025 Guidehouse

Guidehouse

Gas and Electric System Interdependence

To prepare for these changes to the system and avoid system shocks, there must be enhanced planning coordination between gas and electric systems.

© 2025 Guidehouse

Studies repeatedly highlight growing interdependence necessitates changes to current planning processes and commercial structures

- **Increasing interdependence can lead to failure cascades**: The electric grid relies on natural gas for reliable generation, especially during peak demand periods and when renewable energy output is low. This dependence is expected to grow as older thermal generators retire and are replaced with a mix of renewables and natural gas plants. However, the natural gas system itself relies on electricity for operation, particularly for powering compressors and other critical infrastructure. This creates a complex interdependence, where disruptions in one system can cascade into the other. [14]

- **Traditional metrics, such as Planning Reserve Margins, are insufficient for systems increasingly dependent on variable energy resources and just-in-time natural gas delivery.** To address this, gas and electric entities must collaboratively develop advanced planning tools and models. Key considerations include accounting for both peak and non-peak load hours, incorporating probabilistic assessments of energy risks like fuel supply limitations and extreme weather events, evaluating interregional transfer capabilities, and considering the operational flexibility of diverse resources, including natural gas generation, renewables, and energy storage. Moving to modeling platforms that co-optimize both the natural gas and electric systems is also recommended. [4,7,11,13]

- **Market misalignment:** The structure of gas and electricity markets can create barriers to efficient coordination. Differences in scheduling practices, trading requirements, and pricing structures can complicate gas procurement for power plants and hinder investment in new gas infrastructure. [14]
  - **Contracting structures** hinder power generators' ability to secure necessary pipeline capacity for reliable fuel supply. Power plants often need to quickly adjust their natural gas consumption based on fluctuating electricity demand. However, the lack of efficient **pricing mechanisms for intraday volumetric variability** makes it difficult for them to procure gas transportation services that meet this need. [14]
  - **Pipeline capacity expansion**: Conversely, the structure of competitive wholesale electricity markets does not adequately incentivize generators to invest in the capital-intensive expansion of gas transportation infrastructure which poses reliability risks. [14]

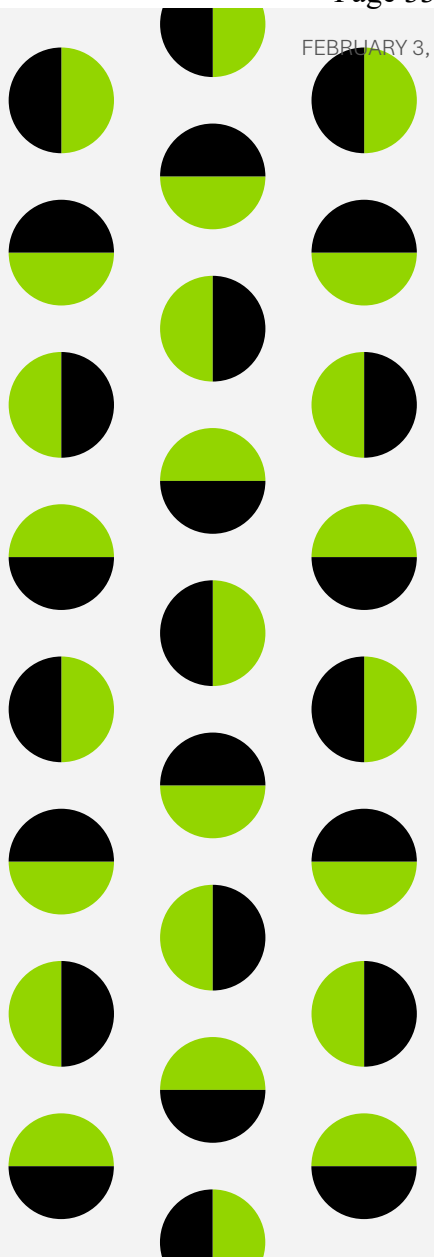
Impact of Weather Events

Recent extreme weather events highlight the gaps in system planning that will limit gas and electric entities' ability to support higher demand with a changing resource portfolio.



© 2025 Guidehouse

Guidehouse

Case study

January 2024 Cold-Snap

This extreme cold weather event provides an example of future system shocks that may occur if there is insufficient planning for extreme weather events.

- Near-record low temperatures across the PNW contributed to high demand requiring around 4900 MW of imports from the Southwest and Rockies during peak demand hours. Peak demand during this period was not exclusive to peak hours.[8, 9] These levels of high demand are an indicator of future unpredictable demand profiles that may be seen with increased extreme weather events.
- During the cold snap, low temperatures caused low hydro generation, which limited fuel supply and meant that utilities were not able to provide sufficient capacity to meet peak demand. [8, 9] This demonstrated the risk of heavy reliance on variable energy resources to provide capacity during moments of peak demand and highlighted the need for available dispatchable resources to avoid resource shortfall during these events.
- There was significant reliance on inter-regional imports to support the cold snap. Despite this, transmission was limited by a preplanned forced outage on the NV-OR border.[2] Congestion also caused outages and limited import capability. [2, 8, 9]

Observed load for 12 BAs during January 12 – 16 relative to peak loads during the last 10 years

Figure 3 - The observed load for 12 BAs during January 12 – 16, 2024 (trend lines) relative to their peak loads (horizontal line at 1.0) during the winter for the last 10 years (Source: U.S. Energy Information Administration (EIA) - Real-time Operating Grid [select download data -> Balancing Authority/Region Files])

Source: WPP

During the event, peak demand was not exclusive to peak hours and came close to, or crossed, in some instances, the average winter peak loads for the last 10 years.

I. INTRODUCTION AND SUMMARY

Q. Please state your name and position at Northwest Natural Gas Company dba NW Natural ("NW Natural" or "the Company").

A. My name is Cecelia J. Tanaka. I am the Energy Equity and Affordability Lead at NW Natural.

Q. Please describe your education and employment background.

A. I hold a Master's in Public Administration, International Policy and Management from the New York University Robert F. Wagner Graduate School of Public Service; and an undergraduate degree in Humanities from the University of Colorado - Boulder. I have over 15 years of experience developing and leading major social impact and corporate responsibility initiatives that advance equity and social justice. I joined NW Natural in January 2021 to lead the Company's community investments focused on improving energy equity and easing energy burden for our most vulnerable communities—including energy efficiency resources for multi-family residents, discounted rate programs for income-eligible customers and philanthropic giving across our Washington and Oregon territories. In April 2024, I joined NW Natural's Regulatory Affairs team to lead the Company's energy equity and affordability efforts and have played a central role in advancing the Company's energy equity strategy through rate case proceedings, stakeholder engagement, and program innovation. Prior to NW Natural, I worked as a Vice President at JPMorgan Chase & Co., the Robin Hood Foundation and New York University; and consulted for the United Nations, Meyer Memorial Trust, and The Collins Foundation.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to detail the Company's commitment to equity and inclusion that encompasses social, environmental and economic dimensions; and to provide an update on the Company's low-income needs assessment and low-income assistance offerings.

Q. Please summarize your testimony.

A. In my testimony, I present an overview of the Company's new and long-standing efforts in energy equity and affordability. I discuss the findings from the Company's Energy Burden Assessment ("EBA"), highlighting key insights, lessons learned, and early plans for next steps. My testimony details the significant progress the Company has made in delivering deeper discounts to more income eligible customers through its bill discount program, launched January 1, 2024, in Washington; as well as updates on the Company's larger portfolio of energy assistance and efficiency offerings.

To ensure the continued success and responsiveness of these initiatives, my testimony underscores our commitment to sustained and expanded resources—both financial and operational—to support the Company's energy equity and affordability commitments. These resources are essential to maintain program effectiveness, scale outreach, and adapt to evolving community needs and regulatory expectations. I also provide an update on the Company's Community and Equity Advisory Group ("CEAG"), and detail how engagement with and feedback from the CEAG is informing the Company's work. My testimony also details the Company's Washington Low Income Energy Efficiency ("WALIEE") Program, highlighting major projects to date.

Finally, I outline the Company's diversity, equity, and inclusion core values; and recent initiatives demonstrative of this commitment.

Q. Are you sponsoring any exhibits with your testimony?

A. Yes.

II. UPDATES FOR 2025 AND ONGOING PRIORITIES

Q. Please describe the evolving regulatory landscape.

NW Natural navigates a complex and broad landscape of regulatory dockets that emphasize equity and public participation in energy planning and utility operations. Since NW Natural's last general rate case in Washington (docket UG-200994, effective November 2021), the Washington Utilities and Transportation Commission ("WUTC" or "Commission") has advanced several key policies and Orders that reflect a sharpened focus on energy equity, affordability, and procedural justice. These developments shape the regulatory environment in which NW Natural operates, as well as the expectations placed on utilities to embed equity considerations into core planning, customer programs, operational frameworks, and engagement strategies. Legislative actions and dockets have focused on climate action and advancing energy equity in Washington. Notable recent developments include:

- WUTC Equity docket (docket A-230217)[1] represents a landmark effort to embed equity and justice within regulatory processes in Washington State. The Commission's recommendations emphasize equitable access to data, inclusive public participation, and language access planning. This multi-year proceeding was

[1] https://apiproxy.utc.wa.gov/cases/GetDocument?docID=54&year=2023&docketNumber=230217.

launched in response to legislative mandates such as the Clean Energy Transformation Act ("CETA"), the Climate Commitment Act ("CCA"), and the Healthy Environment for All ("HEAL") Act, all of which emphasize equitable outcomes for vulnerable communities. The docket is structured around four tenets of energy justice: distributional, procedural, recognition, and restorative justice. The first phase focused on procedural justice—analyzing decision-making processes and increasing collaboration with impacted communities to ensure proceedings are fair and inclusive for participants. Phase two will explore distributional equity. The Commission issued its Interim Policy Statement Regarding Procedural Justice ("Policy Statement") in the Procedural Justice phase on May 12, 2025.

- RCW 80.28.425(1)[2] broadened the Commission's authority to consider a wider range of public interest factors when evaluating multiyear rate plans. These factors explicitly include equity, environmental health, health and safety, economic development, and greenhouse gas emissions reductions, insofar as they affect the rates, services, and practices of regulated gas and electric utilities.
- In parallel, the Commission's Order 01 in docket UG-230739[3] approved NW Natural's proposal for a Residential Arrearage Management Program ("AMP"), offering income-qualified customers up to $1,500 in arrearage forgiveness every 24 months.

[2] RCW 80.28.425: Multiyear rate plan.

[3] UTC Case Docket Detail Page | UTC.

- Integrated Resource Plan (docket UG-230801): The 2025 Integrated Resource Plan ("IRP") emphasizes procedural justice, including enhanced public participation strategies and targeted engagement with underrepresented communities.
- NW Natural's Energy Assistance Program and Bill Discount Program (docket UG-240625)[4]: The Company revised its tariff Schedule L for it Gas Residential Energy Assistance Tariff ("GREAT") program to: 1) Expand bill assistance program income eligibility to 80 percent average median income ("AMI"), and 2) Clarify how benefits are applied when customers receive both federal energy assistance and the Bill Discount Program. Additionally, the Company revised tariff Schedule J for its residential bill discount program to extend eligibility for fixed-income customers to a four-year term (from two years).
- In 2024, Schedule I of UG-240074, the tariff that sets the terms and conditions of NW Natural's WALIEE Program, the per project allowance for health, safety, and repair ("HSR") measures increased by $4,000. HSR measures are measures that if not completed would adversely impact the safety and effectiveness of the energy efficiency measures or the health of the occupants.

Together, these developments underscore a dynamic and increasingly equity-focused regulatory environment. This shift requires utilities to demonstrate compliance with emerging mandates and to lead with clear intent, transparency, and meaningful engagement with the communities they serve.

[4] UTC Case Docket Detail Page | UTC.

Q. How does NW Natural address energy equity considerations in this case?

A. The Company acknowledges the pressing issue of energy burden and energy justice and remains steadfast in its commitment to ensuring that low-income and energy burdened customers, who often face the greatest challenges in affording their energy bills, receive the resources and attention they need. NW Natural also recognizes that broader policy and historical issues can impact equitable and affordable energy access. To this end, the Company is committed to focusing its resources and efforts on areas where it can make a direct and meaningful impact. And by concentrating on what the Company can influence—such as improving access to energy efficiency programs, designing and refining offerings to ease household natural gas burden, and enhancing community engagement practices, to name a few—it can make progress in advancing energy equity considerations and fulfilling its core responsibility to deliver safe, reliable, and affordable natural gas service to all customers.

Table 1 below offers a snapshot of NW Natural's energy equity and affordability centered portfolio that includes robust energy assistance offerings, energy efficiency resources, energy education information, and community philanthropy and engagement. The portfolio has grown significantly in the past few years—highlighted in the table below.

Table 1 – Energy Equity and Affordability Portfolio
(income-qualified program)***

New since last rate case	Offering/Initiative	Description
Y	Community Equity Advisory Group (CEAG)	Strengthen procedural equity practices; broaden engagement and participation in energy planning.
	Community Grants and partnerships	Support over 250 nonprofit organizations through NW Natural territory; community event support and programmatic outreach.
Y	Conservation Programs	Improve energy efficiency / reduce energy bills[5]; the Company's Behavioral Energy Efficiency program (BEE) provides home energy usage reports, tips for saving, and links to Company programs.
	Energy Education	Tools, programs and resources available to help customers lower bills; improve engagement, and understanding of role of utilities and programs, customer bills and charges, and safety.
Y	Energy Burden Assessment	Review of EBA findings; prioritization of recommendations; implications for program design.
	Gas Assistance Program* (GAP)	Company and employee funded energy assistance for customers in Oregon and Washington.
	Gas Residential Energy Assistance Tariff * (GREAT)	Bill assistance for income eligible Washington customers.
Y	Integrated Resource Planning (IRP) – Equity Considerations	2025 IRP is being developed with focus on equity and enhanced public participation/stakeholder engagement requirements.
Y	Residential Weatherization Kits	Improve energy efficiency and reduce energy bills through efficiency gains.
Y	Washington Arrearage Management Program* (AMP)	Supplemental grant program to cover past-due bills for lowest income customers.
Y	Washington Bill Discount Program* (2024)	Four-tiered program with highest discounts reserved for lowest income households to address energy burden and improve affordability.
	Washington Low Income Energy Efficiency* (WALIEE)	WALIEE finances whole-home retrofits, weatherization projects, high-efficient gas equipment, and energy literacy services for income-eligible customers.

† items marked with an asterisk indicate an income qualified program.

[5] https://www.nwnatural.com/-/media/nwnatural/pdfs/washington-tariff-book-summary/new-nwn-2024-25-beep-11-15-2023.pdf.

Q. Please describe the Company's goals, guiding principles, and strategies that define its approach to energy equity and affordability.

A. Collectively, the Company's equity work spans the following goals, guiding principles, and strategies in which it:

- Prioritizes measures that target the Company's lowest-income, highest-burdened customers;
- Develops and implement measures informed by robust data analysis and feedback from advisory groups;
- Pursues, vets, and prioritizes cost-effective solutions;
- Balances immediate support with longer-term strategies; and
- Regularly evaluates efforts and adjusts strategies as needed to maintain and enhance their effectiveness.

Q. How is NW Natural considering the cost implications of incorporating equity and affordability into the Company's strategy and program development?

A. The regulatory landscape is evolving, with a growing emphasis on equity and affordability. Energy equity considerations have emerged as dedicated topics in rate cases, and they now comprise a full chapter in NW Natural's IRP. The path to achieving regulatory compliance and advancing energy equity is complex and resource-intensive—necessitating substantial and deliberate investments in time, expertise, and personnel to manage and expand programs that address affordability and equity in utility services.

The Company is forced to make hard decisions and constantly balance the need to reduce energy burden for lowest earning households with the necessary costs that

this assistance has for all customers. Whether or not to offer a specific program or other type of resource or service is not determined nor weighed in isolation—but in the context of trade-offs that may impact other forms of support, such as deeper discounts or expanded eligibility thresholds. Ultimately, NW Natural's goal is to ensure that equity-focused investments are prudent, targeted, and reflect regulatory requirements and customer needs.

Since its last rate case, NW Natural has added numerous programs and services to help customers afford household natural gas costs, as demonstrated previously in Table 1. By securing the necessary resources and fostering a collaborative approach, the Company, along with its equity partners, can ensure efforts are authentic and impactful, and align with regulatory and policy goals.

Q. How is the Company evolving its resources to meet its commitment to energy equity and affordability?

A. The Company's commitment to energy equity and affordability has deepened significantly in the five years since its last Washington rate case. This evolution is not only a reflection of Company values, but it is a direct response to regulatory developments such as Commission orders and its policy statement regarding procedural equity, the EBA, and the implementation of the AMP under docket UG-230739.

The WUTC's evolving regulatory framework—anchored in docket A-230217 and RCW 80.28.425—requires natural gas utilities to operationalize equity across all aspects of planning, ratemaking, and customer engagement. Each tenet of equity requires new data systems, stakeholder engagement models, and internal capacity to interpret and act on community input.

There are several areas where the Company has developed resources and areas where it will continue to evolve.

- The Company added a new Energy Equity & Affordability Manager role to the Rates & Regulatory Team in 2024. This strategic investment reflects the evolving regulatory landscape and the increasing complexity of equity-centered work across our operations. The role is designed to ensure that our programs are not only responsive to community needs but also compliant with emerging regulatory expectations. In addition to program oversight, the role supports regulatory strategy, resource planning and testimony development, ensuring that equity considerations are embedded in rate case proceedings and policy design.

  NW Natural is currently filling a Data Scientist position that will support analyzing disconnection trends, arrearage data, and energy burden metrics to inform program adjustments. This will allow the Company to conduct data-informed outreach to households likely experiencing high energy burdens who are eligible for but not enrolled in the bill discount program.

- The Company is evaluating a more holistic departmental organization to (i) lead the administration of income-based programs such as WALIEE, the bill discount program, and the AMP, ensuring offerings remain responsive to community needs and compliant with regulatory requirements; and (ii) lead coordination of advisory groups, including the CEAG and the GREAT Advisory Group; and manage relevant public comment, processes, and facilitate inclusive engagement strategies.

The Company views these responsibilities as foundational to the Company's ability to deliver on the Commission's directives and its own commitments.

The WUTC's equity framework is reshaping the regulatory landscape for natural gas utilities. Meeting these expectations is not a matter of marginal adjustments—it requires transformational investment in people, systems, and community partnerships.

III. BILL DISCOUNT PROGRAM

Q. What is NW Natural's residential bill discount program?

A. NW Natural launched its Washington residential bill discount program for qualifying residential customers on January 1, 2024. Customers can qualify for up to an 80 percent discount on their monthly bill based on household size and income. The program features low barriers to participation that include auto-enrollment for customers who have received energy assistance, self-certification of income eligibility, and a tiered discount structure that provides larger discounts to households with lower incomes. Customers with income less than 80 percent of the Washington State median income qualify for assistance within the program's four tiers. Income thresholds and discounted tiers are provided in Table 2, below.

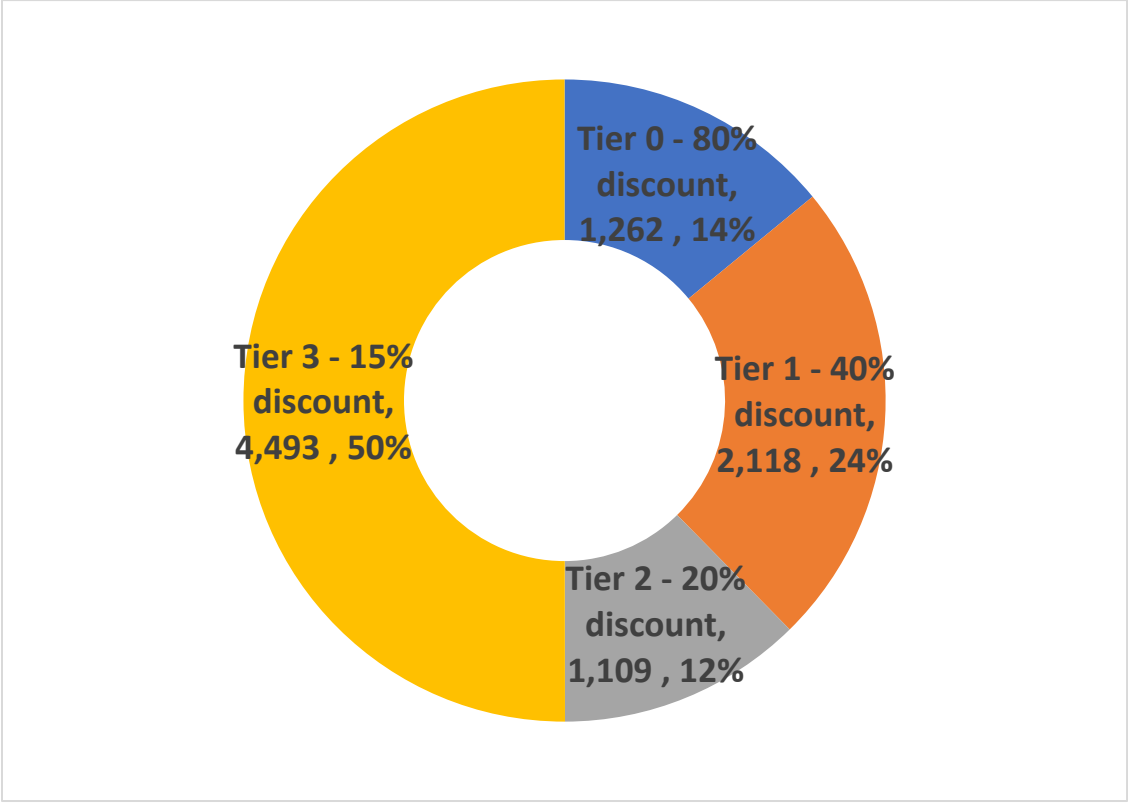
Table 2 – NW Natural Bill Discount Program Tiers

	Household Income Qualifying	Bill Discount Percentage
Tier 0	0-60% FPL	80%
Tier 1	61-120% FPL	40%
Tier 2	121%-150% FPL	20%
Tier 3	The greater of 151%-200% FPL or 80% AMI	15%

Q. What are recent enrollment figures for the bill discount program?

A. Enrollments in the Company's Washington bill discount program have grown steadily since it launched and continue to grow. In the first 17 months of the program, roughly 9,000[6] customers enrolled— representing half of the Company's pool of likely income-eligible customers in the State, as identified through the energy burden assessment. Table 3, below, shows enrollment in the bill discount program by discount tier as of May 2025.

Table 3 – NW Natural Bill Discount Program Enrollments by Discount Tier



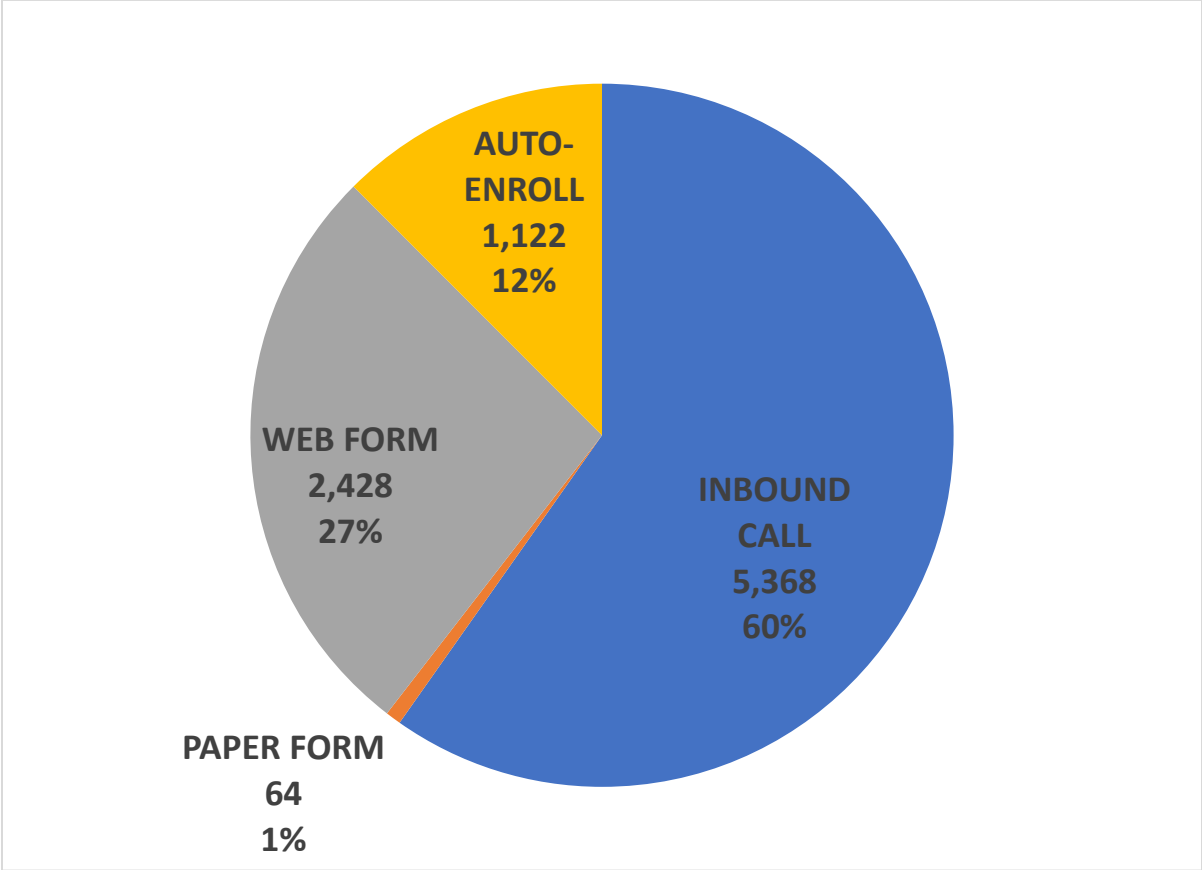
[6] Actual enrollments in the first 17 months: 8,982.

Q. How do customers enroll in the program?

A. The bill discount program has seen a successful uptake in participation thanks to the Program's auto-enrollment features, robust outreach strategies, and ease of entry. This has been echoed by customers, Community Action Agencies, and interested parties alike.

The bill discount program incorporates several inclusive and accessible enrollment practices designed to reduce barriers for eligible customers, as shown below in Table 4. One key feature is the automatic enrollment of customers who have received energy assistance or weatherization services. Any customer who accessed either of these services within the two years prior to the program's launch was automatically enrolled. And this practice continues—new recipients of these services are enrolled without needing to take further action. For those who need to apply manually, the process is intentionally simple and flexible. Customers can complete the application online, via email, by mailing a printed form, or by speaking directly with a NW Natural customer service representative over the phone. Importantly, the program does not require applicants to submit financial documents; instead, eligibility is verified through self-reported information on household size and annual income. There are no deadlines or enrollment windows, allowing customers to apply at any time through the method most convenient for them.

Table 4 –Bill Discount Program Enrollment Methods



Q. How is NW Natural leveraging relationships with community partners to promote outreach and engagement regarding energy assistance and bill discount offerings?

A. NW Natural works with community partners throughout its service territory, such as community action agencies, community-based organizations, affordable housing networks, places of worship, food banks, culturally specific organizations, and healthcare networks. Community partners share bill discount information through check-in calls with homebound seniors, neighborhood newsletters, food boxes, home weatherization kits, in-person events like farmer's markets, open houses, and community meetings---just to name a few. Leveraging these relationships is especially

meaningful and allows the Company to reach customers it may not otherwise have been able to reach and deliver bill discount program information from other important and trusted resources.

The Company tapped a wide network of nonprofit organizations, educational institutions, local governments, and service providers across its three Washington counties to disseminate information. This spanned: 200 K-12 schools in 30 districts, where approximately 80,000 students attend; 15 Head Start and Early Learning Centers, supporting outreach to families with young children; 15 public library branches, serving as high-traffic community hubs; 25 neighborhood newsletters, ensuring geographic coverage in urban and rural areas; and over 60 distinct community-based organizations, including food banks, housing authorities, health clinics, and faith-based institutions. These partners were selected for their deep community ties and their ability to reach priority populations, including low-income families, students, and seniors.

The Company developed an Outreach and Communications Toolkit,[7] which includes printable resources, digital materials, and other customizable content to streamline outreach efforts and allow for easy integration into existing channels of communication—allowing for external partners to choose what works best for who they serve and how. The Toolkit covers key program information like unique URLs to allow easy access to information, program and enrollment details to be disseminated, talking points to keep community partners informed and able to assist enrollment,

[7] Available at https://www.nwnatural.com/account/bill-discount-program/bill-discount-toolkit. The Toolkit is attached as Exh. CJT-4.

language and graphics to be used on social media, text messages, and newsletters to allow digital outreach, and brochures and posters that can be posted prominently to inform customers.

Feedback on our bill discount program materials has been overwhelmingly positive with partners noting appreciation for the accessible language, tailored to a 6th-8th grade reading level; the multi-language presentation covering the five most commonly used languages in our territory; and the inclusion of contact information for other utility bill discount programs.

Another important indicator of the success of NW Natural's innovative and creative outreach qualities is that peer utilities have modeled their own outreach efforts after NW Natural's and have called upon the expertise of Company staff to present on outreach recommendations. And outreach efforts are paying off: 60 percent of enrollments[8] are initiated by customers reaching out directly to NW Natural.

Additional outreach highlights include:

- A direct mail campaign to over 3,600 Washington customers, identified through the EBA as likely eligible and energy burdened, though not participating, was completed in Spring 2025. This is part of the Company's larger direct mail campaign to over 15,000 customers identified through the EBA.
- Proactive, cross-promotional activities: When customers access information about any income-based program, details on all income-based offerings are provided.

[8] 60 percent of bill discount program enrollments occur over the phone.

- In-person events:
  - The Company spearheaded a Winter Preparedness Fair in November 2024; the resource-rich event offered weatherization kits, a vaccine clinic, winter coats for kids, food boxes, and a bill discount sign-up station covering several utilities and services for income-eligible households (all at no cost).
  - The Company hosted a table at Clark PUD's 2025 Race for Warmth event and included information about income-based programs, including the bill discount program.
  - The Company was the headlining sponsor at the Clark County Fire Department #6 Open House on June 7, 2025, and hosted three tables on safety and preparedness, resource planning, and ways to reduce bills through energy efficiency, weatherization, and bill discount offerings.
- Currently underway is a brand new outreach strategy to leverage NW Natural's pay station kiosks in high traffic areas. Bill discount posters and postcards are being delivered to these pay stations in Washington (when and where feasible).

Q. Is the Company also advertising its income-based offerings?

A. Yes. These efforts are further supported by paid ads on local radio stations, including Spanish-language ads, and digital ads across various websites and social media platforms. NW Natural also prepares integrated communications plans annually, with the bill discount program prominently featured.

Q. Did NW Natural consider customers' household natural gas energy burden in the design of its bill discount program?

A. Yes. Table 5, below, from the Company's 2023 tariff filing introducing the bill discount program (docket UG-230739) illustrates the estimated impact on energy burden by bill discount tier. Discounts bring estimated energy burden below the threshold of 3 percent (or less).[9] The intent of targeting 3 percent is to minimize the energy burden related to natural gas service to less than half of the 6 percent that is commonly understood as the indicator of energy-burdened customers.

Table 5 – NW Natural Bill Discount Program Original Design Targeting 3 Percent Energy Burden (from UG-230739 filing)

Bill Discount Program Impacts, Assuming Household of 4:				
	Greater of 200% FPL or AMI 80% Tier 3 - 15%	FPL 150% Tier 2 - 20%	FPL 120% Tier 1 - 40%	FPL 60% Tier 0 - 80%
Income mid-point of tier	$67,601	$40,501	$27,001	$9,000
Average annual bill	$960.11	$960.11	$960.11	$960.11
Bill as % income before discount	1.4%	2.4%	3.6%	10.7%
Bill discount	$144.02	$192.02	$384.04	$768.09
Bill after discount	$816.09	$768.09	$576.07	$192.02
Bill as % income after discount	1.2%	1.9%	2.1%	2.1%

[9] See *In the Matter of the Petition of Northwest Natural Gas Company dba NW Natural, For a Revision to Northwest Natural Gas Company's Tariff WN U-6, Introducing Schedule L and Schedule 231*, Docket UG-230739 (Sept. 12, 2023).

IV. ENERGY BURDEN ASSESSMENT

Q. Has the Company completed an Energy Burden Assessment?

A. Yes. NW Natural engaged Empower Dataworks to conduct an Energy Burden Assessment[10] (EBA) in 2024. Empower Dataworks is a regional consulting firm that specializes in energy equity analytics and has performed similar assessments for numerous utilities throughout the Pacific Northwest. Three types of metrics were calculated in the Company's EBA:

(1) those related to energy burden based on demographic and geographic characteristics,

(2) participation in and funding levels for energy assistance programs (including GAP), and

(3) customer energy use characteristics.

NW Natural provided several customer-level datasets to Empower Dataworks (governed by a confidentiality agreement) to enable this analysis. Customer Information System ("CIS") data included monthly gas bills; on-time payment, late payment and disconnection notices; and customer accounts participating in the Company's bill discount program, other income-eligible energy assistance programs (OLGA, GREAT, GAP, OLIEE) and Low Income Home Energy Assistance Program ("LIHEAP"), along with discount levels and participation timeframes. The data

[10] The Company conducted a Low Income Needs Assessment ("LINA") in 2023. The LINA consisted of a compilation and analysis of relevant data to inform NW Natural's low-income programs in both Oregon and Washington. The Company revised and replaced its LINA with an updated assessment that aligned with workstreams outlined in Oregon docket UM 2211 which focused on the implementation of HB 2475. A complete EBA report and findings were submitted in OPUC docket UM 2211 on September 16, 2024. The EBA is available in Exh. CJT-3.

covered a 27-month period from January 2022 through March 2024 and reflected the most up to date and reliable data on customer billing, payment behavior, and participation in assistance programs available at that time. As time passes, the risk of data obsolescence increases; therefore, the Company is proposing to update the underlying datasets every four years to maintain the integrity of the analysis and ensure that programs align with customer needs.

Q. What is natural gas energy burden?[11]

A. Energy burden is defined as the percentage of gross household income spent on energy costs. Gas energy burden for a household is calculated by dividing annual gas expenses by gross household income. If a household spends more than 6 percent of their income on energy costs, they are considered energy burdened (or 3 percent on just gas), and if a household spends more than 10 percent of their income on energy costs, they are considered extremely energy burdened.

$$Gas\ Burden\ [\%] = \frac{Annual\ Gas\ Expenses\ [\$]}{Annual\ Household\ Income\ [\$]}$$

Q. What are some highlights from the Energy Burden Assessment?

A. Key findings from the Company's EBA[12] for its Washington customers[13] include:

[11] Low-Income Energy Affordability Data (LEAD) Tool Factsheet.

[12] Data pulled as of Q1 2024. This data included monthly gas bills for 27 months between January 2022 and March 2024, account numbers and service addresses. A separate data extract included the dates and customer accounts that received late payment and disconnection notices, allowing the Company to calculate the on-time payment rate for different customer segments.

[13] All estimates are specific to Washington customers unless explicitly noted otherwise.

- 23 percent of Washington's 78,000 customers (approximately 18,000) meet income guidelines.[14] This is a rate nearly double that of NW Natural's customer base in Oregon, and it is attributed to the higher income threshold in Washington's program. In Washington, the income threshold is the greater of 80 percent of the area median income or 200 percent of the federal poverty line. In Oregon, it is 60 percent of state median income.[15] In dollars alone, this translates to a $25,000 higher income threshold in Washington. Specifically, for a family of four, households that earn up to $94,400 are eligible for some level of discount. The same household would be required to earn just under $71,000 to be eligible for the bill discount program in Oregon.
- The Company's bill discount program is targeting customers most in need, evidenced by the highest participation rates in the lowest income tier[16] (Tier 0).
- Low- and non-low-income customers share similar average annual gas bills.
- Average and median household natural gas energy burden rates are 1.5 and 1.0 percent, respectively.

Additional summary metrics are provided in Table 6, below:

[14] NW Natural Washington Bill Discount Program - NW Natural.

[15] Payment assistance options for your natural gas bill - NW Natural.

[16] The EBA states that the goal of an effective energy assistance portfolio should be to prioritize the customers who most need the assistance, i.e. the customers exceeding the high burden thresholds. Page 17 NW Natural Energy Burden Assessment.

Table 6 – EBA Summary Metrics

Metric	Washington
Total # customers	78,000
% eligible	23%
Enrollment rate (among those eligible)	48%
Average gas burden (all customers)	1.5%
Median gas burden[17] (low-income customers)	1%
# of customers energy burden >3%	13,000 (estimate)
# of low-income customers energy burden >3%	10,000
Home vintage[18]	1980-Present: 85% 1940-1979: 11% Pre-1939: 4%

Q. How does the Company plan to use this information?

A. The EBA revealed early and healthy participation in the bill discount program—driven by strong partnerships, outreach and a streamlined enrollment design. It also uncovered pockets of need and opportunity to strengthen engagement and participation—including coastal/non-urban areas, households with high energy burdens, geographically and/or linguistically isolated customers, mobile home park residents, and households that have demonstrated difficulty paying their bills in the past (as evidenced by a past due notice and/or risk of disconnection).

In spring 2025, the Company launched a direct mail campaign to over 3,600 Washington customers who were identified through the EBA as likely eligible[19] for the bill discount program and experiencing household gas energy burden rates above 3

[17] NW Natural's median total energy burden, including an estimate of electricity burden, is between other rural and metropolitan regions in the Pacific Northwest.

[18] Older homes have more opportunities for weatherization, while newer homes could benefit more from lighting, controls and efficient appliances.

[19] Income eligibility is set at 80 percent of Area Median Income or 200 percent of the Federal Poverty Level (whichever is greater).

percent but not enrolled in the program. This effort is part of the Company's larger direct mail campaign to over 15,000 customers. A copy of the postcard is available in Exh. CJT-2.

V. OTHER ENERGY AFFORDABILITY PROGRAMS

Q. Please describe NW Natural's other income-based assistance programs.

A. NW Natural offers a broad set of resources, programs and services to help customers ease energy burden and better afford their natural gas bills. Income eligibility[20] is set at 80 percent of Area Median Income or 200 percent of the Federal Poverty Level (whichever is greater). These include:

- An Arrearage Management Program (AMP) which has delivered over $85,000 in instant grants since it launched on April 1, 2025.
- The Gas Residential Energy Assistance Tariff (GREAT) is a ratepayer-funded energy assistance program that launched in 2009. Roughly $620,000 in GREAT funds were distributed to 913 customers in the most recent program year (2023-2024)—surpassing previous year records in dollars allocated and customers served. GREAT assistance dollars provided in the 2024-2025 program year are expected to again exceed $500,000.
- The Washington Low-Income Energy Efficiency (WALIEE) is a no-cost, whole home weatherization program.
- The Gas Assistance Program (GAP) is a supplemental energy assistance program funded by NW Natural shareholders, employees, retirees, and customers; and

[20] NW Natural Bill Discount Program - NW Natural.

matched by the Company up to $60,000 annually. Funds are allocated directly to customers via a network of Community Action Agencies. The program has raised and delivered over $6.7 million to 60,000 customers in Washington and Oregon since it was established in 1982.

Q. Does NW Natural offer additional tools to assist with affordability?

A. Yes. The Company offers several payment plan options to help customers manage their monthly expenses. Equal Pay is an option that smooths out customers' bills over 12 months to make them more predictable; and the Company's Level Pay and Current Bill Plus plans offer more time and manageable payments for customers who need help with paying past due balances. In addition, through customer communications, including its website, NW Natural provides energy-saving solutions including tips on free fixes and low-cost home improvements.

Q. Is there also federal energy assistance available to customers?

A. Yes. The Low Income Home Energy Assistance Program[21] (LIHEAP) is a federally funded program that provides grants to eligible customers to assist with their energy bills.

LIHEAP is a discretionary program funded through the annual appropriations process. The budget reconciliation[22] signed into law on July 4th did not affect LIHEAP FY 2026 appropriations. Ultimately, LIHEAP funding will be determined through the regular appropriations process, which involves the passage of 12 annual funding bills.

[21] Low Income Home Energy Assistance Program (LIHEAP) | The Administration for Children and Families.

[22] Local Impacts from Congress' One, Big, Beautiful Bill - National League of Cities.

And while current administration has proposed eliminating the program, LIHEAP continues to enjoy strong bipartisan support, particularly among members of the House and Senate Appropriations Committees. As of July 2025, Congress has not finalized FY 2026 appropriations, and a continuing resolution is expected to maintain LIHEAP funding at the current level of $4.1 billion until full appropriations are passed.[23]

Q. How many customers do these programs reach?

A. Please see Tables 7 and 8, below, summarizing the past five program years for each of these programs:

Table 7 – Energy Affordability Program Expenditure History

	October 1 - September 30 Program Years			Calendar year 2024	
	GREAT	**WALIEE**	**LIHEAP**	**Bill Discount**	**Totals**
2019-20	$332,965	$190,457	$88,628	n/a	$612,050
2020-21	$399,849	$13,308	$95,060	n/a	$508,217
2021-22	$383,232	$54,960	$103,182	n/a	$541,374
2022-23	$416,667	$58,251	$178,532	n/a	$653,450
2023-24	$619,435	$82,396	$175,939	$1,229,259	$2,107,029
	$2,152,148	$399,372	$641,341	$1,229,259	$4,422,120

Table 8 - Energy Affordability Program Participation History

	October 1 - September 30 Program Years			December 2024 count	
	GREAT	**WALIEE**	**LIHEAP**	**Bill Discount**	**Totals**
2019-20	706	22	499	n/a	1,227
2020-21	811	3	581	n/a	1,395
2021-22	794	11	600	n/a	1,405
2022-23	785	11	839	n/a	1,635
2023-24	916	10	653	7,513	9,092
	4,012	57	3,172	7,513	14,754

[23] FY2026 LIHEAP Appropriations Testimony - NCLC.

Q. Please share how the Company's broader energy affordability offerings—such as arrearage management support, energy efficiency resources, and assistance grants—complement the bill discount program. Does the current design of the bill discount program remain effective in reducing energy burden for income-eligible customers?

A. Yes. The current design of the bill discount program continues to remain effective in reducing energy burdens for income eligible customers. The Company's EBA, completed in the summer of 2024, found that household natural gas energy burden at 2 percent (or below) would be an affordable, feasible, and meaningful threshold for NW Natural customers. Table 9, below, shows household natural gas energy burden rates below 2 percent for each tier after discounts have been applied—evidence that the program is bringing energy burden rates to an affordable level for eligible customers. Even modeling a hypothetical 25 percent increase in rates, the analysis indicates that current discount levels remain effective in achieving the target 2 percent threshold.

Table 9 – NW Natural Bill Discount Effectiveness Targeting 2 Percent Energy Burden

	Tier 3 Example	Tier 2 Example	Tier 1 Example	Tier 0 Example
NW Natural bill discount tier	15%	20%	40%	80%
average annual usage	662	662	662	662
annual bill	$807.35	$807.35	$807.35	$807.35
Mid point of income for the tier	$73,763	$43,403	$28,935	$9,645
Existing				
NW Natural bill discount	$121.10	$161.47	$322.94	$645.88
annual bill after bill discount	$686.24	$645.88	$484.41	$161.47
Annual Bill as a % of income before discount	1.1%	1.9%	2.8%	8.4%
Annual Bill as a % of income after discount	**0.9%**	**1.5%**	**1.7%**	**1.7%**
Rate case increase - illustrative	25.0%			
annual bill	$1,009.18	$1,009.18	$1,009.18	$1,009.18
NW Natural bill discount	$151.38	$201.84	$403.67	$807.35
annual bill after bill discount	$857.80	$807.35	$605.51	$201.84
Annual Bill as a % of income before discount	1.4%	2.3%	3.5%	10.5%
Annual Bill as a % of income after discount	**1.2%**	**1.9%**	**2.1%**	**2.1%**

In addition, eligible customers can participate in GREAT and/or LIHEAP, which provided an average benefit of $676 and $269, respectively, in the 2023-2024 program year. Thus, the bill discount program in concert with the GREAT, LIHEAP, WALIEE and AMP energy affordability programs continues to provide customers with effective solutions to reduce energy burden.

Q. What is the GREAT Advisory Group?

A. The Gas Residential Energy Assistance Tariff (GREAT) Advisory Group was established in August 2019 as part of a WUTC-adopted joint settlement agreement in NW Natural's general rate case, with goals to keep customers connected to natural gas service, provide energy assistance to more customers, lower the energy burden of participants, collect data to assess program effectiveness, and inform ongoing policy

discussions. NW Natural has been meeting with the GREAT Advisory group at least monthly; convening 20 times in 2024 and more than 10 times to date in 2025.

Q. Please share recent updates to the GREAT Program.

A. NW Natural worked collaboratively with the GREAT Advisory Group to enact the following recent changes:

- Increased income threshold for GREAT program eligibility to the greater of 80% AMI or 200% federal poverty level (FPL). This change allows for more customers to access energy assistance; it also aligns the GREAT program with income guidelines for Washington electric utilities (defined by RCW 19.405), as well as the Company's bill discount program income eligibility threshold.
- Extended the bill discount program enrollment period to four years (from two years) for eligible customers on fixed incomes.
- Created a process to collaborate with the GREAT Advisory Group to allow for increased spending above the $500,000 soft cap; this process was used successfully in 2024 and twice in 2025.
- Enacted the prioritization of tapping LIHEAP funds before a bill discount is applied when calculating a customer's bill in response to feedback[24] from the GREAT Advisory Group.

[24] LIHEAP funds are typically used first because of federal rules requiring that at least 90 percent be obligated within the same fiscal year. This creates a "use-it-or-lose-it" dynamic. Additionally, future LIHEAP allocations are often based on prior year spending, so fully utilizing funds helps secure future support. Strategically, LIHEAP is prioritized during peak heating seasons, while state and utility programs fill in during off-peak months to ensure year-round coverage.

- Designed, refined and launched a post-enrollment income verification ("PEV") process for bill discount program participants who enrolled through self-attestation. The Company engaged the GREAT Advisory Group and other community partners across its service territory—including those involved in NW Natural's parallel program development in Oregon, to identify and understand best practices for equitable, effective, and economical post-enrollment income verification. These practices were shaped to anticipate and mitigate potential barriers customers may face in providing documentation. The Company initiated the PEV process on April 1, 2025.

VI. WASHINGTON LOW-INCOME ENERGY EFFICIENCY

Q. Please describe NW Natural's Washington Low-Income Energy Efficiency program.

A. NW Natural's low-income energy efficiency program (WALIEE) is administered by community action agencies. The agencies provide weatherization services, health and safety repairs, and energy education services to qualifying customers at no charge. Program details are available in the Company's tariff Schedule I,[25] "Washington Low Income Energy Efficiency Program."

The goal of the low-income program is primarily to address underserved markets and customers that do not have access to energy efficiency incentive programs. For whole home efforts, WALIEE administrators leverage funds provided by other state, federal and local agencies. Those leveraged funds utilize Savings to Investment

[25] View Schedule I – WALIEE Program (PDF).

Ratio (SIR) tests or approved measure lists to meet cost-effectiveness requirements. Within NW Natural's southwest Washington service territory, Clark County serves as the primary community action agency and provider of income-based energy assistance and weatherization services. In Skamania and Klickitat counties, access to weatherization support is limited and service gaps persist. To address this, NW Natural has been working to identify and engage qualified partners capable of delivering services in these underserved areas. Recently, the Washington State Department of Commerce designated Northwest Community Action Center ("NCAC") as the new provider for low-income weatherization services in Skamania and Klickitat counties. NW Natural is currently in the process of establishing an agreement with NCAC to offer free energy efficiency retrofits to eligible NW Natural customers in the region.

Q. Are there updates to the WALIEE Program to share?

A. Yes. Recently, NW Natural has collaborated with local organizations in Skamania and Klickitat counties to distribute do-it-yourself (DIY) weatherization kits. The kits include door draft stoppers, window insulation kits, socket sealers, and other materials intended to provide temporary relief from home drafts. In addition to providing immediate benefits, these kits promote awareness of weatherization opportunities and connect customers to NW Natural's bill discount program.

In recent years, NW Natural funding has been predominantly allocated to furnace tune-ups and replacements. This is not a signal that broader weatherization efforts are being neglected. Rather, it reflects a deliberate sequencing strategy: federal funds are prioritized and spent first because current-year expenditures directly influence next year's budget allocations. By deploying federal dollars early, program

administrators reduce the risk of underutilization, which could otherwise result in reduced funding in subsequent cycles. This approach ensures that broader weatherization measures continue under complementary funding streams, like WALIEE, while preserving long-term program capacity.

In 2024, with input from our stakeholders, including Clark County Community Action Agency and the Energy Efficiency Advisory Group ("EEAG"), NW Natural championed for and secured additional program funding for whole home weatherization projects. Recognizing the critical need for additional health and safety funds to help homes meet the necessary standards for weatherization, NW Natural implemented a $4,000 flexible spending increase per year, per project. This funding can be used to support essential health and safety measures and/or additional energy efficiency improvements.

In 2024, NW Natural completed an impact and process evaluation of its low-income energy efficiency programs. The evaluation found that participating customers are realizing average energy bill savings of 16%-18% along with an annual reduction in arrearages of approximately $213.

The Company's EBA identified approximately 10,000 high-burden, low-income customers within the southwest Washington service territory, including a pool of 1,200 households eligible for free energy efficiency services. The findings highlight opportunities to deliver impactful energy efficiency upgrades in the region. And with the recent addition of a new partner in Skamania and Klickitat counties (as well as efforts to identify and engage new partners), the Company plans to implement a

targeted outreach strategy to engage eligible households in these areas as identified by the EBA.

Q. What is NW Natural's Energy Efficiency Advisory Group?

A. NW Natural's Energy Efficiency Advisory Group was established in 2009 to provide guidance and oversight of the Company's energy efficiency programs and pilot offerings in Washington. The EEAG is comprised of representatives from the WUTC, Washington Public Counsel, Northwest Energy Coalition, Alliance of Western Energy Consumes, The Energy Project, and program staff. Quarterly calls are held to review current program activity and seek guidance on proposed program changes or strategies.

VII. COMMUNITY EQUITY ADVISORY GROUP

Q. Please describe NW Natural's Community Equity Advisory Group.

A. The CEAG is an extension of existing community engagement priorities at NW Natural and a natural outgrowth of NW Natural's commitment to enhancing energy equity and easing energy burden for our most vulnerable customers. From a place of listening and learning, the CEAG seeks out and elevates historically underrepresented voices, perspectives, and lived experiences to advance inclusive practices and institutional actions and bring a racial equity and environmental justice lens to NW Natural's energy and operational planning. NW Natural holds quarterly CEAG discussions with its members on specific topics related to equity, energy justice, or other topics of interest related to NW Natural's operations and energy services. More information about the CEAG can be found on the Company website.[26]

[26] Available at https://www.nwnatural.com/about-us/community/caring, the CEAG Charter and Operating Guidelines document is attached as Exh. CJT-5.

The purpose of the CEAG is to provide NW Natural direct feedback, recommendations, advice, and review on areas related to (a) system planning and renewable resource development, (b) low-income programs, (c) arrearage programs, (d) Company-sponsored philanthropic investments, and (e) other areas as determined by the CEAG and NW Natural.

Q. How is NW Natural demonstrating its commitment to advancing equity through the CEAG?

A. NW Natural is committed to an authentic and effective process: a core tenet of the group is to solicit ideas and encourage engagement from new perspectives, voices, and lived experiences in an authentic, non-extractive way. The Company recognizes that the true value of the CEAG lies in its ability to bring forth diverse perspectives, voices, and lived experiences in a manner that is genuine and non-extractive. This approach helps the Company avoid the pitfalls of diversity, equity, and inclusion work that can often become transactional and performative.

Quarterly meetings are meticulously planned to focus on concrete, actionable items that directly impact households. This strategy ensures that our discussions are not only relevant but also meaningful to the communities the Company serves. By centering our meetings on issues with a direct household impact, the Company creates a space where members can see the tangible effects of their contributions. Questions like "What is the direct impact this topic or issue will have on the household?" and "How will this impact me and my family?" guide our topic selection process. This approach is based on direct feedback from the CEAG. People are busy and overwhelmed, so when the Company asks for their time and feedback, it must be on

something that has a tangible impact and influence in their lives. This ensures that their participation is both valuable and relevant.

Q. What are other examples of the equity-lens approach the Company took in building the CEAG?

A. Other examples of NW Natural's approach include:

- Centering quarterly meetings on concrete, actionable asks of the advisory group—an approach that demands clear expectations, thoughtful planning, and ongoing dialogue.
- Compensating organizations for their time, expertise, and engagement; organizations receive $5,000 per year and the estimated time requirement for the year is 30 hours (rate of $160/hour which is on par with similar types of consulting services).
- Hiring a third-party consultant to lead meetings, advise, and ensure responsiveness and accountability; NW Natural utilizes best practices and guidance from the third-party consultant to develop processes of documentation and response to advisory items brought forward by the CEAG.
- Formalizing feedback and accountability measures with respect to CEAG input: at each CEAG meeting, NW Natural provides a detailed report to the CEAG on topics such as the concrete actions, deliverables, and milestones achieved that were undertaken or achieved since the last meeting and under the recommendations from CEAG members.
- Sourcing meeting topics based on feedback from CEAG members.

- Recruiting culturally specific organizations not currently involved in the energy justice sphere.

Q. Please provide a recent example of how CEAG feedback is being used.

A. A notable highlight of the year was CEAG engagement in the development of the Company's 2025 IRP. Enhancements to public participation in the IRP process play an important role in advancing equity principles and updates to the 2025 IRP center on strengthening inclusive and meaningful engagement in the development of the IRP—core elements of procedural justice and equity, and aligned with the first phase of WUTC's Equity Docket, to analyze decision-making processes and ensure proceedings are fair and inclusive for participants.[27] The 2025 IRP is the first of NW Natural's IRPs to incorporate CEAG feedback into its processes.

In August 2023, CEAG member organizations were introduced to Integrated Resource Planning through short vignettes about NW Natural operations. The intended type of engagement during this session was informational and served as a foundation for future meetings. This introduction to resource planning built upon prior CEAG meeting topics in which the Company's presentations covered its regulatory requirements; stakeholders traditionally involved in its public proceedings; and the meaning and implications of energy planning, affordability and equity.

During the February 2024 CEAG session, the IRP team reviewed the current IRP process (including both NW Natural-led and Commission-led portions) and past stakeholder engagement. CEAG members were provided an IRP public engagement

[27] UTC Equity Docket.

proposal document one week in advance of the meeting for review. This document provided an overview of the IRP purpose and content, historical practices for public engagement opportunities during the IRP process, a proposal for changes in the process, and a request that members come prepared to discuss and provide feedback. As has become standard practice for CEAG materials, this document was written in plain language and translated into Spanish.[28]

The IRP team guided CEAG members through proposed adjustments to the IRP public engagement process to enhance procedural equity considerations, with each proposal discussed in detail. Finally, the group discussed if, and how, the new proposal moved the Company in the direction of improving procedural equity and justice. CEAG members highlighted the need for a community-based, family-friendly event that provides tangible, meaningful resources. They emphasized partnering with trusted organizations, expanding the event's focus beyond energy planning, and scheduling it to accommodate working families and public transportation users.

With these recommendations in mind, the Company dedicated the August 2024 CEAG meeting to several key aspects of energy planning and the importance of the IRP in ensuring NW Natural's capacity to meet energy demands during extreme weather events. The Company emphasized that while the IRP is a dense and technical document, its influence shows up in our daily lives—pointing to uninterrupted gas service during the January 2024 cold snap to illustrate the everyday relevance of the IRP. When temperatures dropped significantly and demands on both the electric

[28] The Company offers translation into any language by request and has received consistent requests for Spanish language materials.

system and gas infrastructure were pushed to their limits, NW Natural was still able to deliver gas to its customers without interruption. This event underscored the IRP's role as a strategic roadmap that guides NW Natural in planning for and managing such extreme weather events; ensuring that NW Natural can maintain service reliability and safety, even during periods of high demand. The Company provided a progress report on its public participation enhancements, highlighting progress made on the IRP Fair concept that stemmed from the CEAG earlier that year.

Q. Please describe the Winter Preparedness Fair.

A. The IRP Fair was borne out of CEAG engagement that centered on ways to enhance procedural equity practices and public engagement opportunities in the development of the IRP. The Fair, held on November 16, 2024, was a comprehensive, resource-rich event that offered weatherization kits, a vaccine clinic, winter coats for kids, food boxes, a bill discount sign-up station covering several utilities and services for income-eligible households (all at no cost)—as well as took early steps to enhance awareness of energy planning and ultimately increase informed participation in energy planning in the future.

NW Natural partnered with Community Services Network and the City of Portland Bureau of Planning and Sustainability to bring this event to the community on November 16th at Parkrose High School. Approximately 45 community-based groups hosted tables at the Fair; and an estimated 850 people attended (representing nearly 2,000 total household members). The flyer for the Fair is included as Exh. CJT-6.

More recently, NW Natural hosted a set of interactive tables at the Clark County Fire District Open House/ Get Ready Community Event on June 7, 2025. These tables

featured information on energy planning, safety, weatherization, and the bill discount program. NW Natural representatives actively engaged with attendees to raise awareness about Energy Planning—including what it entails and how community members can get involved—as well as the public comment period for the draft IRP. Materials were presented in plain language in multiple languages including English, Spanish, Vietnamese, Russian, and Simplified Chinese to ensure accessibility. As part of its outreach efforts, NW Natural also distributed 65 weatherization kits to attendees, providing tangible support for home energy efficiency.

VIII. NW NATURAL'S EFFORTS TO ADDRESS DIVERSITY, EQUITY, AND INCLUSION

Q. What is NW Natural's philosophy regarding diversity, equity, and inclusion?

A. At NW Natural, diversity, equity and inclusion are core to our success and embedded in all aspects of our work, from the way the Company hires and operates every day, to the biggest decisions the Company makes as a business. The Company recognizes the interconnectedness of its actions with the well-being of its customers, communities and planet and is committed to a forward-thinking and strategic approach to equity.

As an employer, the Company strives to advance diversity, equity and inclusion to support its colleagues, customers, contractors, suppliers and community members, regardless of race, gender, color, sexual orientation, age, religion, national origin, or physical or mental disability, so everyone has an equal opportunity to thrive, engage, and belong. NW Natural's commitment to equity, diversity, and inclusion advances its culture and business success.

NW Natural's CEO and Officer team, in partnership with its DE&I Council, defined the following commitments:

- Reinforce our zero-tolerance policy for racism and discrimination at NW Natural;
- Hold listening sessions to understand the experience and needs of Black, Indigenous and People of Color ("BIPOC") employees;
- Foster an inclusive and diverse culture/workforce in our existing employee population;
- Recruit more diversity into NW Natural, focusing on BIPOC, female, trans, and non-binary talent, as well as people with disabilities;
- Assess and expand our ability to work with diverse suppliers, and increase the positive impact on our diverse supplier network;
- Foster diversity, equity and inclusion in our communities through partnerships, volunteering, and financial support; and
- Ensure all customers have equitable access to natural gas programs and resources.
- Through NW Natural's Diversity, Equity and Inclusion Council, which has championed equity and inclusion in the Company and community for 20 years, the Company continues to grow our Employee Resource Groups ("ERGs"). A quarter of NW Natural employees are connected to an ERG. ERGs offer our employees the opportunity to influence our workplace culture: African American ERG, Allyship ERG, Asian American Network, Somos Unidos (LatinX ERG), Rainbow Alliance (LGBTQ+ ERG), Women's Network, and Veterans ERG. NW Natural is

also proud to offer a Neurodiversity ERG, which is one of the first of its kind for U.S. utilities.

Deepening and expanding relationships with a diverse supplier base are integral to the Company's corporate culture and strategy and procurement spending for women owned, minority owned, veteran owned, and small business continues to grow. In 2022, the Company laid the foundation to build out this capacity; and doubled its purchasing spend with diverse suppliers in 2023. The Company is also proud to report that it continued to increase investments with diverse suppliers to $51,888,094 in 2024, which was about 11 percent of the Company's total spend.

Additionally, charitable investments and partnerships help create safe, healthy, and thriving communities where the Company's employees live and work. Through NW Natural's matching gifts program, the Company matched the time and dollars employees gave to the organizations they care about most. The Company provided $1,273,077 of support for organizations that serve its southwest Washington and Oregon service territories. Nineteen percent of our total philanthropic giving went to organizations whose primary mission is furthering needs of communities of color or other marginalized groups.

Q. Does this conclude your Direct Testimony?

A. Yes.

1. METHODOLOGY

1.1 GENERAL APPROACH

This energy burden assessment relies on collecting customer-level data, modeling missing attributes, then aggregating key metrics by geographic, demographic or building variables for analysis. Prior to this project, Empower Dataworks performed energy burden assessments in over 15 utility service areas (both gas and electric) using this approach. The methodology is also updated occasionally to align with energy assistance best practices. The energy burden assessment results are typically used to guide program design, evaluate the performance of energy assistance programs and develop targeted marketing and outreach strategies.

The customer data (including estimated household income) comes from various sources as described in the rest of Section 1. Some demographic attributes were modeled or inferred using statistical techniques due to lack of primary data in the Customer Information System (CIS) or other sources. American Community Survey data was mainly used to sanity check aggregate statistics of customer-level data at the census tract level.

Three types of metrics were calculated:

- Metrics related to energy burden based on demographic and geographic characteristics
- Participation and funding in Energy Assistance Programs
- Customer energy use characteristics

The final dataset and results were provided to NWN staff.

1.2 DATA SOURCES

The data sources leveraged for the analysis are described in this section.

DATA PROVIDED BY NWN

NWN provided various customer-level datasets to Empower Dataworks to enable this analysis. Data sharing was governed by a confidentiality agreement between Empower Dataworks and NWN. Empower Dataworks was also subject to various cybersecurity requirements to safeguard customer data.

Customer Information System (CIS): This data included monthly gas bills for 27 months between January 2022 and March 2024, account numbers and service addresses. A separate data extract included the dates and customer accounts that received late payment and disconnection notices, allowing us to calculate the on-time payment rate for different customer segments.

Direct Assistance Program Data: We received a list of participating accounts in the Bill Discount Program (BDP), other NWN low-income programs (OLGA, GREAT, GAP, LIEE), and LIHEAP between January 2022 and March 2024, along with discount amounts and dates. This allowed us to calculate the total assistance funding at the household level.

Demographic Data: Demographic data was procured from a third-party data compiler that aggregates data from a variety of sources. This data was mapped to the CIS dataset using customer addresses and included estimated household income, and homeownership status for most residential households. Demographic attributes for some customers were modeled due to lack of primary data in CIS or other sources. The modeling approaches are described in the next section.

DATA OBTAINED FROM OTHER SOURCES

Geocoding: We mapped the latitude/longitude of customer premises to census tracts, block groups and blocks in order to pull additional aggregate statistics.

County Assessor Data: We obtained publicly available assessor data from all counties in NWN's service area. The data from most assessors included appraised values for homes, square footage, building year built, land use codes (residential, mobile homes, commercial and industrial), and other minor data points that were useful for performing general QA.

The addresses in this dataset were standardized to US Postal Service format, then matched with addresses in the CIS data. Some addresses existed in the CIS data but not in the assessor data (typically happens when multiple buildings occupy the same land parcel).

American Community Survey (ACS): ACS data (2018-22 5 year averages) was primarily used for QA to ensure that aggregate counts for various demographic attributes match the expected distributions from ACS.

1.3 FINAL ATTRIBUTES AND METRICS

The calculation methods for the metrics and attributes used in this report are described in this section. For all attributes, we also captured metadata related to the source of data and the confidence in the value (for example, data from primary sources has a high confidence, while modeled data has lower confidence). All of the data is robust for aggregate analysis, while high confidence data is better suited to customer-level marketing and program targeting.

Household Income: Estimated household incomes were obtained using three methods: (i) self-attested incomes for program participants, (ii) third-party purchased and calibrated demographic data, and (iii) modeled income for households with missing data. Self-attested household income was available for about 45,000 households that had participated in the BDP and declared their household income. Third-party estimated income data is sourced from public or commercially available data sources. Since household income from data vendors can become outdated quickly, we adjusted the unverified household incomes by a constant percent, so that the median household income in each county matched the median household income from the DOE LEAD tool and the Federal Reserve's FRED tool. For households with missing income data, an estimated income was calculated as the average of the incomes of the five geographically closest households.

Poverty Status: The number of people living in a household cannot be easily obtained from any public data sources. This makes it difficult to identify a household's poverty status compared to the State Median Income, which is defined by household size. According to the Census Bureau, the median household size in the NWN counties varies from 2.2 to 2.8. In general, we used the income limits for two person households in this analysis as they produced the best estimates of state median income tiers compared to the DOE LEAD tool.

Validation: According to the DOE LEAD tool, between 10-18% of gas-heat households in the four largest Oregon counties served by NWN would fall under 60% of the State Median Income. In this assessment, the county poverty rates range from 9-17% (with an approximately

10% margin of error), which is within the census range. The LEAD tool estimates that 24% of gas-heat customers in Clark County, WA fall under 80% of the Area Median Income, compared to 23% estimated through this assessment.

Building type: Meters were classified into one of five building types: single family, mobile homes, multifamily apartments, commercial or master metered and unoccupied. Commercial meters were those tagged with a specific commercial use by the county assessor or that were on a commercial rate class. Additionally, we filtered out meters using in excess of 3,600 Therms per year as those are likely associated with commercial uses or are master metered. Meters that showed energy consumption less than 60 Therms/year were flagged as potentially unoccupied or vacation homes.

Overall, the number of residential meters was 706,000. When excluding high-use and low-use outliers (suspected seasonal, unoccupied or master-metered), the final number of occupied households for the analysis was approximately 645,000 (567k in OR, 78k in WA). NWN provided internal data to identify single family and multifamily building types – this was used in conjunction with county assessor land use codes to categorize building types.

Validation: The aggregate housing type counts (85-89% single family) are very similar to data from the DOE LEAD tool for the five largest counties in NWN's service area.

Homeownership Status: Some homeownership data (rent vs. own) was available from NWN and the third party demographic dataset. For the remainder, households in multifamily apartments were tagged as "Likely Renters", and households without any account changes during the two year analysis period were tagged as "Likely Homeowners".

Validation: The owner-occupied housing rate from the DOE LEAD tool for the five largest counties in NWN's service area (80-85%) is slightly lower than the homeownership rate from this analysis (85-90%).

Energy Burden and Energy Efficiency Potential thresholds: These thresholds were set as follows:

- High-burden threshold: Greater than 2% in marine climate counties and greater than 3% in cold climate counties – using climate zones defined by DOE. Cold climate counties (1% of households): Hood River, Wasco (OR), Klickitat, Skamania (WA).
- High efficiency potential threshold: Greater than 0.6 therms/sq.ft.

Gas Burden: Gas energy burden for a household is calculated simply by dividing annual gas expenses by gross household income.

$$Gas\ Burden\ [\%] = \frac{Annual\ Gas\ Expenses\ [\$]}{Annual\ Household\ Income\ [\$]}$$

Excess Burden: Excess burden is the portion of a household's gas burden in excess of the high burden threshold.

$$\begin{aligned} Excess\ Burden\ [\$] \\ &= \max(0, Energy\ Burden\ [\%] \\ &\quad - High\ Burden\ Threshold[\%]) \\ &\quad \times Annual\ Household\ Income[\$] \end{aligned}$$

On-Time Payment Rate: This is the proportion of all energy bills that did not require a late payment or disconnect notice to be sent out.

Energy Assistance Funding: The dollar amount of funding flowing through energy assistance programs (including discount, donation and weatherization programs) through discounts or rebates.

Customer Bill Reductions (**Avoided Burden**)**:** The total bill impact (in dollars) from energy assistance programs.

Avoided Need: The total bill impact (in dollars) from energy assistance programs, specifically for program participants flagged as "high-burden". Bill impact is equal to the amount of assistance grants or discounts for direct assistance programs and is equal to measure savings (therms/year) multiplied by the residential therms rate ($/therms) for energy efficiency programs.

Census Tract Statistics: Since each customer has been mapped to a census tract and block group, we are also able to match customers to census tract average statistics (e.g. highly impacted communities, presence of children, non-English speakers, education level, environmental pollution etc.).

Energy Assistance Need: This is the sum of excess burden across all customers.

2024 Projections: Since NWN customers experienced a rate change in November 2023, some figures in this assessment related to need and energy burden are projections for 2024 including the impact of the rate change. The 2024 energy bills were projected by using the 2023 energy usage for customers and applying the 2024 rate structure. 2024 household incomes were estimated by adding a 7% multiplier to the estimated 2023 household incomes (LIHEAP applied a 7% income adjustment to their 2024 income guidelines compared to 2023). This will be noted where relevant.

1.4 SOURCES OF UNCERTAINTY

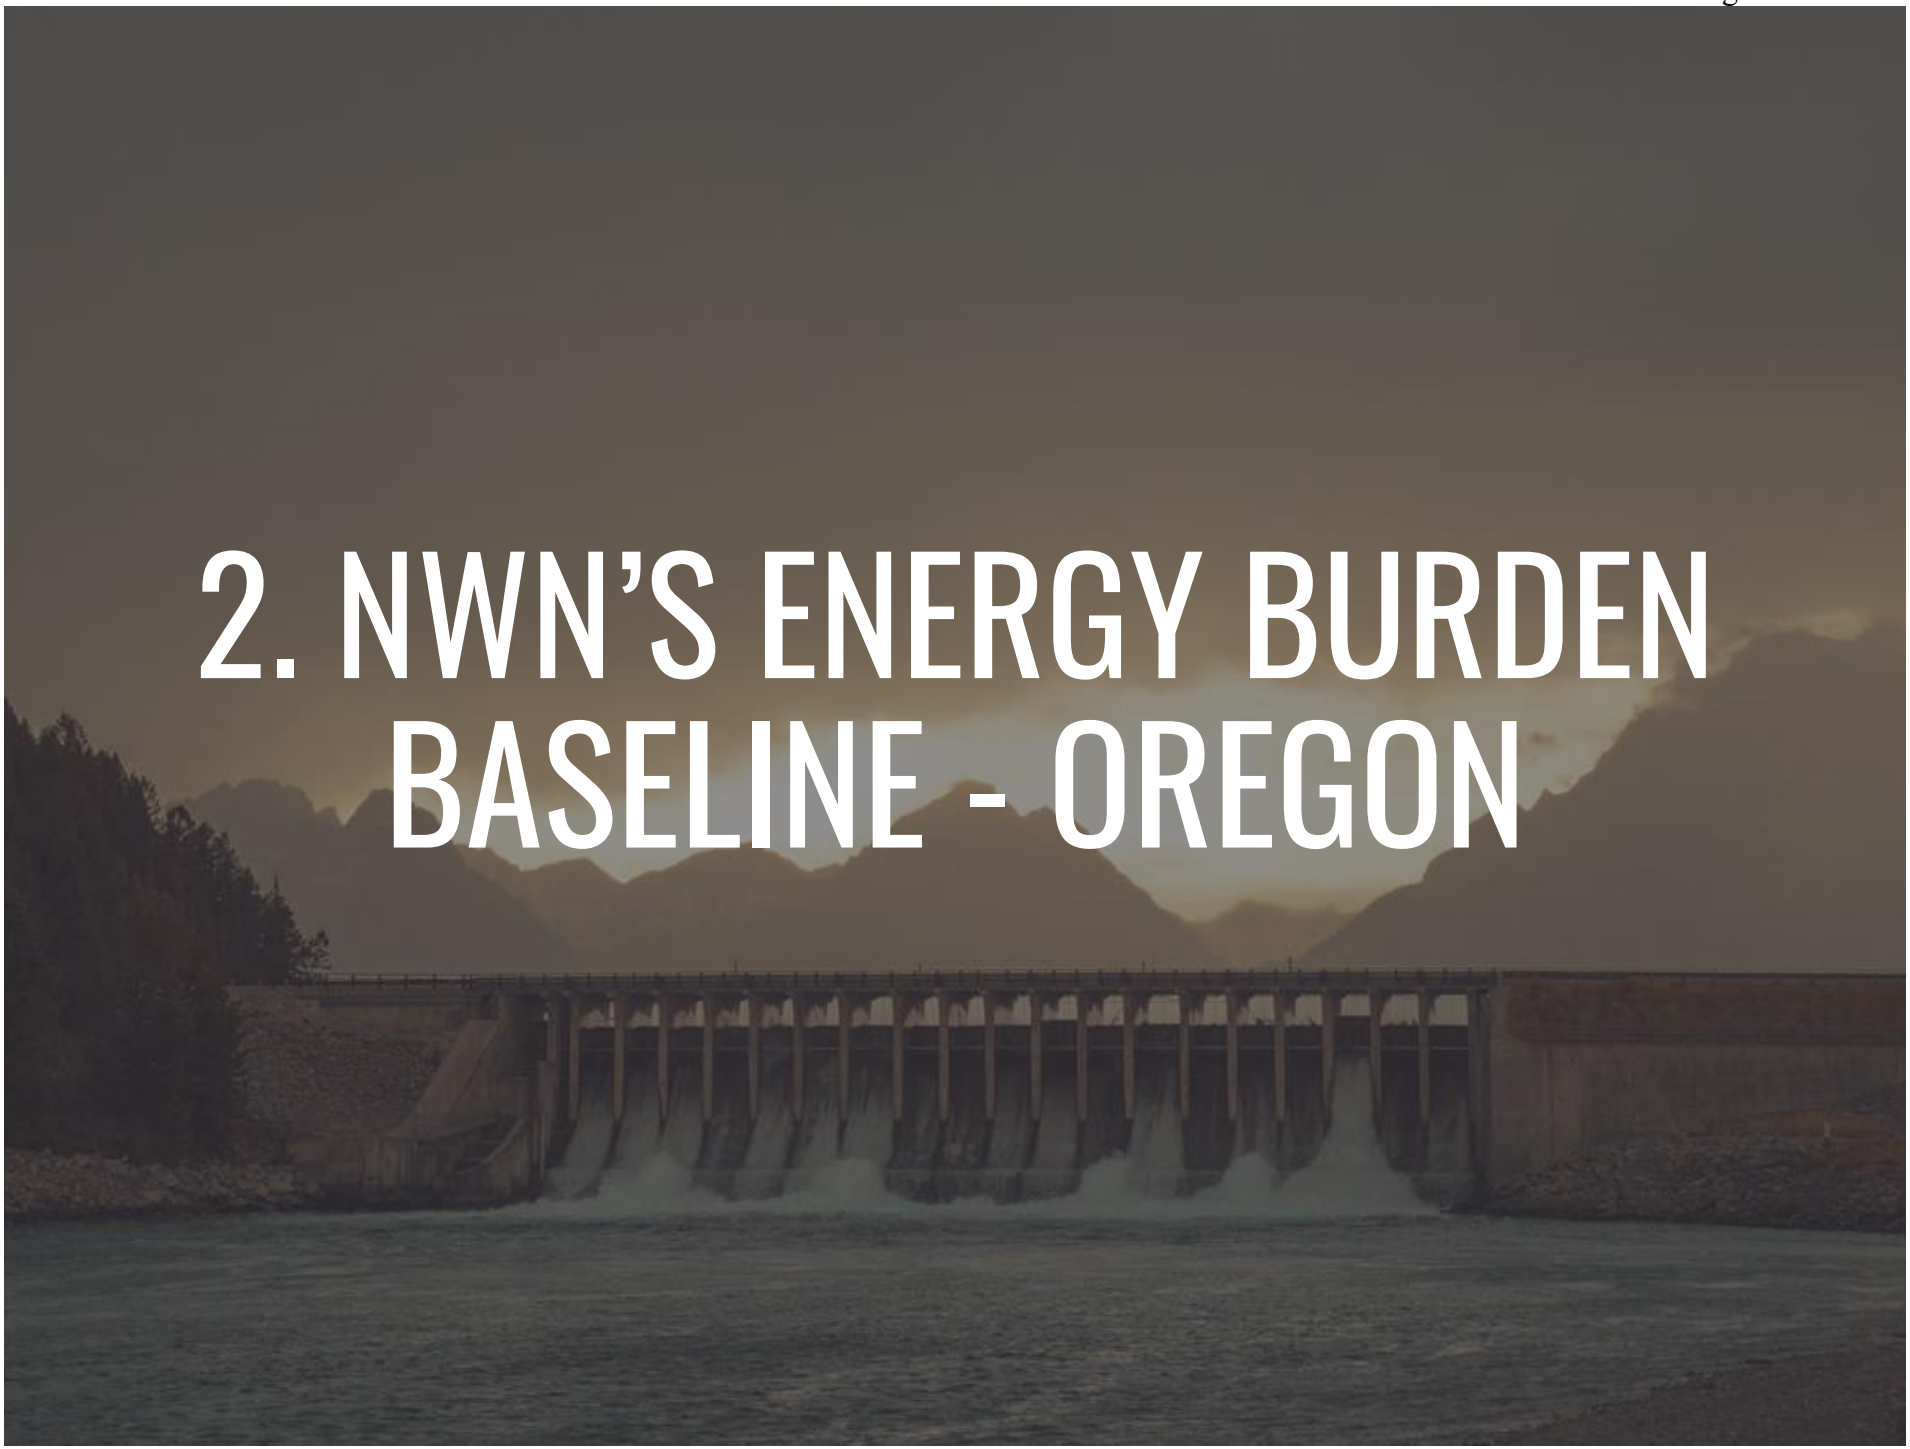
- **Household income** is a dynamic piece of data as residents move in and out of homes and income data can become outdated within a year or two.

- **Poverty status.** Since household size cannot be reliably captured through any available data source, household poverty status is subject to uncertainty. The State Median Income uses household size as a scaling factor. In this analysis, we have used income thresholds for 2-person households for consistency and clarity, but they may under-estimate or over-estimate the actual income eligibility depending on the actual sizes of low-income households in this service area.

- **Individual vs. aggregate data usage.** The underlying dataset has customer-level flags for data quality – data from primary sources is considered high quality while modeled data is considered medium or low quality, depending on the availability of supporting sources of information (example, home values and location). Higher quality data can be used for individual program targeting, lower quality data can be used for program design and aggregate reporting.

- **Building types.** There is some uncertainty in the classification of building types as described in Section 1.3. This could results in misclassifying non-residential meters as occupied households or single family/mobile homes as multifamily.

- **Achievable reductions in energy assistance need.** This analysis presents a *technical* energy assistance need based on energy burden. However, in our experience with energy assistance programs in general, many customers may not participate in programs, regardless of program design or available benefits due to a variety of barriers like access to information, application process difficulties, stigma and lack of trust. Understanding the *economically achievable* reduction in energy assistance need through utility programs would require a qualitative research of non-participants in a utility's service area.



2. NWN'S ENERGY BURDEN BASELINE - OREGON

2.1 NWN RESIDENTIAL SECTOR PROFILE - OR

NWN's service territory in Oregon was composed of approximately **567,000 occupied households** in 2023 (exceeding a minimal level of 60 therms/year of energy use and not exceeding 3,600 therms/year).

Ethnicity: According to the U.S. Census Bureau, approximately 62-78% of residents in NWN's largest counties are non-Hispanic white.

Household Income: The median household income for residents in NWN's service area was approximately $114,000 in 2024, significantly higher than the state median. Approximately **12.5%** of residents would fall under 60% of the State Median Income (see table on following page for SMI values). An additional 13% of households earn between 60-100% of the state median income. These "borderline" customers would be ineligible for almost all energy assistance programs, but may still bear a relatively high level of energy burden. Designs for programs that are ratepayer-funded should take into account the degree of additional burden that would be imposed on these customers.

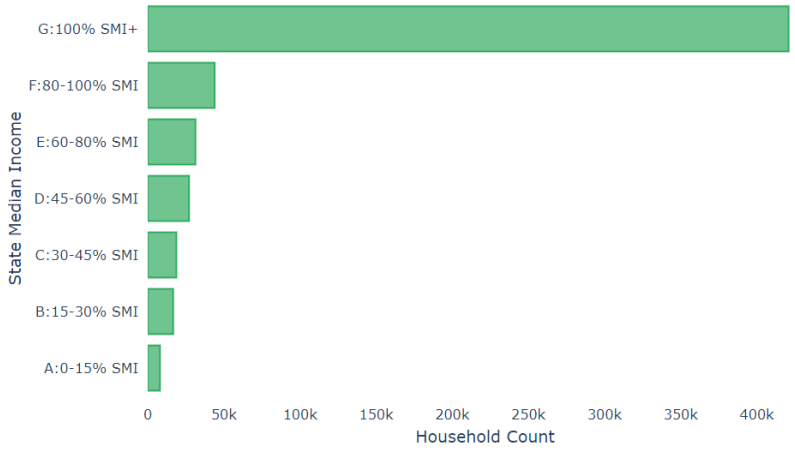


Figure 1. Distribution of households by household income as a percent of state median income for NWN residential customers

	60% of Annual State Median Income (SMI)	
Household Size	**2023**	**2024**
1	$31,266	$33,427
2	$40,886	$43,712
3	$50,506	$53,997
4	$60,126	$64,282
5	$69,747	$74,567
6	$79,367	$84,852
Each additional member	$1,803	$1,929

Energy Bills: NWN's residential volumetric gas rates in 2024 were about average for the region, and the basic charge is relatively low. Annual gas bills average **approximately $1,100/year (2024 projection) with an average annual consumption of 720 therms**. Figure 2 shows the distribution of annual gas bills.

Home Vintage: Of the homes with a known age, approximately 48% were built after 1980, 36% were built between 1940 and 1980, with the remainder built prior to 1940. Older homes have more opportunities for weatherization, while newer homes could benefit more from lighting, controls and efficient appliances.

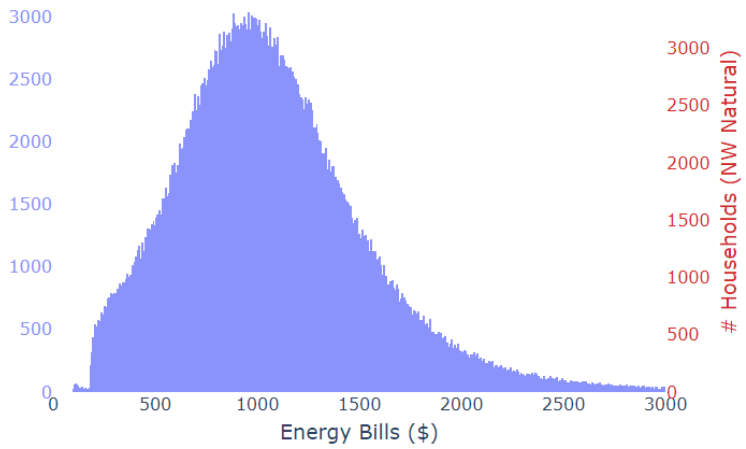

Figure 2. 2024 Household gas bill distribution for NWN residential customers in Oregon

2.2 ENERGY BURDEN

NWN customers in Oregon have an **average and median gas energy burden of 1.4% and 0.9%**, respectively. Figure 3 compares NWN's median total energy burden (including an estimate of electricity burden) to values published in other jurisdictions. The median burden is between other rural and metropolitan regions in the Pacific Northwest.

The average household will pay $1,100/year in gas bills in 2024. Of 567,000 identified households, **75,000 were deemed to have a high energy burden**, of which an estimated 50,000 would fall under 60% State Median income - meaning that annual gas bills exceeded 2/3% of their income, depending on their climate zone. Low-income high-burden customers paid an average of $1,100 in annual gas bills as well; indicating that the high burden is driven by low incomes rather than high gas usage. The **total energy assistance need for NWN customers in Oregon is approximately $38M across all incomes and $29M in households that earn under 60% SMI**—this is the total reduction that would bring all customer gas bills below the high burden threshold.

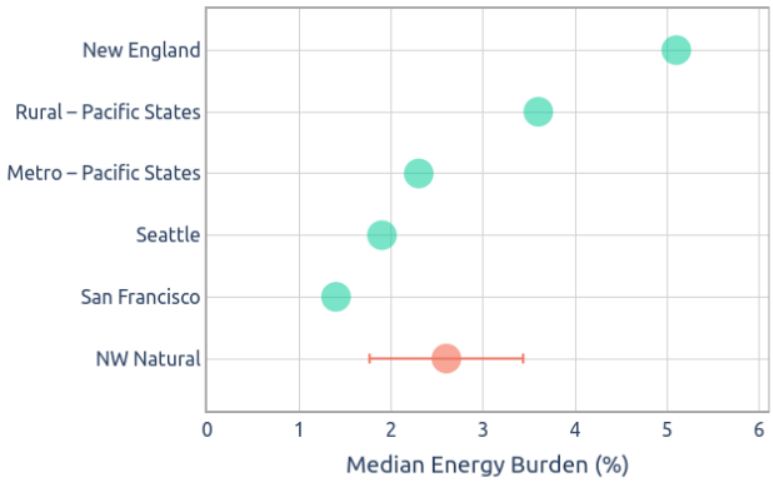

Figure 3. Energy burden benchmarking vs. other regions. Data for other regions is the median across each region, not specific to any utility.

NWN's energy charge in its 2024 residential retail rate is approximately $1.3/therm, which is similar to other gas utilities in the region and slightly lower than the national average of $1.45/therm. Low incomes appear to be the most significant drivers of high energy burden in the area for a minority of customers.

Although averages and medians give a general indication of energy burden across a service territory, the reality is that **energy burden is a customer-level metric** and its distribution is a better indicator of the burden that

customers experience. The distribution of energy burden among NWN customers is shown in Figure 4.

The goal of an effective energy assistance portfolio should be to prioritize the customers who most need the assistance, i.e. the customers exceeding the high burden thresholds.

Approximately 84% of the energy assistance need is borne by single family households. Only 15-20% of the energy assistance need for NWN customers in Oregon is among renters – high-burden single-family homeowners represent a promising opportunity for eliminating gas burden through energy efficiency or weatherization. Other customer segments can be investigated in more detail in the data dashboard.

Number of Occupied Households

~567,000

Low Income Households Under 60% SMI:

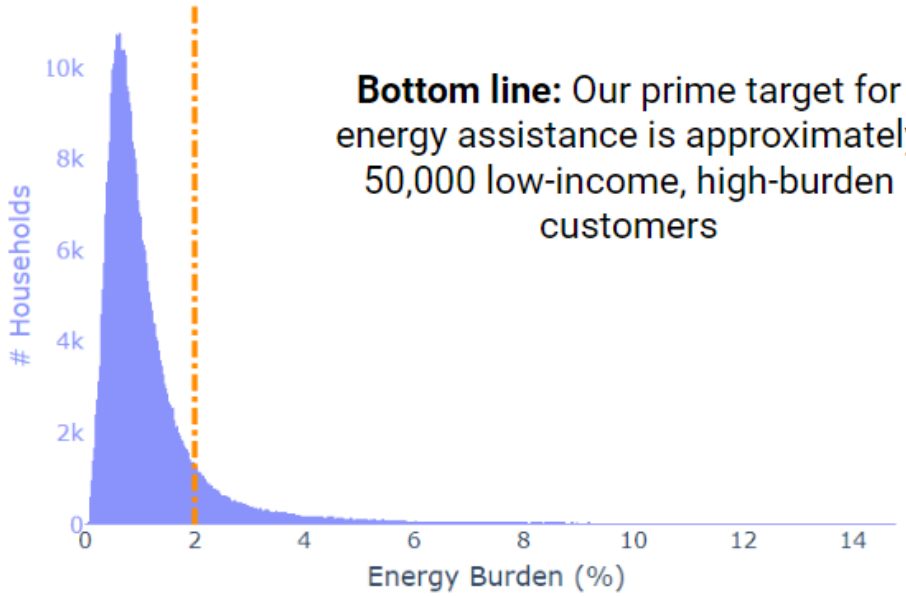
~71k ± 10%

High Burden Households*

~75,000 (all)

~50,000 (LI)

Median Gas Burden
~0.9% (all)
~3% (LI)



Bottom line: Our prime target for energy assistance is approximately 50,000 low-income, high-burden customers

*Energy bills and burden are calculated without factoring in any forms of energy assistance

Figure 4. Distribution of energy burden among NWN customers in Oregon.
Figure shows all homes but dashed line indicating 2% high energy burden threshold applies to marine climate counties (99% of all households).

2.3 ENERGY EFFICIENCY VS DIRECT ASSISTANCE

Figure 5 shows the distribution of energy burden and energy efficiency potential (defined through Energy Use Intensity thresholds) across all low-income residential customers. In a perfect world, the energy assistance portfolio would match these customer segments. For example:

- Energy efficiency and weatherization programs should primarily serve **high burden, high potential** households
- Direct assistance programs should primarily serve **high burden, low potential** households
- Crisis/emergency programs should primarily serve **low burden, low potential** households
- Traditional energy efficiency programs with financing should serve **low burden, high potential** households

Aligning targeted customers with program strengths results are the most cost-effective pathway to energy burden reduction.

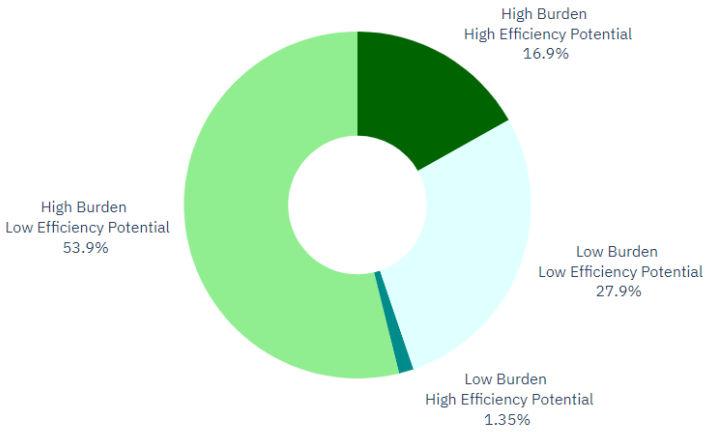


Figure 5. NWN low-income customer segments by energy burden and energy efficiency potential.

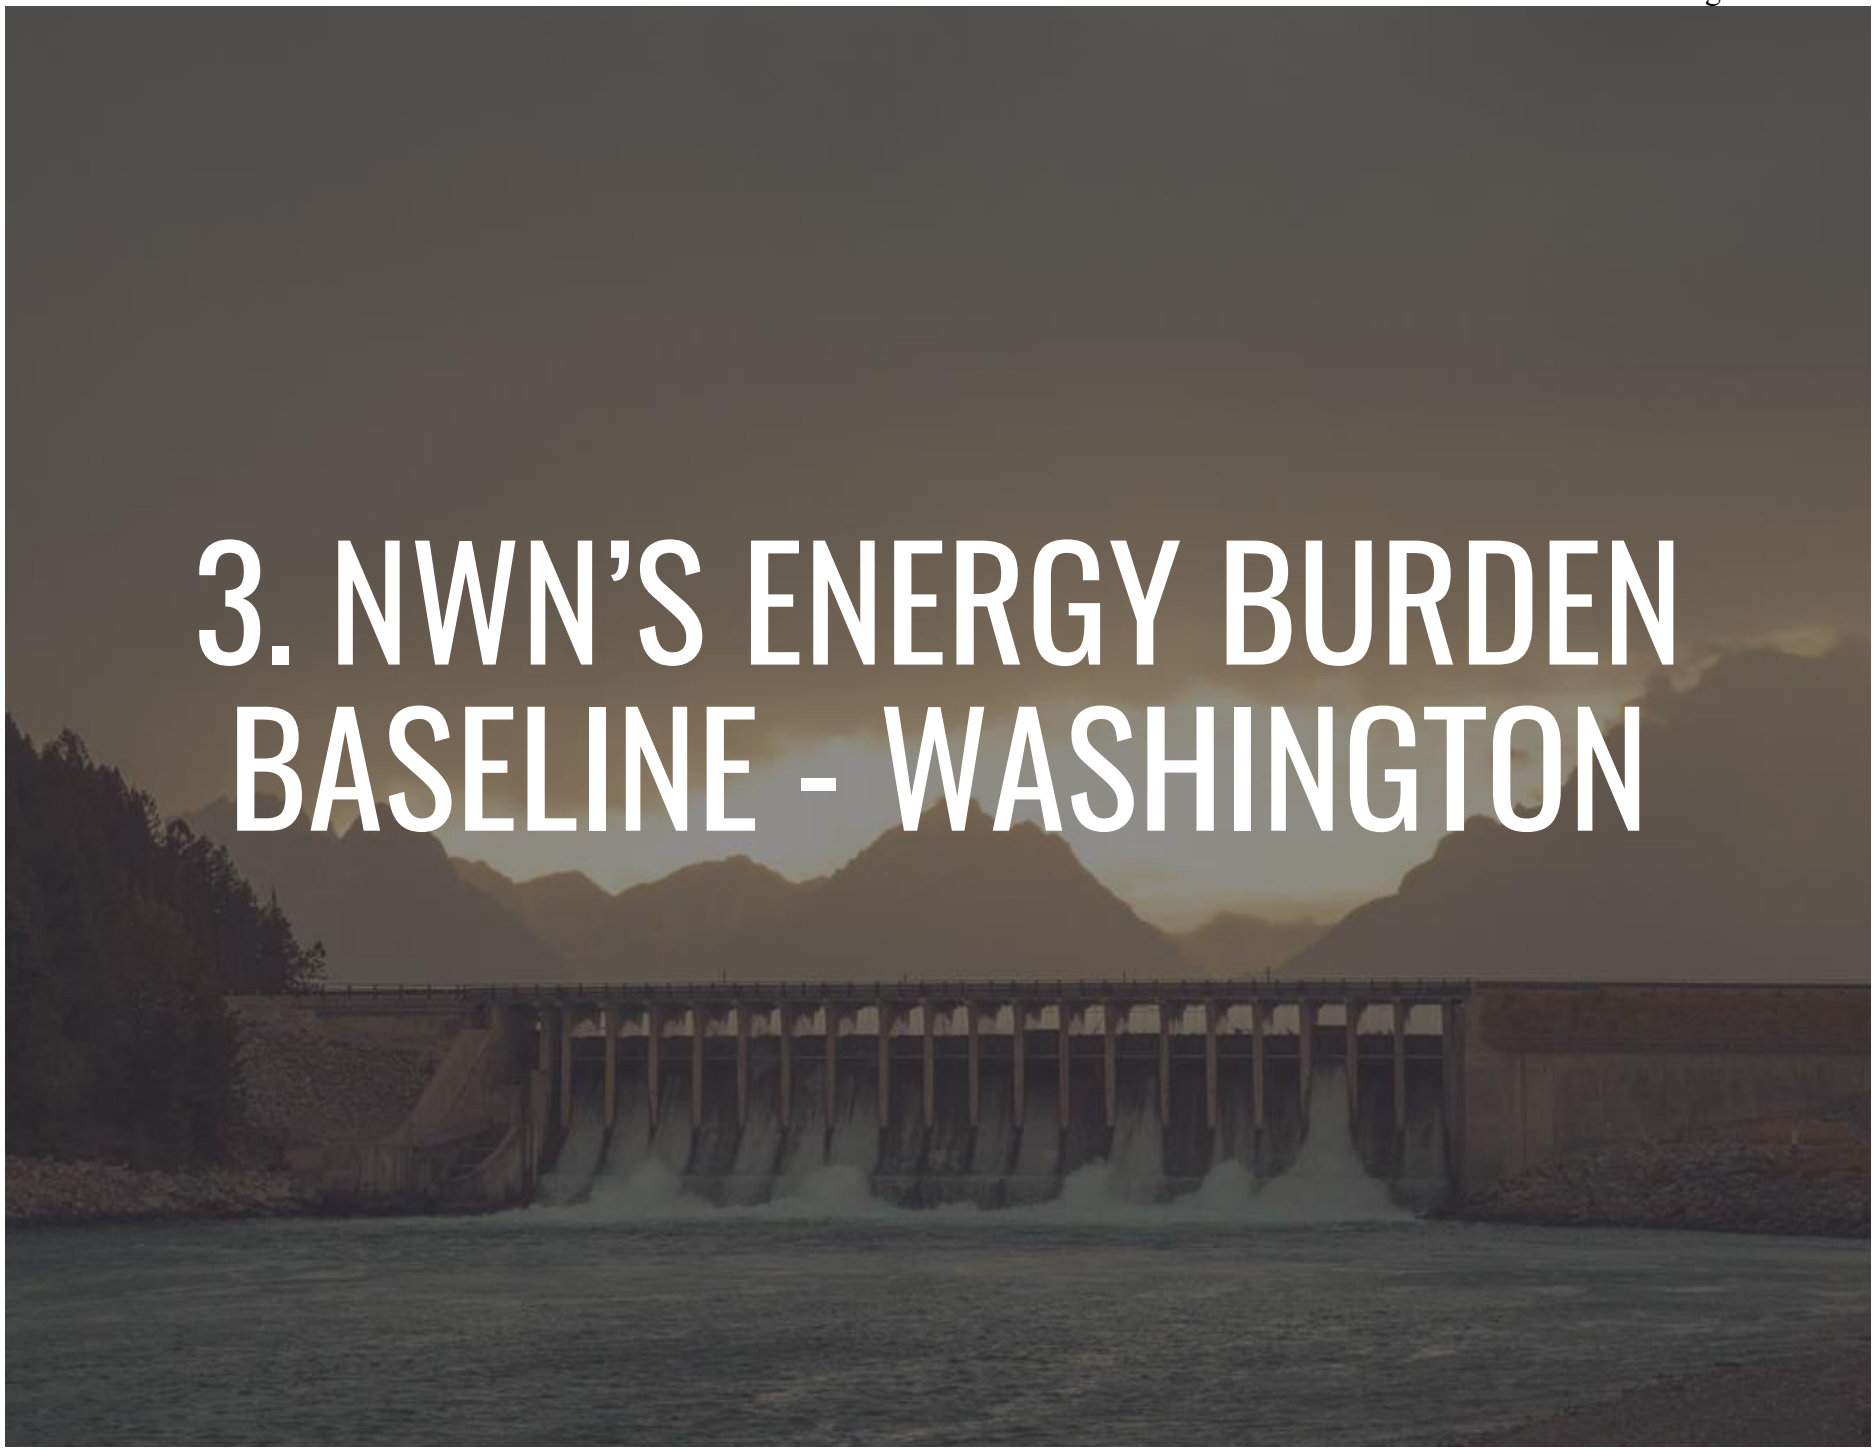
Approximately 28% of NWN's low-income customers are low-burden and low-efficiency potential. These customers' energy bills may not be a huge expense relative to housing, medical and education expenses, and they should not be prioritized in the more intensive programs, such as weatherization.

Almost 24% of high burden customers also have a high efficiency potential indicating that the energy assistance program mix should prioritize immediate relief through bill discounts. While energy efficiency is a more sustained form of energy burden reduction, we should recognize that scaling up low-income weatherization faces a host of barriers. Energy efficiency and direct assistance are not mutually exclusive and there is still a large group of households who would benefit most from energy efficiency to alleviate their high gas burden.



3. NWN'S ENERGY BURDEN BASELINE - WASHINGTON

3.1 NWN RESIDENTIAL SECTOR PROFILE - WA

NWN's service territory in Washington was composed of approximately **78,000 occupied households** in 2023 (exceeding a minimal level of 60 therms/year of energy use and not exceeding 3,600 therms/year).

Ethnicity: According to the U.S. Census Bureau, approximately 73% of residents in Clark County are non-Hispanic white.

Household Income: The median household income for residents in NWN's service area was approximately $123,000 in 2024, significantly higher than the state median. Approximately **23%** of residents would fall under 80% of the Area Median Income (see table on following page for AMI values). An additional 11% of households earn between 80-100% of the area median income. These "borderline" customers would be ineligible for almost all energy assistance programs, but may still bear a relatively high level of energy burden. Designs for programs that are ratepayer-funded should take into account the degree of additional burden that would be imposed on these customers.

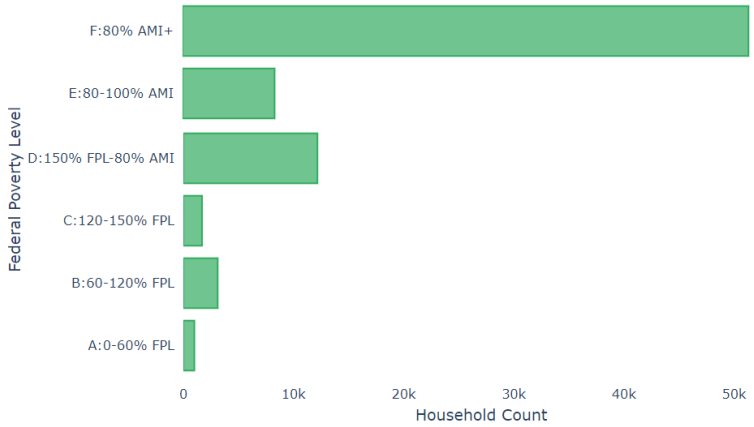


Figure 6. Distribution of households by household income as a percent of federal poverty level and area median income for NWN residential customers

	80% of Annual Area Median Income (AMI) – Clark County, WA	
Household Size	**2023**	**2024**
1	$63,150	$66,100
2	$72,200	$75,550
3	$81,200	$85,000
4	$90,200	$94,400
5	$97,450	$102,000
6	$104,650	$109,550
Each additional member	$7,200	$7,550

Energy Bills: NWN's residential volumetric gas rates in 2024 were about average for the region, and the basic charge is relatively low. But the inclusion of the $0.5/therm CCA charge drives up the cost of gas significantly for customers who haven't been certified as low-income. Annual gas bills average **approximately $1,340/year (2024 projection – not including potential CCA credits which are hard to predict) with an average annual consumption of 740 therms**. Figure 7 shows the distribution of annual gas bills.

Home Vintage: Of the homes with a known age, approximately 86% were built after 1980, 11% were built between 1940 and 1980, with the remainder built prior to 1940. Older homes have more opportunities for weatherization, while newer homes could benefit more from lighting, controls and efficient appliances.

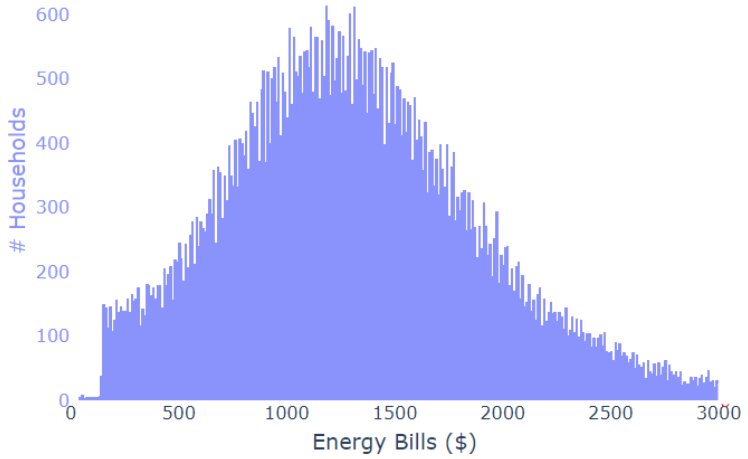

Figure 7. 2024 Household gas bill distribution for NWN residential customers in Oregon

3.2 ENERGY BURDEN

NWN customers in Washington have an **average and median gas energy burden of 1.5% and 1.0%**, respectively. Figure 8 compares NWN's median total energy burden (including an estimate of electricity burden) to values published in other jurisdictions. The median burden is between other rural and metropolitan regions in the Pacific Northwest.

The average household will pay $1,340/year in gas bills in 2024. Of 78,000 identified households, **13,000 were deemed to have a high energy burden**, of which an estimated 10,000 would fall under 80% Area Median income - meaning that annual gas bills exceeded 2/3% of their income, depending on their climate zone. Low-income high-burden customers paid an average of $1,380 in annual gas bills, despite most being exempt from the CCA charges; indicating a higher likelihood of living in less efficient homes. The **total energy assistance need for NWN customers in Washington is approximately $7.3M across all incomes and $5.9M in households that earn under 80% AMI**—this is the total reduction that would bring all customer gas bills below the high burden threshold.

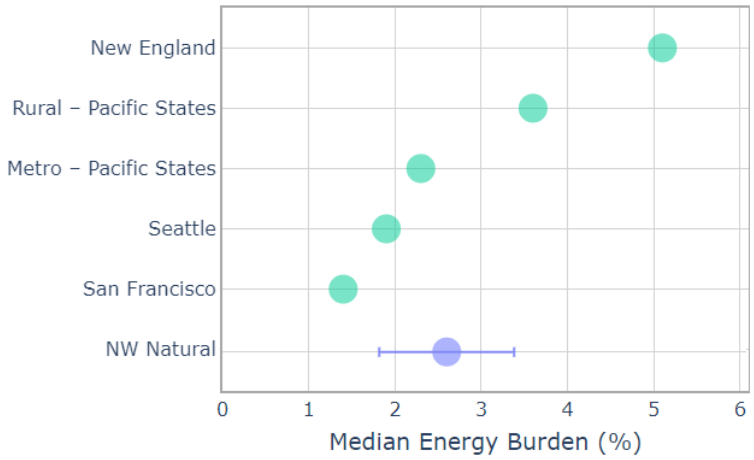

Figure 8. Energy burden benchmarking vs. other regions. Data for other regions is the median across each region, not specific to any utility.

NWN's energy charge in its 2024 residential retail rate is approximately $1.7/therm (inclusing Washington CCA charges), which is higher than other gas utilities in the region and the national average of $1.45/therm. Higher gas use coupled with the CCA charges appear to be a big driver of high energy burden in the region.

Although averages and medians give a general indication of energy burden across a service territory, the reality is

that **energy burden is a customer-level metric** and its distribution is a better indicator of the burden that customers experience. The distribution of energy burden among NWN customers is shown in Figure 9.

The goal of an effective energy assistance portfolio should be to prioritize the customers who most need the assistance, i.e. the customers exceeding the high burden thresholds.

Approximately 88% of the energy assistance need is borne by single family households. Only 9-10% of the energy assistance need for NWN customers in Washington is among renters – high-burden single-family homeowners represent a promising opportunity for eliminating gas burden through energy efficiency or weatherization. Other customer segments can be investigated in more detail in the data dashboard.

Number of Occupied Households

~78,000

Low Income Households Under 80% AMI:

~18k ± 10%

High Burden Households*

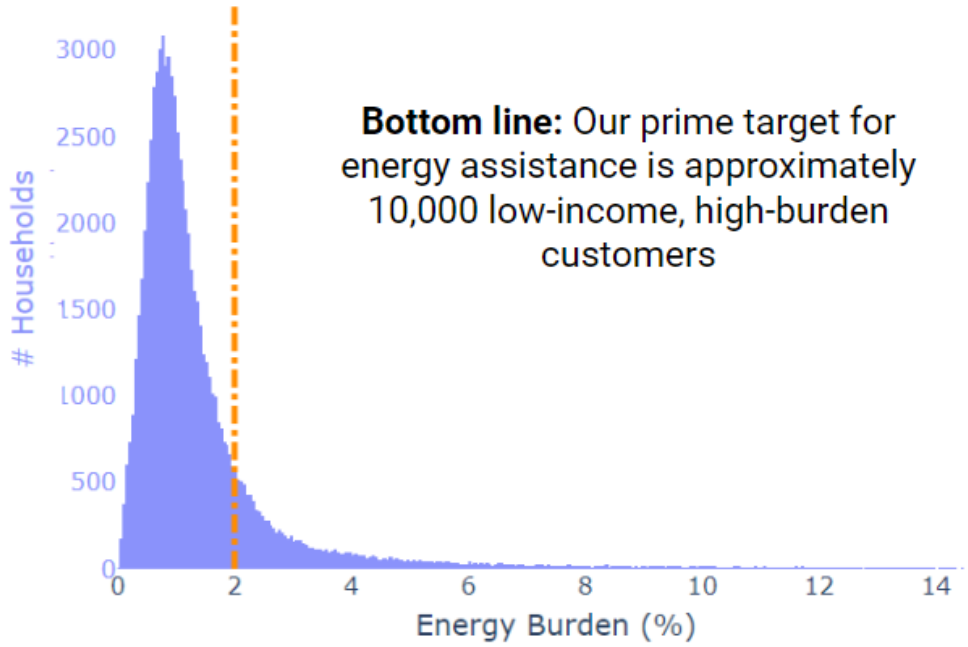
~13,000 (all)

~10,000 (LI)

Median Gas Burden

~1% (all)

~2.2% (LI)



Bottom line: Our prime target for energy assistance is approximately 10,000 low-income, high-burden customers

*Energy bills and burden are calculated without factoring in any forms of energy assistance

Figure 9. Distribution of energy burden among NWN customers in Washington.
Figure shows all homes but dashed line indicating 2% high energy burden threshold applies to marine climate counties (99% of all households).

3.3 ENERGY EFFICIENCY VS DIRECT ASSISTANCE

Figure 10 shows the distribution of energy burden and energy efficiency potential (defined through Energy Use Intensity thresholds) across all low-income residential customers. In a perfect world, the energy assistance portfolio would match these customer segments. For example:

- Energy efficiency and weatherization programs should primarily serve **high burden, high potential** households
- Direct assistance programs should primarily serve **high burden, low potential** households
- Crisis/emergency programs should primarily serve **low burden, low potential** households
- Traditional energy efficiency programs with financing should serve **low burden, high potential** households

Aligning targeted customers with program strengths results are the most cost-effective pathway to energy burden reduction.

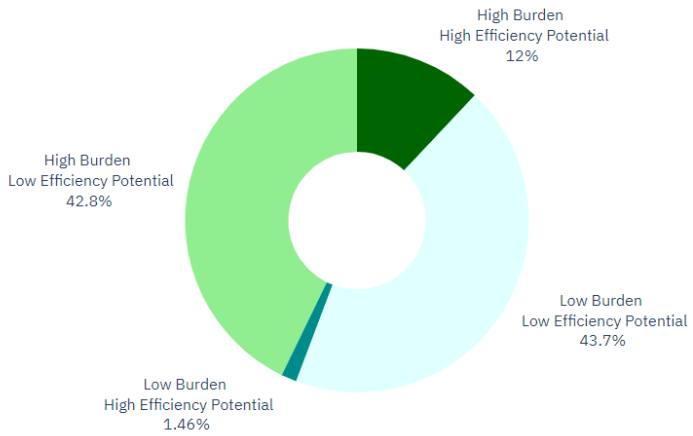


Figure 10. NWN WA low-income customer segments by energy burden and energy efficiency potential.

Approximately 44% of NWN's low-income customers in Washington are low-burden and low-efficiency potential. These customers' energy bills may not be a huge expense relative to housing, medical and education expenses, and they should not be prioritized in the more intensive programs, such as weatherization.

Almost 22% of high burden customers also have a high efficiency potential indicating that the energy assistance program mix should prioritize immediate relief through bill discounts. While energy efficiency is a more sustained form of energy burden reduction, we should

recognize that scaling up low-income weatherization faces a host of barriers. Energy efficiency and direct assistance are not mutually exclusive and there is still a large group of households who would benefit most from energy efficiency to alleviate their high gas burden.

4. KEY CUSTOMER SEGMENTS

4.1 OVERVIEW

This section presents statistics and profiles related to some key customer segments in NWN's service area. These customer segments were selected for a combination of reasons:

1. Flagged in this assessment as having high overall burden or high prevalence of energy burden

2. Identified as having low access to existing programs

3. Identified as vulnerable through the Department of Energy's environmental justice screen

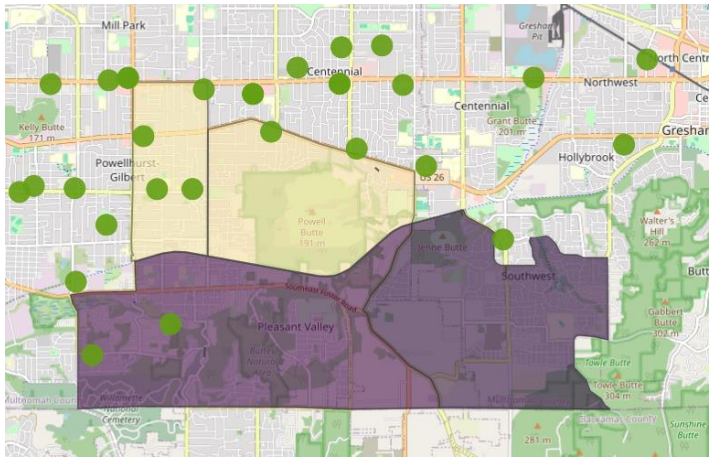
This analysis is primarily geographic, focusing on specific neighborhoods. The maps in the following sections display the level of energy assistance need in these areas as well as locations of social services for potential outreach (green dots).

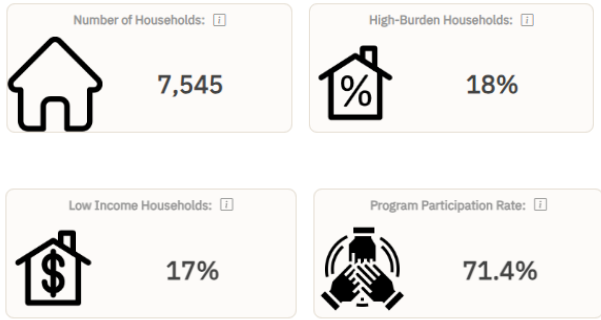
These customer segments represent only a portion of the high energy burden among NWN's customers, but they are intended to serve as an example of the targeting analysis that NWN can perform for their programs or outreach initiatives in the future.

4.2 PLEASANT VALLEY

Census tracts: **41051008901, 41051009000, 41051009102, 41051009903**

Total Assistance Need: **$745k (1.6% of total need)**
Total Assistance Funding: **$414k (2.5% of total funding)**
People of Color: 38%
Linguistic Isolation: 8%





PROFILE: The Pleasant Valley neighborhood in Eastern Multnomah county is a very diverse community with over 38% people of color and over 8% of the population living in linguistic isolation (mix of Spanish, Asian and East European). Members of this community tend to be single family homeowners. On the other hand, it appears to be well served by existing assistance programs.

RECOMMENDATIONS: Households in this area already have very high participation rates, yet the energy assistance funding only covers 56% of the need. It is evident that higher benefits or connecting participants to additional programs may be needed to fully alleviate gas burden.

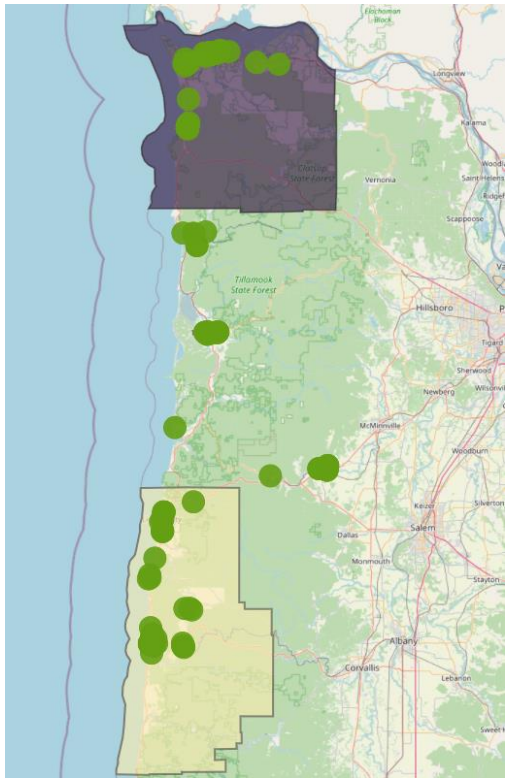
4.3 COASTAL AREAS

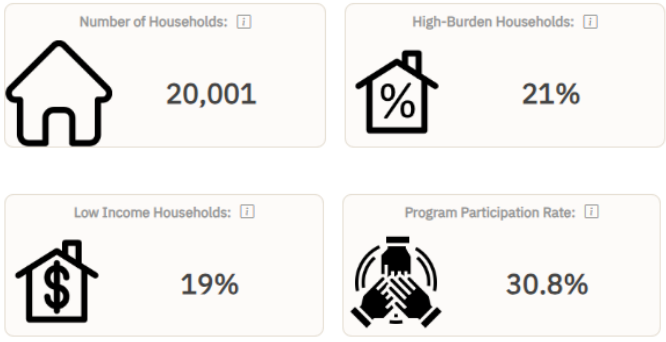
Total Assistance Need: **$2.1M (4.6% of total need)**

Total Assistance Funding: **$0.4M (2.4% of total funding)**

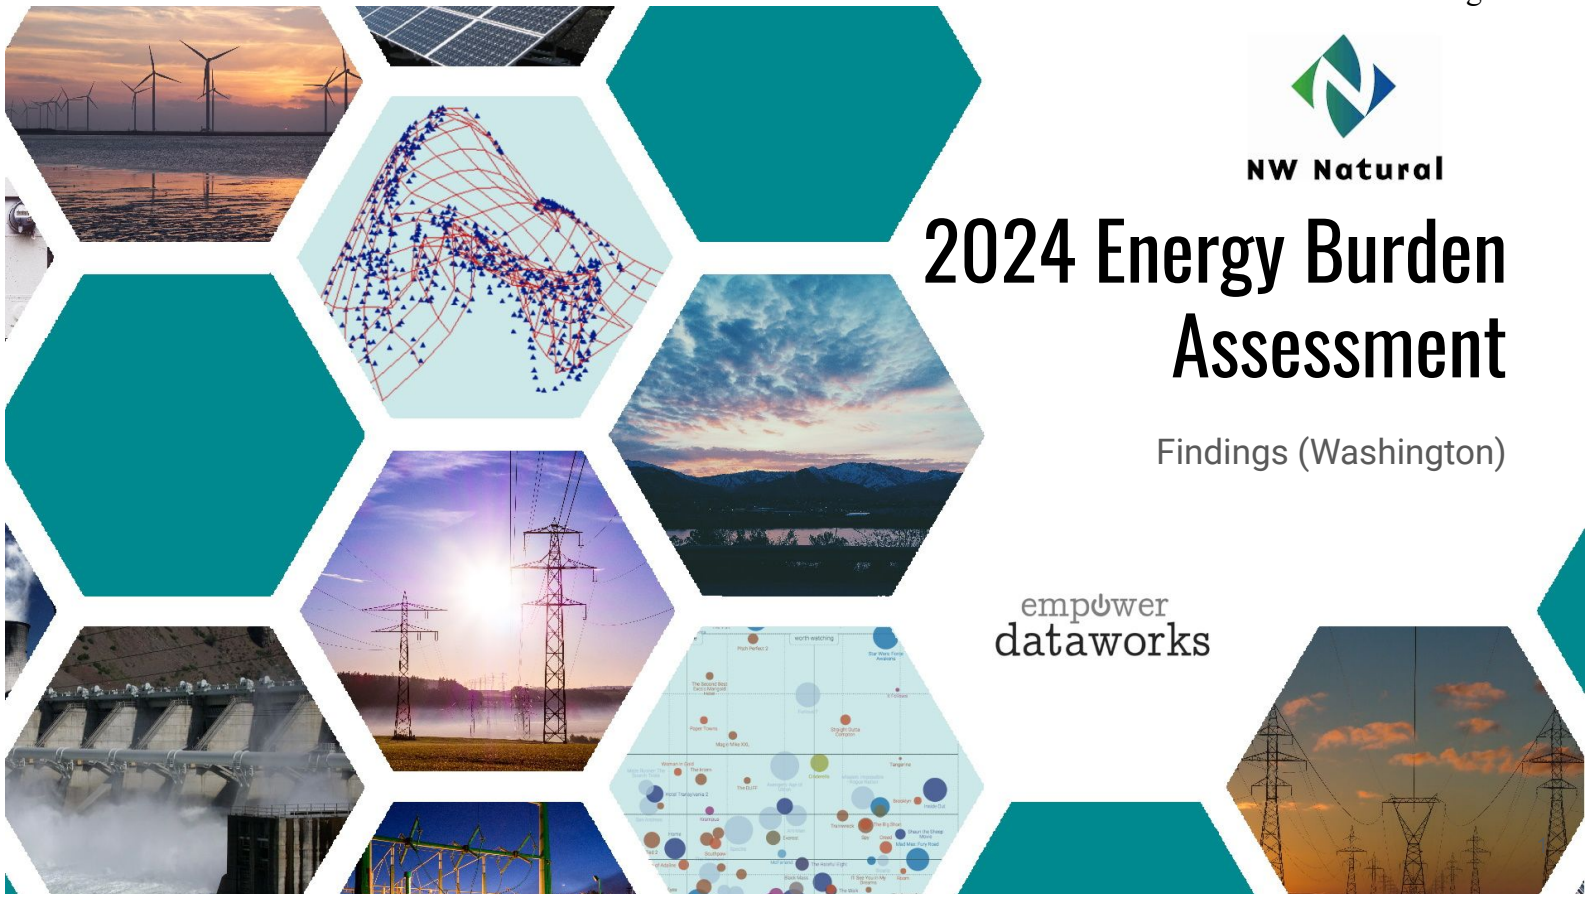
PROFILE: Clatsop and Lincoln counties are characterized by smaller towns and rural areas. Households in these areas experience moderate energy burden – 21% of households are considered high burden. The region was flagged for having relatively low participation rates. Most of these residents are single family homeowners.

RECOMMENDATIONS: Consult with local community-based organizations on the best approach to reaching potentially eligible households. Locally targeted marketing campaigns might be effective at reaching customers as well as collaborating with schools and local.





empower dataworks
www.empowerdataworks.com



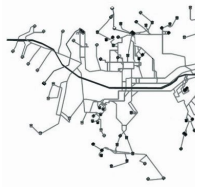
NW Natural

2024 Energy Burden Assessment

Findings (Washington)

empower dataworks

What is an Energy Burden Assessment?



Data analysis (not a survey) that uses utility and third-party customer data.

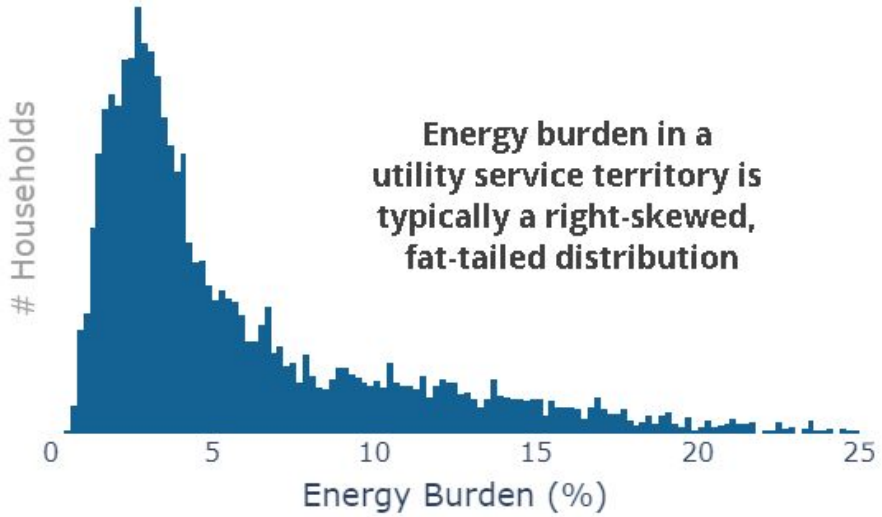
Primary purpose is to estimate the energy assistance need based on customer-level geographic, demographic and building data.

Comparing the need to actual program performance gives us an **actionable** path to improving our energy assistance programs

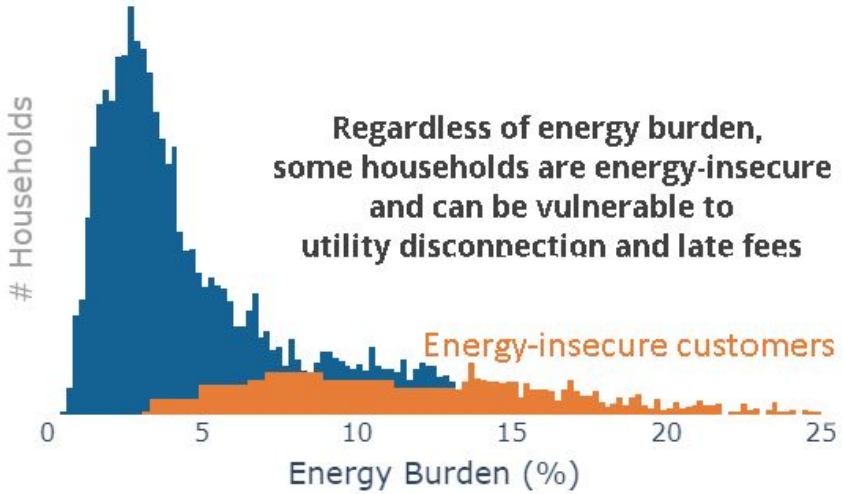
Energy Burden

The primary metric of success is reduction in energy insecurity

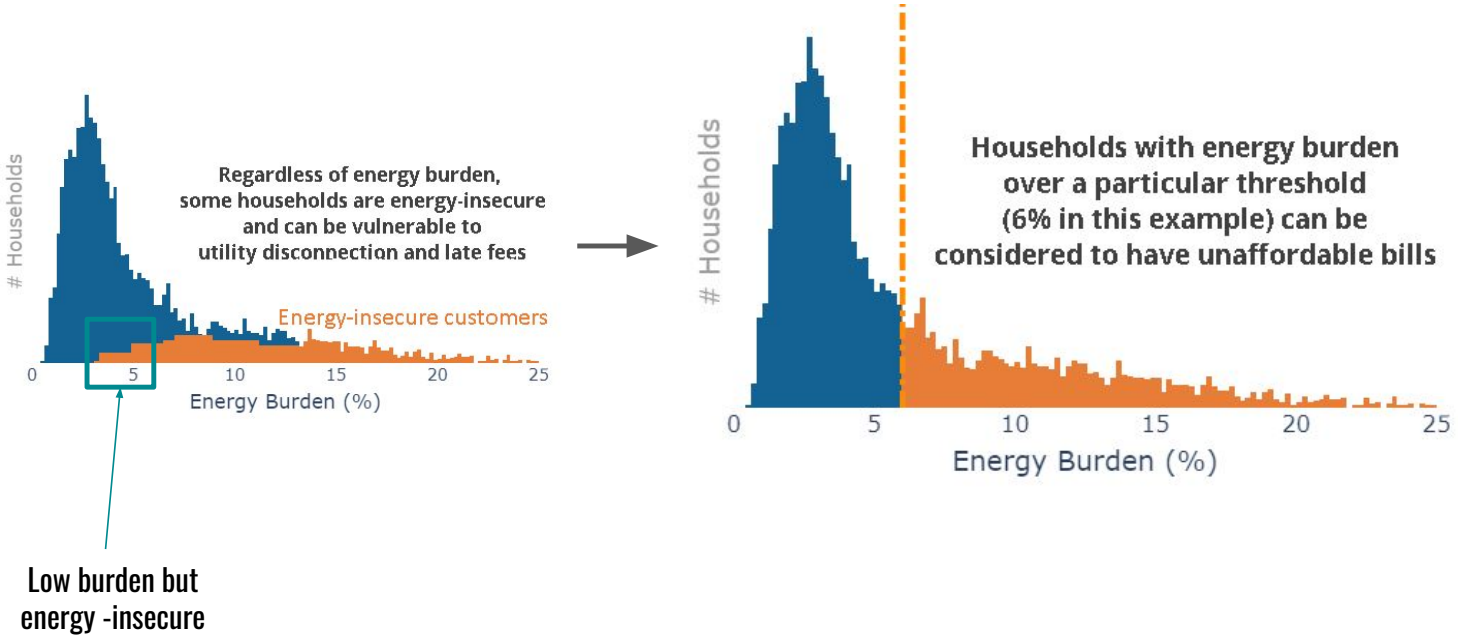
Energy Burden is a Distribution



Energy Insecurity is Harder to Measure



Energy Burden is a Proxy for Energy Insecurity



Definitions

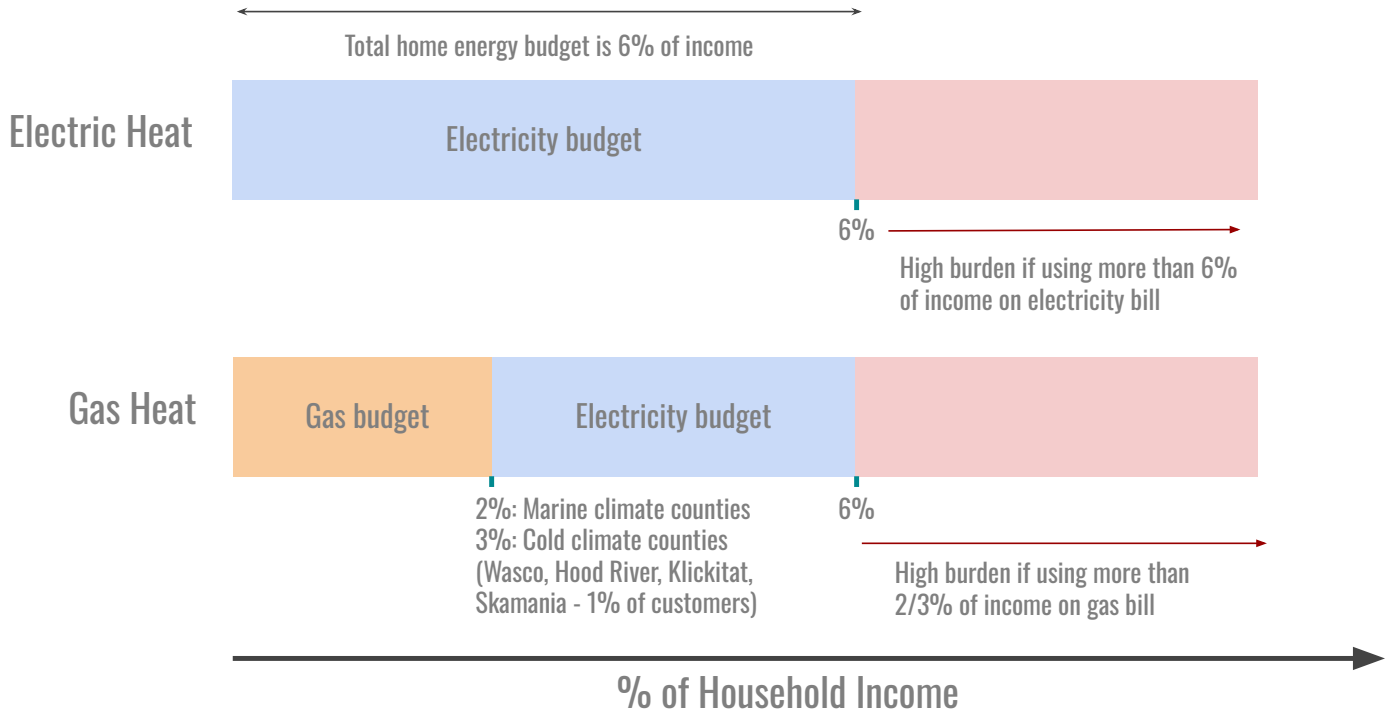
Low-income (Washington):

Households earning under 80% of the area median income (AMI) - Clark county for simplicity

Household Unit Size	Annual Gross Income
1	$66,100
2	$75,550
3	$85,000
4	$94,400
5	$102,000
6	$109,550

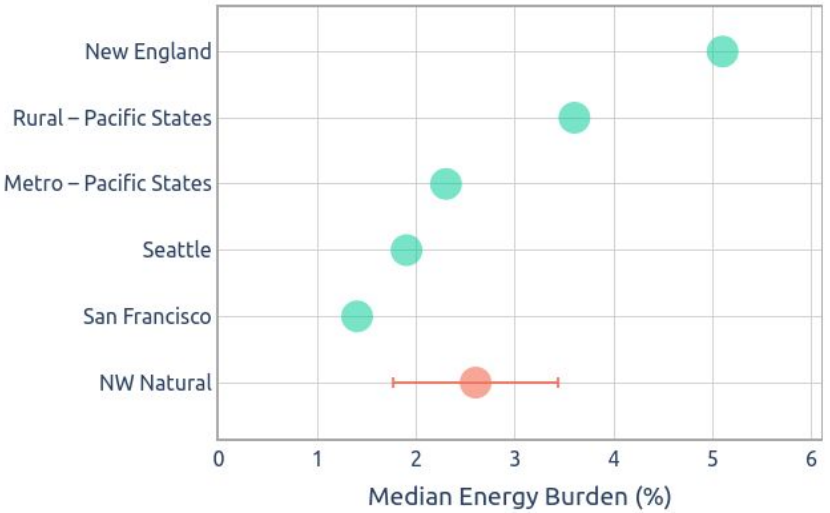
**Most data is reported for the 2023 calendar year. Bills and energy burden are projected for 2024 using 2024 rates and 2023 energy usage. 2024 household incomes are estimated to be 7% over 2023 incomes on average (equal to state median income increase)*

High burden thresholds for multiple fuels



Insights: **Energy Burden**

- ➔ Median total energy burden (~2.6%) is comparable to other metropolitan areas in the Pacific Northwest.
- ➔ Rates are average for the region and NW Natural customers have relatively higher incomes than the general population and experience mostly mild winters.



Insights: **Energy Burden (Washington)**

Number of Occupied Households

~78,000

Low Income Households Under 80% AMI:

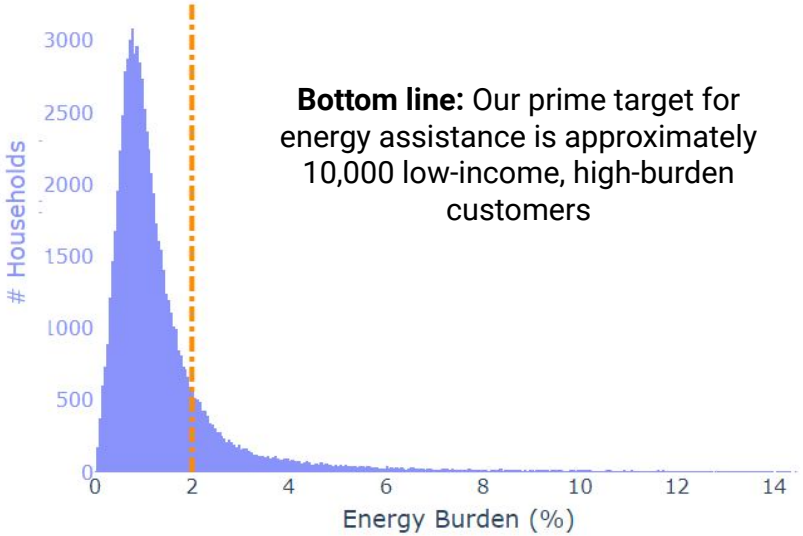
~18k ± 10%

High Burden Households*

~13,000 (all)

~10,000 (LI)

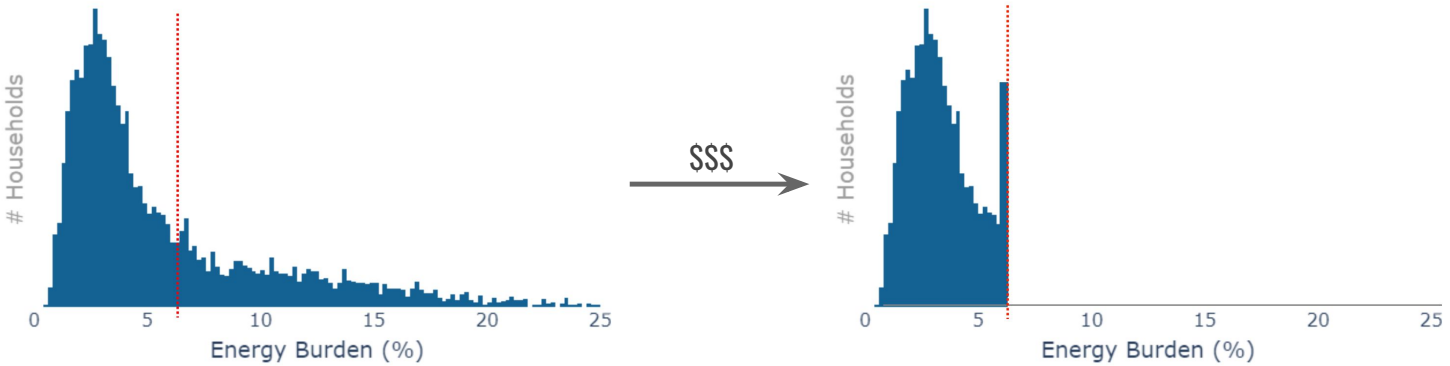
Median Gas Burden
~1% (all)
~2.2% (LI)



Bottom line: Our prime target for energy assistance is approximately 10,000 low-income, high-burden customers

*Energy bills and burden are calculated without factoring in any forms of energy assistance

Energy Assistance Need



Insights: **High-level Assistance Gap**

Low-Income, High Burden Households

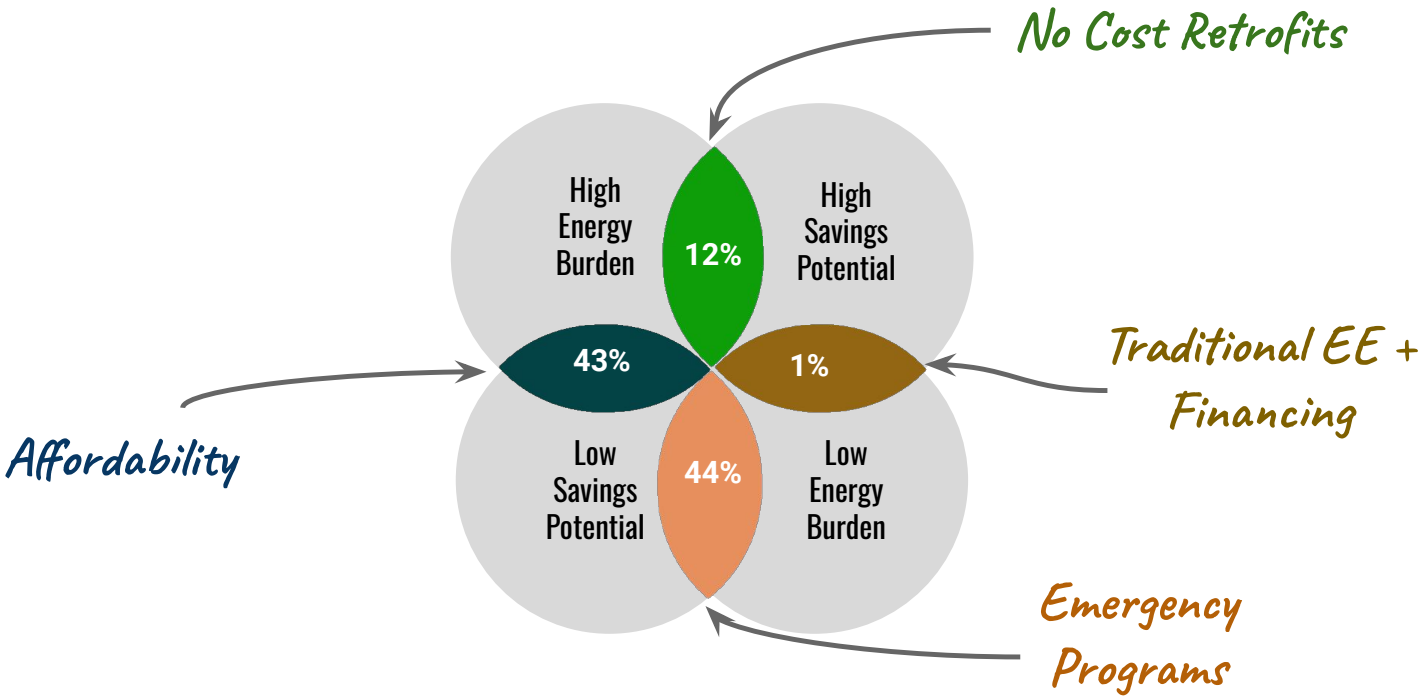
~10,000

Income-eligible only

2024 Projection not including additional program participation:
Bill Discount Program (BDP): $1.8M

➔ At program maturity (year 5+), best practice is to target at least 60-70% of the need available as program funding - barring rate increases, BDP should hit this target in 2025-26 as program enrollment grows.

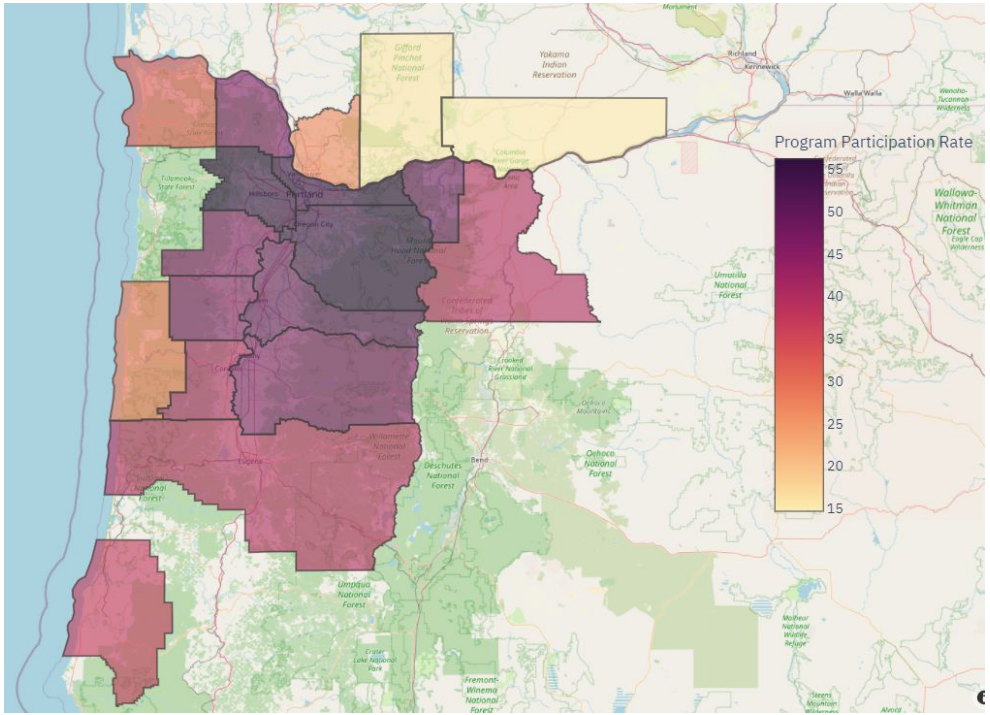
Program Potential (Washington)



Bill Discount Program

Program Participation Rate (Overall)

Recommendation: Washington program is just starting up - focus on general outreach for now, then pivot outreach efforts to Klickitat and Skamania counties in 2025.



Program Saturation Rates (Washington)

Income tier	Estimated number of households	% High-burden	Participation rate
0-60% FPL	1,000	93%	57%
60-120% FPL	3,100	85%	41%
120-150% FPL	1,700	70%	36%
150% FPL- 80%AMI	12,000	42%	16%

Maintain focused outreach efforts on these groups. Target 80% participation by 2028.

Discount Tier Analysis (Washington)

Income tier	Discount Level	Average assistance need as a percent of bill (2024)
0-60% FPL	80%	80%
60-120% FPL	40%	56%
120-150% FPL	20%	40%
150% FPL-80% AMI	15%	18%

Base WA analysis does not include CCA credit and does not include CCA charge for LI households.

Whatever happens to OLGA will likely apply to GREAT as well.

Program Interaction

Discount tier analyses quantify the bill reductions needed to reduce gross customer energy bills to a reasonable percentage of their income. They do not take into account other sources of energy assistance available to low-income households. This is appropriate when a utility uses the discount program as the only type of energy assistance. NW Natural also funds the GREAT program which provide energy assistance grants to eligible customers who apply through a community action agency.

Recommendation:

- *Option 1:* Redesign GREAT.
- *Option 2:* Sunset GREAT and shift funding to BDP.

Outreach Challenges

Challenge:
NW Natural's service territory has a myriad of cultures and ethnicities, a variety of economic backgrounds, urban and rural households and more. NW Natural cannot feasibly become an expert in outreach to every community within its service area.

Recommendation:

Program Navigator Fund: Incentivize local community-based organizations (CBOs) to refer and support customers in applying for the program. These CBOs would serve as the "Program Navigators" would be CBOs that register with NW Natural and would be compensated per successful customer application. Program Navigators would be trained to refer customers to other programs (e.g. LIHEAP, Energy Trust, etc.) in addition to BDP and assist with the application and post-enrolment verification process.

> Pilot estimates: $200k fund, $75 per successful application. Program/pilot may be coordinated jointly with PGE/Pacific Power.

Arrearages and BDP

- NW Natural generally has a low service disconnection rate when considering unique premises (many households may get disconnected multiple times a year)
- 32% of disconnected households are reconnected on the same day and 26% reconnected within one week.
- Very few disconnected households (~100) in past year were likely eligible for energy assistance but didn't participate. **Communication about BDP to customers at risk of disconnection is working well.**

Arrearage Relief

Challenge:
About 10-15% of BDP participants enroll in the program with pre-existing arrears.

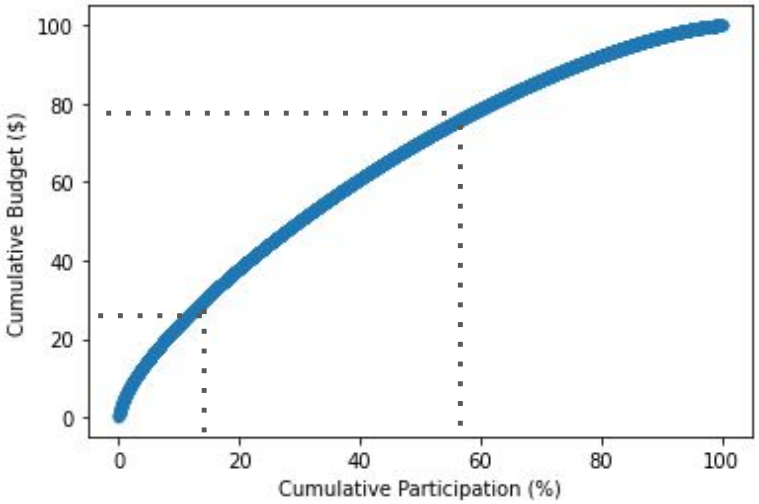
Recommendations:
While some BDP participants may need help with arrears, we are not recommending an Arrearage Management Program (AMP). In our experience, AMPs (which typically require consistent payments from customers in exchange for arrearage matching from a utility) are very onerous to implement, hard to explain to customers and typically have low success rates for customers completing the term of the program (customers do not receive the full arrearage matching because they fall behind on their bills). Most NW Natural customers have relatively small arrears. Instead, we are recommending that NW Natural provide arrearage relief using an immediate, much simpler, and no strings attached approach.

Arrearage relief for program participants: Assess the feasibility and benefit vs. cost of a capped budget arrearage relief program. For simplicity, the program should be made available to BDP participants as a retroactive credit. In other words, the customer's bill discount percent gets applied retroactively for arrears up to a limit (e.g. X% discount on first $1,000 of arrears).

Pilot estimate: $500k arrearage relief fund is likely sufficient to serve the 3,000-4,000 BDP customers who enroll with pre-existing arrears.

Energy Efficiency

Bill Discount Program utilization



Within each income/discount tier:

Top 10% of participants by energy use utilize 21-24% of budget. Their average energy use is 80% higher than the overall average energy use.

Top 50% of participants by energy use utilize 69-72% of budget. Their average energy use is 30% more than the overall average energy use.

Top 10 energy users will receive $3,000+ in 2025

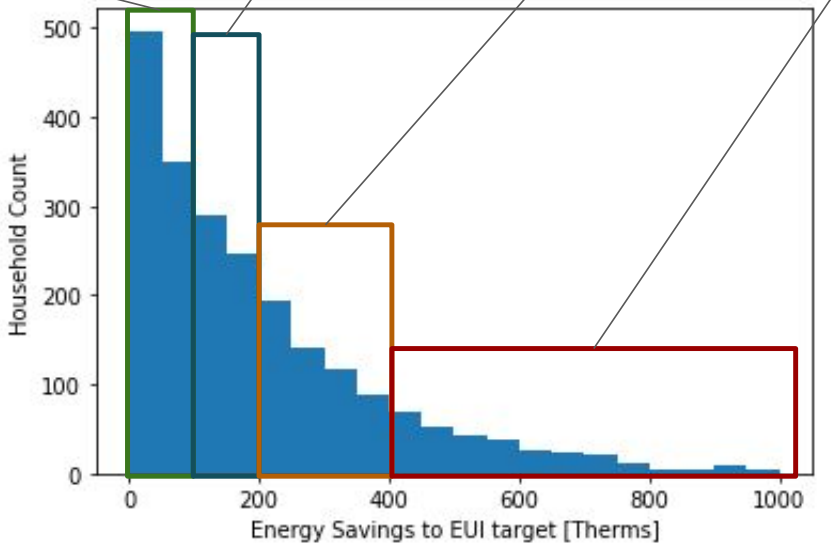
Energy Efficiency Potential (Washington) (2,000 low-income households)

37% Smart thermostats, pipe insulation, furnace tuneups

24% HE water heater/furnace

24% Weatherization

15% Custom / Energy Audits



EUI target = 0.6 Therms/sq.ft

Energy Efficiency Potential

Challenge:
Overall, energy efficiency potential appears to be concentrated in a small segment of low-income customers. High energy users overutilize program funds while the root cause of their high energy burden remains unaddressed. There are 12,000 low-income customers (7,400 BDP participants) who would potentially be good candidates for energy efficiency measures, but existing low-income EE programs serve relatively few households.

Recommendations:

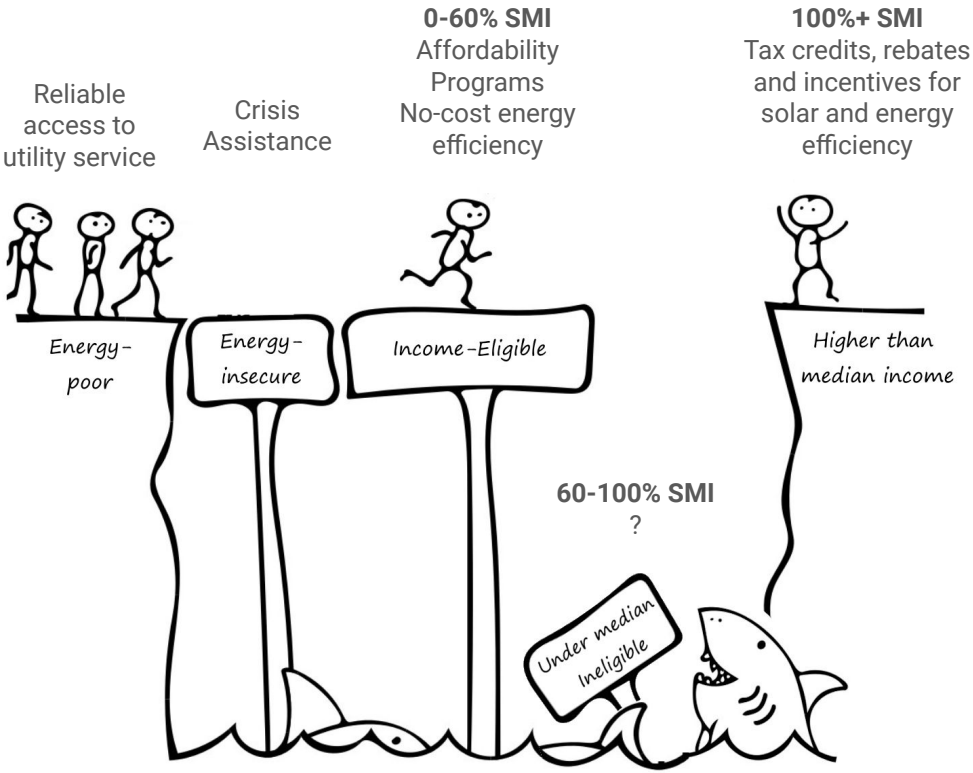
First step towards integrating energy efficiency with BDP is to identify and understand the high use participants.

Energy audit program: Establish a energy audit pilot program (through RFP) that focuses on the top 2,000 or so users in BDP ($1.5M approx. budget). Program should include walkthrough energy audit, ETO and EE credit referrals. List of high priority homes should be provided to program implementer. This program can be designed to be cost-effective through realized savings in BDP discounts.

Unbundled energy efficiency: 35-40% of households could have their energy use reduced to a reasonable level through low-cost measures, without requiring extensive weatherization. Evaluate the feasibility of funding or offering low-cost measures (smart thermostats, pipe insulation, furnace tuneups) and energy education at no-cost to low-income households. This would be most effectively accomplished in collaboration with the Energy Trust of Oregon

The Energy Assistance Hole

The Energy Assistance Hole



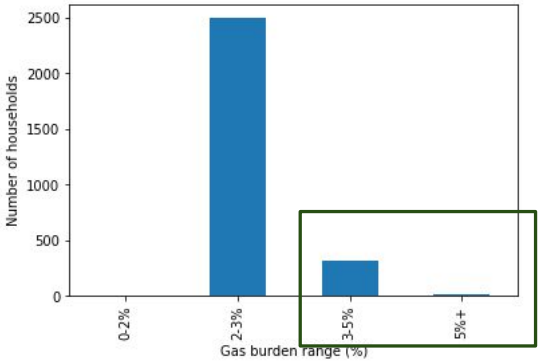
The Energy Assistance Hole (Washington)

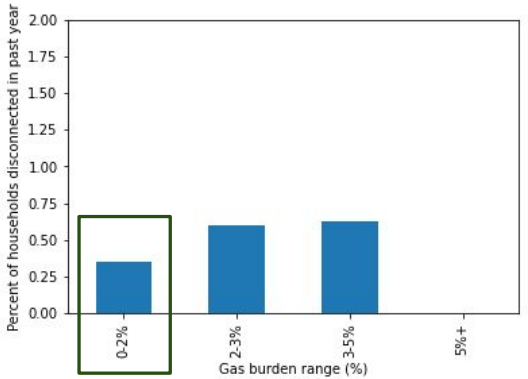
~300 non-low-income households
with a high energy burden >3%

~2,400 borderline (2-3% burden)

Moderate income, high gas use
(1,400 Therms/yr on average)

~200 non-low-income households
at risk of disconnection despite
having a low energy burden





Addressing high-burden, program-ineligible households

Challenge:
There are households that are not eligible for existing programs but may need help improving their bill affordability.

This includes households that:

- Are under the state median income, have a high energy burden, but are ineligible for assistance
- Constrain their energy use due to lack of affordability and lack of program access
- Are **A**sset **L**imited, **I**ncome **C**onstrained, **E**mployed
- Earn above the program income thresholds but under the Self Sufficiency Standard Income

Recommendations:

Customers in this category are high gas users, so discounts and grants do not solve the root causes of their high burden.

Offer no-cost energy weatherization: Expand eligibility for LIEE

Coordination with energy efficiency providers: Work with ETO and CAP agencies to target EE funds at low-income, high burden households. Consider targeted co-marketing campaigns based on data from this assessment.

Other Recommendations

Post-enrolment verification

Challenge:
BDP was designed with self-declared income and the intent was to establish a post-enrolment verification process for 3% of participants in a random draw.

Recommendations:

Targeted verifications: Consider a more targeted verification protocol. Consult with BDP advisory group to determine criteria for initiating a verification (e.g. high property value, own multiple properties, high estimated income).

Potentially use remunerated program navigators to assist customers with responding to the verification request.

Rough estimates of PEV counts

Risk-based: 2,500 (7%) High value homes - 1,100 (3%) of which are in high discount tiers

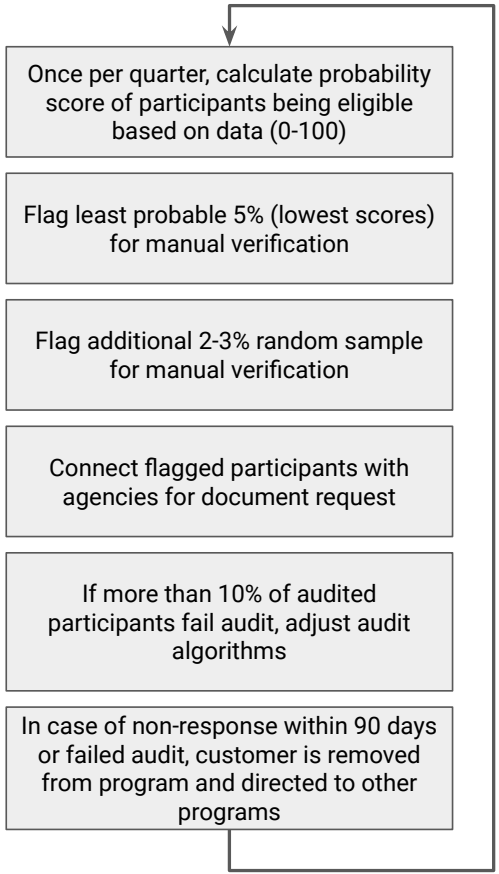
Benefit value-based: 1,700 (5%) receiving over $1,000 from BDP

Audit Protocol for Self-Verification and Auto-Enrollment

The audit process and scoring algorithms are developed and operated within the utility - customer audit lists are shared with agencies.

Data requirements:

- Home values
- Housing type
- Renter/homeowner
- Disconnect/past due notices
- Home location and average neighborhood energy burden
- Participation in other means-tested benefits (optional)
- Estimated customer income range (optional)



Other Issues

Reduce need for reapplication: Allow fixed income customers to reapply every 4-5 years instead of every two.

Communication timing: Biggest marketing pushes should be in September/October **before** high bill season. Include communication about projected winter bills including rate increases and energy efficiency tips to encourage customers to apply early.

Rate design: Evaluate raising the fixed charge with a corresponding decrease in the therm charge. The fixed charge also does not reflect NW Natural's true fixed costs (average of $34 for the residential class). This encourages conservation and solar but low-income customers cannot afford these improvements. Higher volumetric rates are a major trigger for falling behind on bills when a customer receives an unplanned bill during the cold season.

Enrolment target: Use energy assistance need in addition to enrolment as a program metric. Participation rates alone do not reflect whether the program is alleviating energy burden. Set program targets in relation to energy assistance need (similar to Washington state) as opposed to enrolment % targets - this incentivizes targeting the highest need customers vs. just a higher number of participants.

Master-metered buildings

Main Takeaways - Energy Burden Assessment

- NW Natural's customers are relatively higher income and live in a moderate climate. This is reflected in a generally moderate gas burden. Approximately **9% of NW Natural's customers suffer from a high gas burden** (exceeding 2/3% depending on the climate zone)
- The Bill Discount Program (BDP) has been ramping up successfully and along with other assistance programs, is expected to meet **49% of the energy assistance need** for NW Natural's customers in 2024 and 47% of the need in 2025 (including rate increases and proposed discount tiers).
- Recommendations in this assessment are auxiliary components that can be added to NW Natural's energy assistance portfolio to better improve bill affordability:
    - **BDP:** How to deal with the interaction between BDP and OLGA/GREAT to eliminate participants' high energy burden
    - **Arrearages:** How to best serve customers with pre-existing arrears
    - **Energy Efficiency:** How can we leverage energy efficiency for sustained energy burden reduction
    - **Energy assistance hole:** How to best serve customers who have unaffordable bills but are ineligible for assistance programs
    - **Other:** How do we design more equitable rates and target assistance at customers who need it the most

Outreach & Communications Toolkit

Washington | Bill Discount Program

NW Natural®

Enrollments in Washington **reached nearly 8,000** in the first year of the program—that's 8,000 income-eligible households who are now better able to afford their monthly gas bills!

Outreach continues and we are grateful for your support in promoting this important resource.

About | Washington Bill Discount Outreach & Communications Toolkit

NW Natural

NW Natural's bill discount program can save income-eligible customers 15%-80%.

This toolkit includes printable resources, digital materials and customizable content to streamline outreach efforts and integration into existing channels of communication.

Our partners are sharing bill discount information through:

- Check-in calls with homebound seniors
- Newsletters & social media
- Meal deliveries & home weatherization kits
- Tabling at farmer's markets, open houses, community meetings
- Text messages

To learn more or receive hard copies of program materials, contact: CommAffairs@nwnatural.com.

Talking Points

Lower your bill

Discounts up to 80% off monthly bills are available.

Enrollment is available to qualifying residential NW Natural customers.

More, not less

It's extra money on top of other energy assistance you may get.

The discount is good for two years. Then you will be contacted to sign up again. NW Natural will remind you before it ends.

Sign up easily

Proof of income is not required to apply. Self-reported figures on household size and average annual income will verify eligibility.

Ways to apply:

- **Online** to fill out a short form
- **Call** and get help over the phone **503-226-4211** or **800-422-4012**
- **Mail** in a completed application

Who is eligible?

Enrollment is available to qualifying residential NW Natural customers.

Discounts are available if your household income is at or below 200% of the federal poverty line (FPL) or 80% of area median income (AMI), whichever is greater. This is approximately $94,000 for a family of four.

Household Income	Bill Discount
0-60% FPL	80%
61-120% FPL	40%
121%-150% FPL	20%
The greater of 151%-200% FPL or 80%AMI	15%

Additional Program Details (cont.)

Discounts are calculated as a percentage of customer's bill and are broken into four tiers.

This table illustrates the impact of the discount for an average annual gas gill of $1,340.

Qualifying Income Threshold	Discount	Annual discount (*average annual gas bill of $1,340)	Total annual bill (after discount)
0-60% FPL	80%	$1,072	$268
61-120%FPL	40%	$536	$804
121 - 150%FPL	20%	$268	$1,072
200% FPL or 80% AMI	15%	$201	$1,139

Community and Equity Advisory Group (CEAG) Charter/Operating Guidelines

Background

NW Natural (the Company) has a history of community engagement throughout its service territory and recognizes that improving energy equity is a dynamic and long-standing need. NW Natural supports over 150 community and nonprofit groups in the fields of youth and family resiliency, environmental stewardship, health and human services, and arts and culture.

Energy equity requires expanding access and removing barriers for underserved and overburdened customers. The region is seeing a growth in engagement from community-based organizations as well as increasing awareness by our regulators and policy makers around issues of intersectionality and disparate impacts of energy and climate. These factors, in addition to building upon NW Natural's history of community engagement and commitment to diversity equity and inclusion, have culminated in NW Natural's decision to formulate a Community and Equity Advisory Group.

Purpose

The CEAG is designed to provide NW Natural direct feedback, recommendations, advice, and review on areas related to (a) NW Natural energy system planning and renewable resource development, (b) income-based and arrearage programs, (c) company philanthropic investments, (d) workforce development, and (e) other areas as determined by NW Natural.

The CEAG will have representation from Oregon and Washington to align with the distinct and unique community needs and policy requirements of each state and the areas we serve.

From a place of listening and learning, the Community and Equity Advisory Group (CEAG) seeks out and elevates historically underrepresented voices, perspectives, and lived experiences to advance inclusive practices and institutional actions and bring a racial equity and environmental justice lens to NW Natural's energy and operational planning. Through this deeper community engagement, NW Natural will be positioned to uncover and understand barriers to equitable participation, and, in turn, formulate strategies to address those barriers and center equity in our work ensuring that diversity, equity and inclusion are not merely convenient add-ons, but catalysts for change.

Desired Goals, Outcomes, and Objectives

Deliverables may include drafting recommendations or guidelines for engaging diverse stakeholders, providing concrete feedback and review, and coordinating with other working groups to evaluate recommended strategies for improving energy equity.

Published: September 29, 2022

CEAG Principles

NW Natural operates within five core values: Integrity, Service Ethic, Caring, Safety, and Environmental Stewardship (outlined in detail in NW Natural's Code of Ethics). Reflecting these core values, the NW Natural CEAG will be founded on the principles as listed.

CEAG Principles:

- Integrity
- Transparency
- Openness and Communication
- Accountability (to its Members)

NW Natural Commitments

- Foster an environment which respects and values diversity and inclusiveness
    - Utilize a 3rd party facilitator to establish inaugural charter, processes, methods of communication, and as needed for meeting facilitation, etc.
- Understand and acknowledge the history in which current systems such as energy regulation were formed
- Recognize that serving the Oregon/Washington of today and the Oregon/Washington of the future requires new ways to engage the communities we serve
- Provide clear parameters regarding the decision-making power and/or role of the CEAG throughout the formation and implementation process
- Provide resources to CEAG members to enable understanding of topics as needed
- Commit to an ongoing and iterative learning process.
- Be open to new ideas, and diverse experiences and opinions
- Understand and respect the role of the facilitator
- Be accountable with respect to CEAG feedback and recommendations
    - At each following meeting, NW Natural shall bring back to the CEAG an update on concrete actions, deliverables, etc that were undertaken since the last meeting and under recommendations from the CEAG members
    - NW Natural is open to cocreation of topics for discussion

Representatives from Community-Based Organizations

With the intention to hear from underrepresented voices and experiences, NW Natural is seeking out community-based organizations (CBOs) serving an identity, community, and/or underrepresented population present within the NW Natural service territory who do not currently have a “seat at the table” within energy planning and/or the utility industry. It is up to each CBO to select the correct representative(s) to participate in the CEAG.

Member CBOs are intended to represent a historically underrepresented community or communities. Member CBOs are not intended to represent the beliefs of a single individual. NW Natural will utilize selection criterion that aims to balance diverse representation from both Oregon and Washington. By joining the CEAG, member CBOs are responsible for identifying appropriate representatives to

participate in CEAG activities and ensuring coordination between representatives if more than one staff member is involved.

CEAG Member Commitments

- Participate in scheduled (facilitated) discussions regarding NW Natural's energy system planning, programs, investments, and other topics related to the operations of the Company
- Provide advice, experience, and perspectives from the communities of which the CBO serves, which may include social, economic, racial, tribal, and environmental equity, and assist in identifying best practices/ solutions for improving and expanding equity as a way to inform how NW Natural develops metrics and measures performance
- Understand the regulatory and policy environment in which NW Natural must operate, and to what extent NW Natural has the ability to influence particulars of the energy system and/or planning process
- Commit to an ongoing and iterative learning process
- Be open to new ideas, and diverse experiences and opinions
- Understand and respect the role of the facilitator

CEAG Term of Service

Term of Service:

CEAG participants' terms will run for a length of 2 years with opportunity for renewal. Terms will run (May) to (April) within the year set with the intention of overlapping of membership so that a full turnover is avoided. Members of the inaugural group may be appointed to a three-year term to facilitate such an overlap in membership.

Inaugural Term:

- Year 1: May 2022 – April 2023
- Year 2: May 2023- April 2024
- Year 3 (tentative per each CBO): May 2024- April 2025

Open Positions & Recruitment:

Recruitment will take place each year in the months prior to identified term dates. If a position opens outside of typical recruitment period, NW Natural in consultation with the CEAG and a third-party facilitator may choose whether to fill the position before normal recruitment period.

Calendar and Work Plan for CEAGs

The inaugural CEAG two-year term runs from (May 2022) to (April 2024). During this period, NW Natural anticipates up to 8 meetings across 24 months. CEAG meetings, each with an expected duration of 2-3 hours, depending on the topic(s).

Subsequent CEAG calendars and work plans will be developed by NW Natural and the CEAG.

CEAG Sub-Groups (if applicable):

NW Natural and the CEAG may determine the need for the creation of sub-groups to focus on specific programs and or elements of the energy system planning process.

Roles and Responsibilities

NW Natural:

NW Natural is the convener of the CEAG. The Company provides the services of a third-party facilitator as needed. NW Natural determines final appointments of CBOs to the CEAG and additionally is responsible for final approval of any work plans or activities of the CEAG. The Company is also responsible for ensuring accessibility for members during all CEAG activities.

Community and Equity Advisory Group Members:

The CEAG members must attend meetings, provide direct feedback, advice and recommendations, and reviews of programs and/or materials to the NW Natural team as requested. CEAG members do not need to come to a consensus or have a majority vote in order to provide advice to NW Natural. Members may suggest agenda topics and or areas of focus. Members may designate alternatives from their organization. It is up to each organization to ensure continuity between representatives.

Facilitator(s):

NW Natural will provide a third-party facilitator for inaugural group meetings. The goal of providing facilitator(s) is to help ensure neutral and impartial support to all participants, maintain the integrity of the process, and facilitate communication about the process among participants and other interested parties. The facilitator will work collaboratively with the NW Natural project team to prepare process designs, meeting agendas, materials and final CEAG work products.

Group Conduct/Code of Conduct

CEAG conduct will be governed by the principles of the CEAG and are as follows:

- Integrity
- Transparency
- Openness and Communication
- Accountability (to its Members)

Disagreement and differences of opinion are to be expected, acknowledged, explored, understood, and appreciated. Should conflict arise, it will be addressed with the guidance of the CEAG facilitator. Recurring inappropriate individual behavior may result in an individual being respectfully excused from participation in the CEAG, generally after the following steps have been taken:

- First Notice: A mediated discussion concerning the behavior/disruption/non-conformance between NW Natural, Facilitator/Mediator, and CEAG member
- Opportunity to correct the behavior/disruption/non-conformance
- Second Notice: A mediated discussion concerning the behavior/disruption/non-conformance between NW Natural, third-party Facilitator/Mediator, CEAG member, and CBO leadership
- Opportunity to correct the behavior/disruption/non-conformance

- Continued failure to follow code of conduct will result in removal of the individual CEAG member
- NW Natural and CBO leadership to discuss replacement of member with guidance and input from remaining CEAG members and third-party party facilitator

It is important to note that the above is not a set procedure and the particulars of the individual situation will be considered in how NW Natural proceeds in addressing concerns that may arise.

Compensation

CBOs who have a member serving on the CEAG are provided with an honorarium paid by NW Natural in recognition of their donated time and input. The honorarium is per CBO, per year.

- Year 1: $5,000
- Year 2: $5,000

Operational Guidelines

Meeting Dates and Times:

Meeting dates and times are established in consultation with the group. Meetings take place four times per calendar year, generally meeting, once per quarter.

Quorum Requirement:

There is no quorum requirement; participants present and active at each meeting can continue to work in the absence of others.

Meeting Materials:

Meeting materials may include agendas, reports, resources, and other documentation provided by either NW Natural or members of the CEAG, or facilitator, dependent on topic.

Meeting Location:

Meetings are hosted by NW Natural. Meeting locations are determined by NW Natural in conjunction with CEAG members. The principles of Safety and Inclusion lead all decision making on meeting location determinations. Accessibility accommodations are made as necessary, dependent on the requirement of the meeting location. Hybrid (virtual and in person) meetings may be considered.

Meeting Structure:

To be determined by the inaugural CEAG in conjunction with NW Natural.

Process Documentation:

All CEAG meetings and activities are documented by at least a representative of NW Natural. Further process documentation will be determined as needed in consultation with CEAG members.

Correspondence:

The group may correspond via email, telephone, and/or virtual meeting platforms. NW Natural shall provide a list of correspondence contacts at the start of each CEAG term.

Media, Photography, and Recording:

CEAG participants may speak individually to the media outside of meeting sessions, per the policies of their respective organization, but shall not speak on behalf of the CEAG or NW Natural. Participants may be video recorded, audio recorded and/or photographed by NW Natural or others during the meeting. In these cases, CEAG members are notified in advance when meetings are being video- or audio-recorded. If a member takes issue with any of the above, NW Natural will work with the third-party facilitator to address concerns.

Accessibility:

NW Natural will make the following efforts in order to ensure CEAG meetings and activities are accessible to all CEAG members.

- Provide assistive technology to CEAG members with disabilities, or provide other reasonable accommodations as needed (e.g., large-size print documents, documents formatted for screen readers, etc.).
- Provide language interpretation, as needed/ requested.
- Choose Americans with Disabilities Act (ADA) and transit -accessible venues if meetings are held in person.
- Provide virtual meeting platforms with call-in options to be mindful of limitations in access to technology.

Eligibility for Grants and Resources

NW Natural is seeking strong engagement from local community organizations throughout its service area. It is likely that member organizations engage with NW Natural on multiple fronts across several departments; including, but not limited to the Company's philanthropic giving program, corporate sponsorship offerings, pro bono hospitality services, etc. We welcome this level of engagement and connectivity and the introduction of the CEAG will not change this ethos. The grant programs are an entirely separate processes from CEAG operations and will remain unassociated with CEAG membership and processes. To this end, NW Natural offers the following guidance: participating in -or declining to participate in- the CEAG will not jeopardize, disqualify nor otherwise influence decisions on grant requests, award levels, resource allocations or other offerings.

Confidentiality Agreement

All participants have agreed to a confidentiality through the Participant Agreement. The statement is as follows:

> In order to protect the confidentiality of the community-based organizations (CBOs) and their clients as well as NW Natural customers, all CEAG participants must agree to the following:
>
> - I will not divulge information discussed at meetings, within communications, and/or site visits with anyone except fellow team members, appropriate organization or NW Natural staff, or the third-party Facilitator.

- I will not use privileged information gained as a CEAG member for personal or professional gain.

To create a "culture of candor" and raise awareness, CEAG members are encouraged to disclose and discuss with NW Natural anything that may be potential conflicts of interest relating to matters pertaining to the topics discussed by the group. For example: business relationships with family and friends.

Charter/Guidelines Adoption and/or Amendments

This Charter for the CEAG is considered a living document and as such, a work in progress. The adoption of the inaugural CEAG charter will be achieved through a facilitated discussion and review. The CEAG Charter may be amended consistent with the terms and processes agreed to by the Company and the CEAG. The facilitator will work with the Company and the CEAG to annually evaluate if adjustments to the Charter and Operational Agreements are warranted.

I. INTRODUCTION AND SUMMARY

Q. Please state your name, address, and position with Northwest Natural Gas Company ("NW Natural" or "the Company").

A. My name is Kyle T. Walker. My business address is 250 SW Taylor Street, Portland, Oregon 97204. My current position is Rates/Regulatory Senior Manager in the Rates and Regulatory Affairs Department.

Q. Please state your educational background and experience.

A. I received a Bachelor of Science Degree in Business Administration with an emphasis in Finance from Oregon State University in 2005 and a Master of Business Administration from Willamette University in 2010. In addition, I received an accounting certificate from the University of Washington, and I am a licensed Certified Public Accountant in the State of Oregon with active status and in good standing. Prior to my employment with NW Natural, I held positions at the Bonneville Power Administration ("BPA"), including Risk Analyst, Derivative Accountant, Internal Auditor and Finance Analyst. Prior to BPA, I was a Credit Manager for Wells Fargo. In early 2015, I started at NW Natural as a Rates/Regulatory Analyst and was later promoted to Manager then Senior Manager. In my current role, I am responsible for revenue requirement, regulatory reporting, regulatory strategy, ratemaking, and other regulatory duties as assigned.

Q. Please summarize the multi-year rate plan ("MYRP") sections of your testimony.

A. The MYRP sections of this testimony (Sections II and III) explain NW Natural's MYRP proposal, which is filed to comply with Washington State requirements for extended rate planning and regulatory transparency. The sections outline the

Company's adherence to state law and guidance from the Washington Utilities and Transportation Commission ("Commission" or "WUTC"), describe the MYRP's three-year structure beginning August 1, 2026, and detail methods for setting rates and capital investments. They highlight strategies to safeguard affordability and access to natural gas, implement performance measures, monitor earnings, and support low-income customers. Ultimately, the MYRP testimony demonstrates how the MYRP is designed to ensure regulatory compliance, prudent investment, and accountability to both customers and regulators.

Q. Please summarize the revenue requirements sections of your testimony.

A. The revenue requirements sections of this testimony (Sections IV through XIV) explain the financial adjustments applied to the Test Year and each following rate year (RY1, RY2, and RY3). They describe how restating, pro forma, and provisional adjustments address changes in revenue, expenses, and taxes, and present the rates of return and revenue increases required to reach the Company's targeted financial outcomes. Key references to supporting exhibits and other witnesses' testimonies are also included.

Additionally, the section covers the calculation methodology, including allocation methods and proposed new tariff schedules. These details show how the Company justifies its requested rate changes through clear annual results and the projected revenue increases needed to maintain financial stability across the rate plan.

The section also addresses the Company's proposed deferral amortizations and base rate provisional adjustment rider.

II. MULTI-YEAR RATE PLAN OVERVIEW

Q. Why is NW Natural filing a MYRP?

A. NW Natural is filing a MYRP to comply with RCW 80.28.425(1). Since January 1, 2022, RCW 80.28.425(1) requires natural gas and electric companies to include MYRPs as part of their general rate case filings. NW Natural last filed a Washington general rate on December 18, 2020 and, therefore, NW Natural has included its first MYRP as part of this filing.

Q. What Commission guidance did the Company utilize in preparing its first MYRP?

A. NW Natural utilized the Commission's Used and Useful Policy Statement,[1] which helps clarify how to include future plant in rate base, including incorporating the matching principle. The matching principle is defined in the Used and Useful Policy Statement as "the net effect of including an investment with related offsetting factors."[2]

Additionally, the Commission issued a Policy Statement in Docket U-210590 titled "Interim Policy Statement Addressing Measures and Goals, Targets, Performance Incentives, and Penalty Mechanisms" on April 12, 2024 ("PBR Policy Statement"), which outlines a framework for establishing goals and performance metrics.

Q. What period does NW Natural's MYRP cover?

A. NW Natural is proposing a three-year rate plan with the first rate effective date of August 1, 2026. Rate year one ("RY1") covers August 1, 2026 through July 31, 2027.

---

[1] *In the Matter of the Commission Inquiry into the Valuation of Public Service Company Property that Becomes Used and Useful after Rate Effective Date,* Docket U-190531, Policy Statement on Property that Becomes Used and Useful After Rate Effective Date (Jan. 31, 2020) ("Used and Useful Policy Statement").

[2] Used & Useful Policy Statement, fn. 24.

Rate year two ("RY2") covers August 1, 2027 through July 31, 2028. Rate year three ("RY3") covers August 1, 2028 through July 31, 2029.

Q. What adjustments are you making for your MYRP?

A. The Test Year for NW Natural's MYRP is 12 months ending March 31, 2025. Restating adjustments to the Test Year are performed and a pro forma forecast is added for the period between the end of the Test Year (April 1, 2025) and the first rate effective date (August 1, 2026). For RY1, the Company is proposing capital additions through the pro forma period (July 31, 2026) to help mitigate the impact of the MYRP on customer bills. Provisional capital for RY2 and RY3 will be the 12 months ending July 31, 2028, and July 31, 2029, respectively, as demonstrated in Table 1, below.

Table 1 – Pro Forma and Provisional Capital Additions Over MYRP

Pro Forma and Provisional Capital Additions Over Three Year Rate Plan			
Test Year + Pro Forma	Rate Year 1	Rate Year 2	Rate Year 3
Restating: Apr 2024 – March 2025 + Pro Forma: Apr 2025 – July 2026	**RY1 will use EOP July 31, 2026**	+ Provisional: (RY2) Aug 2027* – Jul 2028	+ Provisional: (RY3) Aug 2028* – Jul 2029
Footnotes: *Rate effective date is 8/1 of the corresponding Rate Year e.g. RY1 is 8/1/2026			

Q. Has the Company met all the requirements of RCW 80.28.425?

A. Yes. As discussed in my testimony below and other witnesses' testimony as summarized in Exh. KAR-ZDK-1T, NW Natural has addressed the following items:

A. RCW 80.28.425(1) – Multi-year Rate Plan Requirements and Public Interest Considerations

B. RCW 80.28.425(2) – Low-Income Energy Burden Provisions

C. RCW 80.28.425(3) – Commission Determinations for Property Valuation, Revenues, and Operating Expenses

D. RCW 80.28.425(4) – Commission Authority to Establish Terms and Ensure Just and Reasonable Rates

E. RCW 80.28.425(5) – Binding Commitments and Filing Options for Subsequent Rate Years

F. RCW 80.28.425(6) – Earnings Sharing and Deferral Requirements

G. RCW 80.28.425(7) – Performance Measures and Accountability Standards

III. MULTI-YEAR RATE PLAN PROPOSAL

A. Multi-Year Rate Plan Requirements and Public Interest Considerations

Q. Please describe how NW Natural's MYRP complies with RCW 80.28.425(1).

A. As stated above, RCW 80.28.425(1) requires gas and electric companies to include a MYRP in every general rate case filing. The Commission's consideration of the MYRP is subject to the same standards applicable to other rate filings, including the public interest and fair, just, reasonable, and sufficient rates. In considering the public interest, the Commission may consider such factors including, but not limited to:

> environmental health and greenhouse gas emissions reductions, health and safety concerns, economic development, and equity, to the extent such factors affect the rates, services, and practices of gas or electric company regulated by the commission.[3]

The Company is proposing a three-year plan that is in the public interest and that results in fair, just, reasonable, and sufficient rates. It aligns with the Commission's matching principle, as explained in paragraph 20 of the Commission's Used and Useful Policy Statement, by synchronizing cost recovery with the timing of investments and their associated benefits, ensuring customers pay rates that reflect the costs incurred to serve them.[4] Additionally, the plan incorporates offsetting cost savings from operational efficiencies, retirements, customer contributions, customer growth revenues, and deferred income taxes, helping to mitigate rate impacts while maintaining safe, reliable, and sustainable service that is in the public interest.

Q. Has the Company demonstrated the proposal is in the public interest by discussing environmental health and greenhouse gas emission reductions, health and safety concerns, economic development, and equity?

A. Yes. Direct Testimony provided by Ms. Braun (Exh. HJB-1CT) regarding NW Natural's proposed Vancouver thermal energy network pilot discusses the environmental benefits of the project, including greenhouse gas emissions reductions,

[3] RCW 80.28.425(1).

[4] The Commission generally describes the matching principle as the principle that costs should be matched to offsetting factors and specifically as the net effect of including an investment with related offsetting factors. "In other words, the matching principle requires that all factors affecting a proposed pro forma adjustment (or proposed provisional pro forma adjustment) include pro forma level (or provisional pro forma level) revenue, rate base, and expense." Used and Useful Policy Statement at note 24. The Commission also recognizes that the matching principle is also a generally accepted account concept that requires companies to recognize (match) revenues earned to related expenses in the same period.

the development of downtown Vancouver, and how the project promotes equity by being located in a census tract that is among the most impacted in the State across all metrics of the Washington Environmental Health Disparities Map. Mr. Kizer and Mr. Johnson (Exh. DBK-SSJ-1T) discuss safety-related projects. Ms. Tanaka (Exh. CJT-1T) describes how NW Natural continues to strengthen and incorporate considerations of energy equity and affordability into its day-to-day operations and program offerings to customers, as shown by increasing participation in the Company's Bill Discount Program, expanding our Washington Low-Income Energy Efficiency ("WALIEE") program, and completing our second Energy Burden Assessment, as well as enhancements to several other energy affordability and equity programs.

B. Low-Income Energy Burden Provisions

Q. Please describe the Company's application of RCW 80.28.425(2) regarding low-income customers.

A. Under RCW 80.28.425(2) utilities may recover up to five percent of their annual revenue requirement to fund tariffs reducing energy burden for low-income customers (e.g., bill assistance, or bill discount programs). Rate increases in an MYRP must include an increase in low-income assistance, at least double the rate increase percentage.

For calendar year 2024, the Company collected 2.7 percent of its revenue requirement related to bill assistance and/or the bill discount program, as illustrated in Table 2 below. These income-qualified programs are discussed in detail in the Direct Testimony provided by Ms. Tanaka (Exh. CJT-1T). All of these programs reduce the

energy burden of income-qualified customers and are authorized under tariffs approved by the Commission, consistent with RCW 80.28.425(2).

Table 2 – 2024 Bill Assistance and Bill Discount Program as Percent of Revenue[5]

Bill discount program	$1,937,820	Advice 24-15; UG-240881
GREAT program	$867,320	Advice 24-08; UG-240696
WALIEE program	$115,495	Advice 24-08; UG-240696
Arrearage Management Program	$0	cost recovery to start in 2025 PGA
Income-eligible programs	$2,920,635	
2024 Washington CBR Normalized Revenue	$109,949,935	
Program costs as % of Revenue	2.7%	

Q. What is five percent of the Company's proposed revenue requirement for each year of the MYRP?

A. Five percent of the proposed revenue requirement for RY1, RY2, and RY3 are $6.88 million, $7.35 million, and $7.82 million, respectively.

Q. Please explain the cost recovery approach for the Company's income-qualified programs funding.

A. As illustrated in the table above, the Company's energy affordability programs for income-qualified customers include the residential bill discount program, the Gas Residential Energy Assistance Tariff ("GREAT") program, the WALIEE program, and the Arrearage Management Program ("AMP"). The funding for all of these programs is based on the actual costs incurred for the programs, reflecting the actual uptake of the programs and related administrative costs. These costs are incurred and recorded in a deferred account or a balancing account in the case of the bill discount program.

[5] See electronic Exh. KTW-10.

NW Natural then seeks cost recovery of these accounts annually, usually with the Purchased Gas Adjustment ("PGA") filings made in September. Thus, there is no pre-set budget for these programs; instead, funding for these programs follows the program need and expands as the participation in the programs or administrative costs increase.

Q. How does the funding approach for these programs affect how the Company is addressing income-qualified assistance for its proposed rate increases?

A. As a practical matter, it has been a complex exercise to navigate the provision of RCW 80.28.425(2) requiring an increase in funding for income-qualified programs at an amount at least double the percentage of the rate increase in each year of a MYRP. This is due to the manner in which the funding for these programs operates, as described above. It is difficult to increase funding amounts independent of the actual need of the programs because all of the programs are funded backward-looking to reflect actual costs expended. As a result, increasing funding for these programs will be dependent on increased participation. Both the bill discount program and the AMP will continue to see growth in customer participation due to being early in their history, with the programs beginning in January 2024 and April 2025, respectively. In the case of the bill discount program, increased funding may also be needed if the bill discount percentages are increased. As described in Ms. Tanaka's Direct Testimony (Exh. CJT-1T), an analysis indicates that the current bill discount program discount percentages remain adequate at targeting energy burdens of around 2 percent even with a total rate increase of 35 percent. Thus, the Company is not proposing to change the bill discount percentages in this case. However, if participation in either program causes the costs

of the program to exceed double the percentage of the rate increase in this rate case, NW Natural is supportive of this increase.

The current tariff for the GREAT program does include a soft cap for program costs of $500,000.[6] However, the tariff allows for exceeding the $500,000 upon consultation with the GREAT Advisory Group, and, as described in Ms. Tanaka's Direct Testimony (Exh. CJT-1T), GREAT expenditures have exceeded the threshold for the past two program years. In keeping with the provision in RCW 80.28.425(2), NW Natural is proposing to increase the cap listed in the GREAT tariff by 50 percent, resulting in a cap of $750,000. Note that even with the increase in the cap for GREAT, the cost recovery of the expense for GREAT will continue to reflect the actual spend of the program.

Q. How is NW Natural addressing income-qualified assistance for its proposed rate increases?

A. As described above, the funding for the Company's energy affordability programs typically occurs with the PGA filings each September and reflects the actual spend of the programs, which grows with increased customer participation. NW Natural is therefore proposing to increase the funding for these programs with the PGA filings and not in this rate case. Thus, the required increase of at least double the amount of the residential base rate increase approved will be achieved in the rate effective year of each year in the Company's MYRP. For example, RY1 rates will take effect August

[6] See NW Natural's Washington Tariff Schedule J Gas Residential Energy Assistance Tariff (GREAT) at: https://www.nwnatural.com/-/media/nwnatural/pdfs/wa-tcn/6jai_2024.pdf?rev=9152f758bf2f4500addf30256adc3527&hash=269487404A952B1A49D47673C085D6C6.

1, 2026, and the increase for the Company's income-qualified programs will be filed with the 2026 PGA with rates effective November 1, 2026, and reflect an increase that is double that of the residential rate increase. The funding increase for the programs will reflect increases expected in the bill discount program and AMP as the programs continue to grow. The same follows for the succeeding years of the MYRP. In this way, NW Natural will meet the requirements outlined in RCW 80.28.425(2).

C. Commission Determination for Property Valuation, Revenues, and Operating Expenses

Q. How did the Company decide which property to place in rates for this proceeding?

A. NW Natural referred to both the MYRP statute, specifically RCW 80.28.425(3), and the Commission's Used and Useful Policy Statement for guidance to determine the appropriate property to be included in rates. The Used and Useful Policy Statement states that property must be in service and providing benefits to ratepayers within the rate-effective period, which can extend up to 48 months, and RCW 80.28.425(3) requires the Commission to separately approve rates for each of the individual rate years based on the fair value of the property that goes into service each year.

The Commission allows flexibility in determining fair value by permitting adjustments for property that becomes used and useful after the rate-effective date. However, companies must demonstrate that investments are prudent, used, and useful, and provide proper evidentiary support for cost recovery. The Commission also adopts a retrospective review approach, where rates are subject to refund if projected investments are not used and useful as of the rate effective date, but are nonetheless expected to enter service during the rate year. Additionally, offsetting factors such as

revenue growth or expense reductions must be considered to ensure that rate adjustments are fair, just, and reasonable.

Q. Is the Company proposing to include property in rates that becomes used and useful after the rate-effective date in each rate year?

A. No. For RY1, the Company used plant balances as of July 31, 2026, marking the end of the pro forma period to mitigate the size of the rate increase in RY1. By voluntarily taking regulatory lag for investments entering service during RY1, NW Natural is seeking to limit the size of the RY1 rate increase. In addition, NW Natural is not proposing to include the reasonable cost of construction work in progress in valuing its plant, although the Commission has the discretion to include such costs under RCW 80.04.250(2).

Q. Is the Company providing detailed explanations for increases to rate base?

Yes, the Company has incorporated pro forma and provisional capital adjustments, as detailed in Table 3, below, organized by Company witnesses and categorized according to the Commission's Used and Useful Policy Statement utilizing Large and Distinct, Projected Programmatic, and Short-Lived to align with Commission policy. The amounts in Table 3 below include the total capital additions, not the average of monthly averages ("AMA") that are included within the revenue requirements.

Table 3 – Pro Forma and Provisional Capital Additions by Witness[7]

NW Natural Pro Forma Additions by Witness					
Witness	Large and Discrete	Projected	Programmatic	IT Short Lived [1]	Provisional Total
Moncayo	-	-	1,172,179	-	1,172,179
Fellon	-	-	-	9,949,793	9,949,793
Kizer	1,338,722	16,277,911	15,789,731	-	33,406,363
Pipes	327,472	-	-	-	327,472
Karney	10,279,937	-	-	-	10,279,937
Braun	-	-	-	-	-
Walker	-	-	190,604	-	190,604
RY1 Additions (Apr 2025 - Jul 2026)	**11,946,131**	**16,277,911**	**17,152,514**	**9,949,793**	**55,326,349**

NW Natural Provisional Additions by Witness [2]					
Witness	Large and Discrete	Projected	Programmatic	IT Short Lived [1]	Provisional Total
Moncayo	-	-	889,683	-	889,683
Fellon	-	-	-	18,570,440	18,570,440
Kizer	15,583,137	32,319,761	18,687,903	-	66,590,800
Pipes	175,135	-	-	-	175,135
Karney	3,453,949	-	-	-	3,453,949
Braun	12,829,642	-	-	-	12,829,642
RY2 Additions (Aug 2026 - Jul 2028)	**32,041,862**	**32,319,761**	**19,577,586**	**18,570,440**	**102,509,648**
Moncayo	-	-	1,141,825	-	1,141,825
Fellon	-	-	-	9,242,541	9,242,541
Kizer	22,128,861	20,858,956	7,527,792	-	50,515,608
Pipes	147,076	-	-	-	147,076
Karney	-	-	-	-	-
Braun	-	-	-	-	-
RY3 Additions (Aug 2028 - Jul 2029)	**22,275,937**	**20,858,956**	**8,669,617**	**9,242,541**	**61,047,050**

[1] IT Short-lived may include programmatic and large and discrete
[2] Capital additions that occur in RY1 are included in RY2 rates

Pro forma adjustments reflect capital put in service between the end of the Test Year (April 1, 2025) and the first rate effective date (July 31, 2026). Provisional adjustments reflect all capital additions over the following periods:

- RY2: Capital investments from August 2027 through July 2028
- RY3: Capital investments from August 2028 through July 2029

[7] See electronic confidential Exh. KTW-11C.

As described above, RY1 does not include provisional adjustments, in order to mitigate rate impacts to customers. Instead, the Company is including only those capital investments that are in-service as of the end of the pro forma period (July 31, 2026) in RY1 rates. The Company has also incorporated offsets to revenue, operating and maintenance ("O&M") expenses, retirements that reduce depreciation expense, customer advances, deposits, and deferred taxes to help reduce revenue requirements. The resulting table shows the revenue requirement reductions by rate year.

Table 4 – Revenue Requirement Offsets by Rate Year[8]

	Test Year	Pro Forma	RY 1	RY 2	RY 3
Customer Growth Revenues	$ -	$ (970,547)	$ (338,717)	$ (540,633)	$ (804,921)
O&M Savings	$ (723,087)	$ (11,215)	$ -	$ -	$ -
Retirements	$ -	$ (523,634)	$ (239,978)	$ (562,519)	$ (417,450)
Accumulated Depreciation (Excl. Retirements)	$ (526,347)	$ (1,781,700)	$ -	$ (2,289,253)	$ (1,812,127)
Accumulated Deferred Income Taxes	$ -	$ (83,330)	$ -	$ (141,279)	$ (49,404)
Customer Advances and Deposits	$ (78,462)	$ (185,806)	$ -	$ (153,854)	$ -
Excess Deferred Income Taxes (EDIT)	$ -	$ -	$ (33,140)	$ -	$ -
Revenue Requirement Offsets incl. EDIT	**$ (1,327,896)**	**$ (3,556,233)**	**$ (611,835)**	**$ (3,687,537)**	**$ (3,083,902)**

Q. How is the Company proposing to review RY1 pro forma capital?

A. The Company proposes reviewing pro forma capital for RY1 in a similar manner to the provisional capital review as described below. A Pro Forma Plant Report will be filed within four months of the rate effective date of RY1 (August 1, 2026).

Q. How is the Company proposing to review RY2 and RY3 provisional capital?

A. The Company is proposing an annual retrospective review process for all provisional capital investments as envisioned by the Commission's Used and Useful Policy Statement. Within four months following the end of RY2 and RY3, respectively,[9] NW

[8] See electronic Exh. KTW-12.

[9] As stated above, NW Natural is not proposing to include any provisional capital as part of RY1 rates. Therefore, this process would not be necessary at the end of RY1.

Natural will file a report for utility plant that was placed into service during that rate year, called the Provisional Plant Report.[10] All parties will have the opportunity to review the evidence, conduct discovery, and review provisional plant. Similar to other utility rate cases, parties will have six months to conduct their prudence review for capital set forth in the Company's Provisional Plant Report.[11]

After non-Company parties submit their responses to the Commission, NW Natural will file a petition to amend the final order in this docket in accordance with WAC 480-07-875 by June 1. The petition will indicate whether the parties agree to the proposed rate change or if a dispute exists that would require further process under WAC 480-07-875. If there is no dispute, the petition will specify any changes to the rate year based on updated information or explain that no changes are necessary. The Commission will then issue an Order by July 15 to ensure adequate time to reflect any changes to rates, such as a refund, that would be needed by August 1, the start of the next rate year, or introduce an alternative process.

[10] Cascade Natural Gas filed its provisional plant review four months after its latest rate effective date from UG-240008.

[11] *In the Matter of Washington Utilities and Transportation Commission v. Cascade Natural Gas Corporation,* Docket UG-240008, Order 05, at 21. *"…the Settling parties agreed to require Cascade to "file an annual provisional plant report by April 30th of each year" and provide non-Company parties "six months to review" the prudency of the projects contained in the report*" (Feb. 24, 2025).

Q. How should the Commission view the overall portfolio of capital for each rate year?

A. The pro forma (RY1) and provisional capital additions should be evaluated as a portfolio of projects, not on a project-by-project basis.[12] This treatment captures any unforeseen cost increases or decreases for all capital projects included in the rate year. In addition, this treatment would include any new capital that may not have been included as capital in the rate year due to operational or emergency type situations.

If the total capital additions are below the amount approved by the Commission in the rate year, refunds will be given back to customers, in the appropriate revenue requirement amounts, based on the rate spread established in this case. Furthermore, recovery of capital investment will be capped at the overall plant additions approved by the Commission for each rate year.

Q. What details will be included in the Pro Forma and Provisional Plant Reports?

A. Each annual report will include the following comparison of the actual capital additions versus the Commission-approved capital for that rate year:

A. Actual capital versus authorized capital, with explanations for significant cost variances, defined as variances greater than 10 percent and $500,000 from the authorized amount;

B. Actual in-service date;

[12] *In the Matter of Washington Utilities and Transportation Commission v. Avista Corporation,* Docket UE-240006 & UG-240007, Order 08, at 230. "*Consistent with the Commission's Used and Useful Policy, the provisional plant review process should continue to be conducted on a portfolio basis, with a six-month review period, with consistent classification of plant and naming conventions, and shall not be tracked through a separate tariff at this time"* (Dec. 20, 2024*).*

C. Any material changes to the project descriptions;

D. In the case of significant cost overruns, an update to the project description that includes justification to continue investing in the project;

E. Updated information (if any) on offsetting factors that impact capital; and

F. Detailed description of any material capital projects not approved by the Commission's Final Order.

D. Binding Commitments and Filing Options for Subsequent Rate Years

Q. Please describe the details of RCW 80.28.425(5).

A. Once its MYRP is approved by the Commission, the Company is required to adhere to the terms of such MYRP for the first two rate years. However, for the third year, the Company has the option to file a new MYRP rather than continuing under the existing plan. This provision ensures that while the early years of the MYRP remain fixed, the Commission has authority, as described in RCW 80.28.425(4), to establish conditions and processes for outer rate years as long as the rates are fair, just, reasonable, and sufficient.

Q. Is the Company proposing a process for the third year of the proposed MYRP?

A. Yes. NW Natural is seeking a three-year plan because it best balances the cost of filing rate cases with recovery of investments and expenses over time. However, a three-year plan presents additional uncertainty for the Company compared to a two-year plan. Accordingly, NW Natural proposes a re-evaluation process prior to RY3.

Q. Please describe what you mean by a re-evaluation process.

A. Six months before the rate effective date of RY3 (August 1, 2028), the Company would file to update its revenue requirements for all components, including provisional plant

and O&M expenses, if the revenue requirements are more or less than 25 percent of the original filing, or $2.07 million. This process re-opens the MYRP to make updates that were unforeseen at the time of the original filing.

Q. What would be included in the re-opening filing?

A. The re-opening filing would include justification for revenue requirements changes greater or less than 25 percent from our original filing for RY3 and an updated revenue requirement would be proposed.

Q. What would occur during the four-month re-opening process after NW Natural files?

A. Once NW Natural files revisions to its rate year three revenue requirements, the parties to this case may submit discovery and review the filing. Two months before the rate effective date (June 1, 2028), each party may file a response to this docket with a recommendation and justification to the Commission. NW Natural will file a petition to amend the final order in this docket in accordance with WAC 480-07-875 by June 15, 2028. The Commission would then have five weeks to issue an amended order with updated revenue requirements.

Q. How would the Company implement new rates for RY3?

A. The Company will await the Commission order and submit a compliance filing prior to the rate effective date of RY3 (August 1, 2028).

E. Earnings Sharing and Deferral Requirements

Q. Please describe the details of RCW 80.28.425(6).

A. If a utility's annual commission basis report shows that its reported rate of return exceeds the Commission-authorized rate by more than 0.5 percent for a twelve-month

period, the utility must defer all excess revenues for refunds to customers or another determination by the Commission in a future adjudicative proceeding.

Q. How does the Company propose to address reported rates of return that exceed the Commission-authorized rate by more than 0.5 percent for a twelve-month period?

A. NW Natural currently submits a Commission Basis Report ("CBR") to the Commission by May 1 each year. This report captures the normalized operations over the reporting period and is aligned with the approved adjustments established in the most recent general rate case.

If the CBR reveals earnings more than 0.5 percent above its Commission authorized rate of return, the Company will defer the excess. The deferred amounts will be credited to customers coincident with the following year's PGA filing on an equal percent of margin basis to all customers. This ensures that customers benefit directly from any surplus earnings, in accordance with RCW 80.28.425(6), and allows a process if RY3 has excess earnings.

F. Performance Measures and Accountability Standards

Q. Please describe the details of RCW 80.28.425(7).

A. The Commission must determine performance measures when approving a MYRP for a utility. These measures are used to assess the utility's operations under the MYRP and can be based on proposals from the utility, other parties in the proceeding, or evidence presented during the review. In developing performance measures, incentives, and penalty mechanisms, the Commission may consider a variety of factors, including, but not limited to: lowest reasonable cost planning, affordability, increases

in energy burden, cost of service, customer satisfaction and engagement, service reliability, clean energy or renewable procurement, conservation acquisition, demand-side management expansion, rate stability, timely execution of competitive procurement practices, attainment of state energy and emissions reduction policies, rapid integration of renewable energy resources, and fair compensation of utility employees.[13]

Q. Please describe additional guidance under the Commission's Performance Metrics Policy Statement issued in Docket U-210590.

A. In the PBR Policy Statement issued in Docket U-210590, the Commission provided general guidance and opinions of PBR and established guiding principles, goals and a preferred set of metrics without defining certain terms and calculations for those metrics. Subsequently, on August 2, 2024, the Commission issued its "Policy Statement Addressing Initial Reported Performance Metrics" ("Performance Metrics Policy Statement") wherein the Commission provided a performance framework built around three primary objectives for MYRPs: 1) developing resilient, reliable, and customer-focused distribution systems; 2) enhancing customer affordability; and 3) advancing equity in utility operations, and another goal pending adoption related to supporting environmental improvements. These objectives align with broader state policies and introduce a structured approach to tracking utility progress through measurable outcomes.

[13] *See* PBR Policy Statement at para. 2.

Q. How does the Company address performance metrics in the MYRP?

A. NW Natural's performance metrics reporting is organized around three strategic goals that align with NW Natural's business principles: ensuring a resilient, reliable, and customer-focused distribution grid; promoting customer affordability; and advancing equity in utility operations. The performance measures proposed by NW Natural largely reflect those described and recommended in the Commission's Performance Metrics Policy Statement in Docket U-210590.[14] For a comprehensive discussion and detailed performance metrics, please refer to the Direct Testimony of Ms. Siores in Exh. NCS-1T.

IV. REVENUE REQUIREMENT

Q. Please provide a brief overview of the elements of revenue requirement, and how it is pertinent to a general rate case.

A. The Company's revenue requirement, or cost of service, represents the total annual cost to serve its customers. Costs primarily consist of gas costs (i.e., cost of goods sold), operating and maintenance costs, revenue-related costs, and investment-related costs.

Gas costs include commodity and upstream pipeline costs.[15] Operating and maintenance costs include payroll and other non-capital costs of serving customers. Revenue-related costs, or other taxes, are primarily comprised of franchise taxes, but

[14] *In the Matter of the Proceeding to Develop a Policy Statement Addressing Alternatives to Traditional Cost of Service Rate Making,* Docket U-210590, Policy Statement Addressing Initial Reported Performance Metrics (Aug. 2, 2024).

[15] Although gas and upstream gas supply costs are a major cost for the Company, and form a part of NW Natural's revenue requirement, these costs are recovered through the Company's PGA, and not as part of the Company's base rates, which we seek to modify through this general rate case proceeding.

also include Washington's utility tax, the statutory commission fee, and uncollectible expense. Investment-related costs include the return of investment, or depreciation, and the return on investment, which includes the costs of debt and equity to finance our investments.[16] Federal and State income taxes are also a cost to serve customers. The elements of the revenue requirement are shown below in Table 5.

Table 5 – Elements of Revenue Requirement

Cost of Capital (Debt and Equity)
+ Income Taxes (Federal and State)
+ Other Taxes
+ Depreciation Expense
+ Operating & Maintenance Expense
+ Cost of Gas
= Revenue Requirement

Investment costs are related to the Company's rate base, which include several components, but are primarily net plant. Net plant represents the assets that have been acquired or constructed by the Company for purposes of serving its customers, and which are being financed by the Company. Rate base also includes certain other items that are financed, such as gas inventory in storage, working capital, and leasehold improvements. There are also amounts that are received by the Company that reduce the amount of financing required. The largest of those amounts is deferred income taxes, primarily due to differences in depreciation expense between book accounting and tax accounting. The higher level of tax depreciation expense has historically created a financing benefit by lowering the current income tax liability for the

[16] Investment-related costs also include income and property taxes associated with earnings and plant balances, respectively.

Company. Therefore, I factor in that benefit as a reduction to the total amount of investments, or rate base. The overall rate base, including all these components, represents the amount that requires financing from shareholders and bondholders. Table 6 below shows the elements of rate base.

Table 6 – Elements of Rate Base

Utility Plant in Service:	
	Gross Plant
+	Accumulated Depreciation
=	Net Plant
Other Rate Base Items:	
	Aid in Advance of Construction
+	Customer Deposits
+	Gas Inventory
+	Leasehold Improvements

+	Working Capital
=	Total Other Rate Base Items
Net Plant	
+	**Total Other Rate Base Items**
=	**Total Rate Base**

The aggregation of gas costs, O&M costs, revenue-related costs, and investment-related costs represents the annual amount that is needed to be recovered from the Company's customers. Our incremental revenue requirement is the amount of additional revenue needed over the amount already generated by existing rates, so that the Company can recover its costs and has an opportunity to earn its authorized return on equity ("ROE").

Q. Please walk through the steps taken to compile the revenue requirement proposed in this case for RY1.

A. The first step in the revenue requirement calculation is to determine the amount of revenue that will be generated in RY1 at current rates.[17] To do this, the Company forecasts customers and the average use-per-customer for residential and commercial customers as well as a forecast of usage for current industrial customers.[18] This is done through both restating adjustment via weather normalization as well as pro forma and provisional adjustments to get the correct revenue estimated for RY1.

The second step is to forecast the operating costs and depreciation expense the Company will incur during the pro forma and provisional periods.[19]

The third step is to forecast rate base for the Rate Year. Rate base includes capitalized costs such as utility plant in service, gas inventory, cash working capital, and leasehold improvements offset by accumulated deferred income taxes, aid in advance of construction and customer deposits. Rate base forecasts account for retirements and capital additions.

After these first three steps, we can determine the estimated rate of return on rate base and return on equity in RY1 at current rates. Due to the ROE being below recommended levels using forecasted revenue at current rates, the Company proposes to increase revenues to generate a reasonable return in RY1 after accounting for the

[17] This includes estimated use-per-customer amounts and a forecast of customer counts for the Rate Year.

[18] See Mr. Wyman's Direct Testimony at Exh. RJW-1T.

[19] Operating costs include gas costs, operating and maintenance expense, uncollectible expense, state and federal income tax, property tax, other tax, and depreciation expense. Please see Mr. Davilla's Direct Testimony at Exh. TFD-1CT.

forecasted operating revenues, operating expenses, taxes, return of investment (depreciation expense), and return on investment of Test Year rate base.

The fourth step is to propose a recommended capital structure, cost of debt and cost of equity (ROE) to determine the proposed increase to revenues needed to generate a reasonable rate of return.

Table 7 below shows the steps taken for the proposed increase to revenue requirement:

Table 7 – Revenue Requirement Process Steps

Step 1	**Step 2**	**Step 3**	**Step 4**	**Proposed Increase**
Forecasted Customers and Usage x Current Rates =	Forecast Test Year Operating + Forecast Return of Investment (Depreciation Expense) =	Forecast Capital Additions + Current Rate Base =	Proposed Capital Structure and Proposed Cost of Debt and Equity =	**Incremental Revenue Requirement** + Steps 1-3 =
RY1 Revenue at Current Rates	**Forecasted Expenses for RY1**	**Forecasted Rate Base for RY1**	**Proposed Rate of Return (%) on Rate Base**	**Proposed Rate of Return ($) on Rate Base**

Q. What is the Company's proposed increase to revenue requirement for RY1 highlighting the steps above?

A. The proposed increase to revenue requirement is $25.6 million in RY1, as shown in Table 8 below.

Table 8 – Process Steps with Proposed Increase[20]

Line No.	Test Year at Present Rates	Restating Adjustments (STEP 1 STEP 2)	Test Year Adj. at Present Rates	Pro Forma and Provisional RY 1 Adjustments (STEP 1 STEP 2)	RY1 Adjusted at Present Rates	Proposed RY1 Rate Increase (STEP 4)	RY1 Total
	(a)	(b)	(c)	(d)		(e)	(f)
Revenues	$106,570,987	$3,256,211	$109,827,198	$2,209,080	$112,036,277	**$25,557,744**	$137,594,022

Rate of Return	5.550%		3.347%		1.864%		7.505%
Return on Common Equity	6.41%		1.81%		-0.96%		10.10%

Q. Please describe how the testimony presented in this rate case establishes NW Natural's revenue requirement within the steps you presented above.

A. Step one is presented by me within this testimony, Exh. KTW-1T.

Step two involves forecasts of operating expenses in the following pieces of testimony:

- Melinda B. Rogers' Direct Testimony (Exh. MBR-1CT) demonstrates NW Natural's costs of labor, including compensation and benefits for our non-bargaining unit employees, bargaining unit employees and executives.

[20] See electronic Exh. KTW-2.

- Cory A. Beck's Direct Testimony (Exh. CAB-1T) describes the costs associated with our customer communications and language access.
- Daniel B. Kizer and Scott S. Johnson's joint Direct Testimony (Exh. DBK-SSJ-1T) describe the operating expenses associated with the Company's safety and other regulatory compliance projects and programs.
- Wayne K. Pipes' Direct Testimony (Exh. WKP-1T) describes the operating expenses associated with the Company's facilities.
- Brian E. Fellon's two pieces of Direct Testimony (Exh. BEF-1CT and Exh. BEF-23HCT) describe the Company's operating expenses related to Information Technology & Services ("IT&S") and the United States Department of Homeland Security's Transportation Security Administration's ("TSA's") security directives, respectively.
- Joe S. Karney's Direct Testimony (Exh. JSK-1T) describes the operating expenses associated with the Company's Meter Modernization Program.
- Tobin F. Davilla's Direct Testimony (Exh. TFD-1CT) describes all other operations and maintenance expense, and the total level of expense the Company will incur in each rate year.
- John J. Spanos' Direct Testimony (Exh. JJS-1T) describes the Company's depreciation study and presents the proposed depreciation rates for RY3 in this case.
- Holly J. Braun's Direct Testimony (Exh. HJB-1CT) describes the proposed thermal energy network project that will begin to be recovered in RY2.

Finally, I describe the Company's income tax expense and the proposed Excess Deferred Income Taxes ("EDIT") amortization resulting from federal income tax reform in 2017.

Step three, related to forecasted rate base, comprises the following testimony:

- Mr. Kizer's and Johnson's Direct Testimony (Exh. DBK-SSJ-1T) describes the capital additions associated with the Company's distribution and storage projects.
- Mr. Pipes' Direct Testimony (Exh. WKP-1T) describes capital additions associated with the Company's facilities.
- Mr. Fellon's Direct Testimonies (Exh. BEF-1CT and Exh. BEF-23HCT) describe the Company's capital additions related to IT&S and TSA's security directives, respectively.
- Mr. Karney's Direct Testimony (Exh. JSK-1T) describes the capital additions associated with the Company's Meter Modernization Program.
- Jorge O. Moncayo's Direct Testimony (Exh. JOM-1T) describes the capital budgeting, management approval and project lifecycles as well as discrete vs. non-discrete capital.
- Ms. Braun's Direct Testimony (Exh. HJB-1CT) describes the proposed thermal energy network project that will begin to be recovered in RY2.

In conjunction with these pieces of testimony, my calculations demonstrate NW Natural's rate base that is used in serving our Washington customers.

Step four, NW Natural's required return on rate base, is established in the following testimonies:

- Brody J. Wilson's Direct Testimony (Exh. BJW-1CT) provides evidence of NW Natural's cost of debt, and the amount of debt and equity the Company uses to finance its investments and operations.
- Jennifer E. Nelson's Direct Testimony (Exh. JEN-1T) provides evidence of the return that NW Natural should pay shareholders to continue to attract their investment in the Company through purchasing common stock.

The proposed increase is the culmination of operating costs, depreciation expense, taxes and the return on rate base less revenue forecasted at current rates for the Rate Year, displayed in Exh. KTW-2.

Q. How are revenue requirements calculated for RY2 and RY3?

A. The process mirrors RY1, but for revenue, the approved rates from RY1 are applied to RY2. Further, the approved rates from RY2 are applied to RY3. As a result, RY2 and RY3 revenue requirements largely depend on RY1, highlighting the need for fair outcomes for both customers and the utility.

V. TEST YEAR RESULTS

Q. What is the purpose of this section of your testimony?

A. The purpose of this section of testimony is to present the Company's financial results for its Washington operations for the Test Year. The Test Year that is being evaluated by the Company to determine the need for a rate increase is the 12-months ended March 31, 2025. The determination of actual results for the Test Year is primarily accomplished by Washington revenue, a state allocation of expense items, as well as the construction of rate base for the period. I will refer to Exh. KTW-3, which I have prepared for the explanation of the Test Year results.

Q. Why was the 12-months ended March 31, 2025, chosen as the Test Year for this rate case?

A. The period was chosen because 1) it provided data that included full quarterly information for accounting purposes, and 2) it was the most recent data available for the preparation of the rate case filed August 29, 2025.

Q. Please describe the components of Exh. KTW-3.

A. Page 1 of the exhibit presents the results of operations for the entire gas utility (i.e., system) for the Test Year in column (a), and the results of operations for Washington in column (b). The Company has two gas utility jurisdictions, Washington and Oregon.

Pages 2 and 3 of Exh. KTW-3 show the allocation of system operations and maintenance ("O&M") expense to Washington and Oregon by Federal Energy Regulatory Commission ("FERC") account. Allocation methodology is discussed later in my testimony.

Page 4 is a listing of all allocation factors used to allocate costs between the Company's two gas utility jurisdictions.

Page 5 displays the income tax calculation for Washington and system in the Test Year. Furthermore, it identifies the book and income tax permanent differences, federal tax credits as well as the amortization of excess deferred income taxes ("EDIT") that arose from the 2017 Tax Cuts and Jobs Act ("TCJA").

Pages 6 and 7 display the Test Year system and Washington rate base, including deferred taxes and other rate base items such as storage gas, customer advances and leasehold improvements.

Page 8 of Exh. KTW-3 shows the cost of capital, including long- and short-term debt and common equity during the Test Year, as well as revenue sensitive costs such as uncollectible expense, Washington utility tax and the WUTC regulatory fee.

Q. Please explain operating revenues and cost of gas on page 1 of Exh. KTW-3.

A. The operating revenues on lines 1 through 4 and the gas cost on line 5 reflect 12-month ended results through March 2025. The revenues for Washington are almost all direct; that is, they are the actual revenues generated from Washington during the 12-month Test Year. The exception is the allocation of utility property rental income under Miscellaneous Revenues, which are allocated between Washington and Oregon. The gas costs for Washington are calculated to correspond precisely to the gas costs collected in billing rates over the period, with inclusion of gas cost deferrals, to ensure the actual costs incurred are presented.

Q. Please explain operating expenses and taxes on page 1 of Exh. KTW-3.

A. Line 6 identifies uncollectible expense and line 7 represents other O&M Expense. There are substantial common costs within O&M expense; therefore, it is necessary for many system amounts to be allocated to both Washington and Oregon.

Line 9 of page 1 represents the environmental expense associated with clean-up activities captured in the Company's Environmental Cost Recovery Mechanism ("ECRM").

Lines 10 and 11 of page 1 represent the federal income taxes and Oregon excise taxes reported for the Test Year on a system and Washington basis. Page 5 of Exh. KTW-3 shows the derivation of the income tax expense for Washington. Utility income before income taxes was used as the basis of the calculation of the Washington

Test Year tax provision, and the interest deduction to that amount was taken as the cost of long-term and short-term debt multiplied by the proportion of rate base supported by the debt components. Additionally, an allocation of permanent tax differences and federal tax credits were included in the provisional calculation, as well as ongoing EDIT amortization.

Line 12 details the system and Washington expenses for property taxes during the Test Year. The Washington amount reflects the direct assignment of property taxes incurred.

Other Taxes on line 13 include franchise taxes, utility tax, and WUTC regulatory fee, which are assigned directly to each jurisdiction. Payroll Taxes are allocated using a payroll factor generated in the O&M expense allocation model that reflects the weighted average of all other cost allocations as they were used for accounts containing payroll expense. Miscellaneous other taxes are almost all directly assigned.

Q. What are the primary differences between income tax expense calculated using only the federal statutory rate of 21 percent and the income tax expense included in the Test Year results?

A. The primary differences result from historical regulatory income tax flow-through items related primarily to tax benefits that were originally flowed through to customers prior to 1981 and the regulatory benefits of EDIT amortization that were established as a result of federal tax reform in 2017.

Q. What are the historical regulatory income tax flow-through items?

A. The historical regulatory flow-through items relate to accelerated income tax depreciation benefits that occurred prior to 1981 and plant removal costs for income

tax. The amortization of these items is included as previously authorized in Docket UG-080546, Order 04, paragraph 16. The amortization is anticipated to conclude in calendar year 2027, and RY1 has been adjusted for the end of this amortization.

Q. What are the regulatory benefits of EDIT, associated with 2017 federal income tax reform, that are included in income tax expense?

A. In Order 06, page 27, paragraph 72 of Docket UG-181053, the Commission concluded that NW Natural's Plant EDIT balance for Washington customers was $14.592 million. This balance began to amortize for the benefit of customers as a reduction of income tax expense at an annual rate of $400 thousand as of November 1, 2019.

The Plant EDIT amortization benefits continue to be provided to customers subject to the timing limitations of the average rate assumption method (ARAM). The Plant EDIT amortization for the benefit of customers as a reduction of income tax expense beginning November 1, 2021, and through the Test Year was $375 thousand annually.

Q. Please explain depreciation and amortization expense and rate base on page 1 of Exh. KTW-3.

A. Depreciation and Amortization on line 14 can be explained in conjunction with the determination of system and Washington Total Rate Base on line 17, which are detailed on pages 6 and 7 of Exh. KTW-3. The allocation methodology of gross plant in rate base applies consistently to the allocation of depreciation and amortization expense and accumulated depreciation in rate base. As with O&M expense, the use of direct assignment is the default approach, and is applicable to the allocation of production, non-storage transmission, and distribution plant. Intangible plant, namely computer

software, is allocated using all customers due to its service to customers generally. Storage and storage transmission plant is allocated on the basis of firm volumes, insofar as it is considered a substitute to pipeline capacity. Compressed Natural Gas and Liquefied Natural Gas refueling facilities (non-storage) are allocated using the 3-factor approach, due to their contribution to various Company activities. General plant is allocated using a 3-factor approach.

The other elements of rate base are 1) cushion gas in storage which, following the storage plant, is allocated on firm volumes; 2) customer advances, which are directly assigned; 3) unamortized, or net, leasehold improvements, which have been allocated on a 3-factor approach for improvements in the Company's 250 Taylor operations center, microwave communication towers and the Company's backup data center; and 4) deferred taxes, which are directly assigned in the case of state deferred taxes and allocated on the basis of percentage of total accumulated depreciation for federal deferred taxes, after grossing up for the effect of state deferred taxes on the federal amount.

Q. Please explain lines 18 and 19 on page 1 of Exh. KTW-3.

A. For system results in column (a) and Washington-specific results in column (b), line 18 represents the overall ROR using the Net Operating Revenue on line 16 divided by the Total Rate Base on line 17. Line 19 is the resulting ROE when the debt cost components of the capital structure are removed from the overall return.

Q. Please describe the allocation methodology used to arrive at the Washington Test Year results summarized in Exh. KTW-3.

A. NW Natural's state allocation methodology for ratemaking has been consistently applied in all Washington and Oregon general rate cases since its original implementation in 2000. The Company's method of allocating costs begins with an initial identification of direct costs, with a direct assignment of those costs to the appropriate jurisdiction. The remaining costs are then considered with respect to specific "drivers," or elements such as volumes or customers that have a causative effect on costs. If a cost is related to a particular driver, it is allocated on that basis. Lastly, if there is a common cost with a mix of drivers, it is allocated on the basis of a multi-part allocation factor, called 3-factor. This 3-factor allocation is composed of the average of 1) the proportion of one jurisdiction's directly assigned gross plant to the system total, 2) the proportion of one jurisdiction's number of customers to the system total, and 3) the proportion of employees directly assigned to the system total.

There are 24 primary allocation factors available for use in assigning O&M expense, as shown on page 4 of Exh. KTW-3[21]. Even though the number is somewhat high when considering the desired simplicity of a method, a review of the nature of the factors shows that most are just refinements of the drivers typically relied on, namely volumes and customers.

System and jurisdictional O&M as shown on pages 2 and 3 of Exh. KTW-3 indicates the total amounts of O&M expense allocated to each state, and the overall

[21] For calculations of allocation factors, see electronic versions of Exh. KTW-3.

percentage of O&M expense allocated to Washington of 10.37 percent. These total O&M expense amounts include uncollectible expense, so when returning to the results of operations on page 1, lines 6 and 7 represent a breakout of the total O&M expense.

VI. TEST YEAR RESTATING ADJUSTMENTS

Q. What is the purpose of this section of your testimony?

A. In this section, I describe the restating adjustments the Company has made to the Test Year results to annualize changes that occurred during the period that are known and measurable. In addition, restating adjustments weather normalize Test Year results. I will refer to Exh. KTW-4, which I have prepared for the explanation of the restating adjustments.

Q. Please describe Exh. KTW-4.

A. Page 1, columns (a) through (k) of Exh. KTW-4 show the individual restating adjustments to Test Year results. Total restating adjustments to Test Year results are in column (l). Page 2 of Exh. KTW-4 displays the federal income tax calculation for each individual restating adjustment in a matching columnar format to page 1.

Q. Please describe the adjustments shown in column (a) on page 1 of Exh. KTW-4.

A. Column (a) on page 1 adjusts the Company's revenues and gas costs for the following items: 1) residential and small commercial usage is normalized to reflect normal weather; 2) usage for industrial and large commercial customers is annualized; 3) delivered volumes are priced to reflect permanent rates currently effective in Washington (Docket UG-200994, effective November 1, 2021 and Docket UG-210974, effective November 1, 2023), and 4) the cost of gas expense is adjusted to reflect the gas costs currently embedded in rates.

Q. Please explain why the normalized volumes are then priced at rates currently effective in Washington.

A. Pricing of the volumes at current rates is done to eliminate the effects of temporary increments in rates and to present revenues and costs at rates which are currently in effect. Due to rates changing during the course of the Test Year, re-pricing is necessary to accurately reflect current rate levels and gas costs for calculating the revenue requirement for RY1.

Q. Please describe how this re-pricing is achieved.

A. The pricing is accomplished by multiplying normalized volumes by the currently effective Washington rates for base, commodity, and pipeline capacity tariff rates. This is performed for all volumes and rates by each individual rate schedule.

Distribution capacity charges and sales service storage charges for large volume non-residential sales and transportation customers are calculated by multiplying the applicable current Maximum Daily Delivery Volume (MDDV) by the currently effective rates for each month of the Test Year.

Customer charges (the fixed portion of a customer's bill) are calculated by multiplying the number of customers by the applicable tariff customer charge. This is performed for all customers and monthly charges by each individual rate schedule. This calculation is performed for each month of the Test Year, and the annual total is added to the result of the normalized volumes pricing to derive the total normalized revenue reflecting current rates.

Q. How are industrial and large commercial customer revenues incorporated into the Test Year?

A. The volumes used for the industrial and large commercial customers for the restating adjustment are the actual volumes consumed during the 12-months ended March 31, 2025.

Q. Please explain how the cost of gas was calculated for the Test Year.

A. The total cost of gas is on page 3 of Exh. KTW-4. Cost of gas for NW Natural can be segmented into demand costs and commodity costs. Demand costs reflect relatively fixed monthly charges that are incurred for pipeline transportation service from domestic and Canadian pipelines. Commodity costs reflect expenses for obtaining physical gas. Each year the Company submits for approval its PGA filing that revises billing rates to include pricing for demand and commodity costs for the upcoming year. The ability to adjust prices on an annual basis for prevailing pricing of gas costs allows for the exclusion of the gas cost pricing issue from general rate cases.

Gas costs were developed using the gas cost rate elements included in the current tariff billing rates for sales rate schedules. This ensures an appropriate level of gas cost in relation to the Test Year normalized revenues.

In summary, pricing normalized volumes at current revenue rates adjusted to exclude temporary increments, and calculating costs built from the gas cost increments that are currently incorporated into those revenue rates, ensure that a precise matching of revenues and gas costs is achieved in the adjustment.

Q. Please explain the other restating adjustments on page 1 of Exh. KTW-4.

A. The adjustment in column (b) serves to set many of the miscellaneous revenue amounts to a three-year average for actual results, using a 12-month ending March time period, to partially remove any anomalies for the items during the Test Year. If the three-year history for an item shows a trend up or down, the most recent year is used as the normal amount. Page 4 of Exh. KTW-4 provides support for the adjustment in column (b).

Column (c) serves to replace the property taxes expenses during the Test Year with the cash amount most recently paid. Page 5 of Exh. KTW-4 provides support for the adjustment in column (c).

Column (d) adjusts uncollectible expenses to reflect the average of the 12-months ended March 31, 2025, March 31, 2024, and March 31, 2023, of actual net write-off percentages. Page 6 of Exh. KTW-4 provides support for the adjustment in column (d).

Column (e) is an adjustment to rate base for working capital, which generates a return on investments in working storage gas inventory and other critical assets necessary to perform the utility function. The Company has continued use of the settled working capital model from its previous general rate proceeding, Docket UG-200994. Page 7 of Exh. KTW-4 displays the adjustment in column (e).

Column (f) adjusts O&M to reflect removal of promotional advertising expenses, the long-term portion of the Company's executive compensation program, and the first year of rate case expenses for regulatory purposes. Furthermore, an increase to full-time employees ("FTEs") to represent the end of the Test Year is also

included. Page 8 of Exh. KTW-4 provides support for the adjustment in column (f), as does the Direct Testimony of Mr. Davilla in Exh. TFD-1CT.

Column (g) adjusts O&M and rate base to include actual ordinary claims for the Test Year, replacing the expense accrual activity that is used for claims reserve accounting. The adjustment also serves to include a three-year average of extraordinary claims. The use of the three-year average is meant to normalize the expense, which corrects for year-to-year anomalies in expense levels. Page 9 of Exh. KTW-4 provides support for the adjustment in column (g).

Column (h) adjusts Environmental Cost Recovery Mechanism (ECRM) expense to remove the expense from the revenue requirement calculation. The ECRM is recovered through a temporary rate for which the revenues associated are removed through the weather normalization adjustment. Page 10 of Exh. KTW-4 provides support for the adjustment in column (h).

Column (i) adjusts depreciation expense and rate base for end of period valuation. The March 2025 depreciation expense amount was multiplied by twelve to annualize the depreciation expense level observed in the last month of the Test Year. The rate base adjustment is the difference between the 13-month average of monthly averages (AMA) and the March 31, 2025, ending period balance. Pages 11 and 12 of Exh. KTW-4 provide support for the adjustment in column (i).

Column (j) adjusts the payroll tax associated with full-time employees (FTEs) at the end of the Test Year. Page 8 of Exh. KTW-4 provides support for the adjustment in column (j).

Column (k) adjusts the Test Year expenses for employee bonuses. The amount accrued during the year is removed and replaced by the three-year average of amounts paid. Page 8 of Exh. KTW-4 provides support for the adjustment in column (k).

Column (l) provides a subtotal of the effects of all the restating adjustments.

VII. ADJUSTED TEST YEAR RESULTS

Q. What is the total effect of the above Test Year restating adjustments on the Company's actual results of operations for the Test Year?

A. Exh. KTW-5 presents the Company's results of operations for the Test Year (column (a)), the resulting restating adjustments described in the previous section (column (b)), and the results for the Test Year normalized and adjusted at present rates (column (c)).

Q. What is the Test Year rate of return and return on common equity after the restating adjustments?

A. Column (c) of Exh. KTW-5, line 17, shows the Company's rate of return of 3.35 percent. Line 18 shows 1.81 percent for the return on common equity (ROE), which is significantly lower than the proposed ROE of 10.1 percent as presented by Ms. Nelson in Exh. JEN-1T.

VIII. TEST YEAR PRO FORMA ADJUSTMENTS

Q. What is the purpose of this section of your testimony?

A. In this section, I describe the pro forma adjustments the Company has made to the Test Year results to include capital, revenues and expenses that will be used and useful or known prior to RY1. I will refer to Exh. KTW-6, which I have prepared for the explanation of the pro forma adjustments.

Q. Please explain each adjustment on page 1 of Exh. KTW-6.

A. Column (m) adjusts revenue to include forecasted customer additions and the revenue they will generate. Pages 2 of Exh. KTW-6 provides support for the adjustment in column (m).

Column (n) adjusts depreciation expenses to an end-of-period annualized amount as of July 31, 2026. The forecasted depreciation expense level for July 2026 was multiplied by twelve for the end of period annualized amount. Page 3 of Exh. KTW-6 provides support for the adjustment in column (n).

Column (o) adjusts utility plant in service and accumulated depreciation for capital that is estimated to be used and useful by the effective date of RY1 (August 1, 2026), but were not complete at the end of the Test Year. Net book value is used for the adjustment at the rate effective date of RY1 and reflects July 31, 2026, balances. Page 4 of Exh. KTW-6 provides support for the adjustment in column (o).

Column (p) adjusts O&M expense that increases between the end of the Test Year and the start of RY1. For more detail, see Mr. Davilla's Direct Testimony, Exh. TFD-1CT. Page 5 of Exh. KTW-6 provides support for the adjustment in column (p).

Column (q) adjusts property tax based on increases in net plant during the pro forma period. Property tax forecasts are derived from an historical four-year relationship between net plant and property taxes paid. Page 5 of Exh. KTW-6 provides support for the adjustment in column (q).

Column (r) adjusts for the inclusion of Mist Recall that is expected to be filed coincident with the 2025-26 PGA. Due to Mist Recall not being included within the Test Year, a pro forma adjustment is needed to ensure the amounts are included in rate

base for RY1. The recall occurred in June 2025. Page 6 of Exh. KTW-6 provides support for the adjustment in Column (r).

Column (s) adjusts O&M and rate base for savings associated with two contract FTE's that will be eliminated due to the Resource Scheduling Optimization Project, as described in Mr. Fellon's Direct Testimony, Exh. BEF-1CT. Page 7 of Exh. KTW-6 and the details further below in my testimony provide support for the adjustment in Column (s).

Column (t) adjusts payroll expense to include the wages for employees given the known and measurable increases that have occurred and will occur due to Consumer Price Index adjustments, bargaining unit contract terms, and step progressions for employees. Pages 5 of Exh. KTW-6 provide support for the adjustment in column (t).

Column (u) provides a subtotal of the effects of all the Test Year pro forma adjustments. Page 8 of Exh. KTW-6 demonstrates the tax effects of the pro forma adjustments.

IX. MULTI-YEAR PROVISIONAL ADJUSTMENTS

Q. What is the purpose of this section of your testimony?

A. In this section, I describe the multi-year provisional adjustments the Company has made for RY1, RY2, and RY3 that will be subject to refund prior to the Pro Forma and Provisional Plant Report review outlined earlier in this testimony. These adjustments include capital, revenue, and expenses that will be used and useful or known within 12 months of each of the rate year's rate effective date. I will refer to Exh. KTW-7, Exh. KTW-8, and Exh. KTW-9, which I have prepared for the explanation of the adjustments.

Q. Please summarize the provisional capital for each of the three rate years.

A. Provisional capital additions represent short-lived assets, programmatic, projected, or large and distinct projects that are included in the Direct Testimony of Mr. Moncayo (Exh. JOM-IT), Mr. Fellon (Exh. BEF-1CT and Exh. BEF-23HCT), Mr. Kizer and Mr. Johnson (Exh. DBK-SSJ-1T), Mr. Pipes (Exh. WKP-1T), Mr. Karney (Exh. JSK-1T), Ms. Braun (Exh. HJB-1CT), and in my testimony (Exh. KTW-1T). Please see Table 4 above, which summarizes pro forma and provisional capital by sponsoring witness.

Q. Do any of the provisional adjustments have offsetting benefits that are included?

A. Yes. Many offsetting benefits have been included within the revenue requirements calculation. A list and description of the offsetting factors below:

- Customer growth revenues are included with current rates for RY1, RY1 rates for RY2, and RY2 rates for RY3, which directly offsets the revenue requirement for those years;
- Direct O&M savings identified;
- Retirements of certain assets have been forecasted based on historical trends which reduces depreciation expense through a reduction of gross plant;
- Accumulated depreciation continues to build every month of the rate year reducing the return on rate base. RY1 uses end of period July 31, 2026, prior to the rate effective date;
- Accumulated deferred income taxes offset rate base, which also reduces the return on rate base;

- Contributions in aid of construction, which represents the amounts new customers pay to help with the cost of construction for connecting to the system, offsets rate base;
- Customer deposits, which are sometimes required for new customers, also reduce rate base; and
- Excess deferred income tax amortization reduces the income taxes owed.

A summary of the offsets for each rate year are included in Table 4, above.

A. RY1 Provisional Adjustments

Q. Please explain the provisional adjustments in Exh. KTW-7.

A. Page 1 of Exh. KTW-7 summarizes the provisional adjustments of revenue, O&M expense, tax expense, and payroll tax expense for RY1.

On page 1, column (v), of Exh. KTW-7, revenues have been updated with forecasted customer additions at current rates. Support for this adjustment can be found on page 2 of KTW-7.

Column (w) of Exh. KTW-7, page 1, represents the O&M adjustment which is related to incremental expense as discussed in Mr. Davilla's Direct Testimony, Exh. TFD-1CT. Support for this adjustment can be found in Exh. KTW-7, page 3.

Column (x) of Exh. KTW-7, page 1, adjusts tax expense, which is associated with an increase in the EDIT credit of $25 thousand per year for a total of $400 thousand. In addition, interest expense associated with the cost of capital, which is deducted from taxable income, is adjusted to reflect a deduction in forecasted interest expense in RY1.

Column (y) adjusts payroll taxes to reflect increased FTEs, CPI adjustments to wages and salaries, and income changes for our bargaining unit employees. Exh. KTW-7, page 3 shows support for this adjustment.

Q. Where are the tax effects shown for the RY1 provisional adjustments?

A. Tax effects are shown on Exh. KTW-7, page 4, for each provisional adjustment.

Q. What is the proposed revenue requirement for RY1?

A. As shown on Exh. KTW-7, page 5, column (g), line 4 proposes a revenue requirement of $137.6 million, or an incremental amount of revenue requirement of $25,557,744, as shown in column (f), line 1. The proposed revenue requirement is based on an ROR on line 17 of column (g) of 7.51 percent and an ROE on line 18 of 10.10 percent. The cost of capital components can be seen in Exh. KTW-7, page 6.

B. RY2 Provisional Adjustments

Q. Please explain the provisional adjustments in Exh. KTW-8.

A. Page 1 of Exh. KTW-8 summarizes the provisional adjustments of revenue, O&M expenses, property tax, depreciation expense, rate base, tax expense, thermal energy network project, and payroll tax expense for RY2.

On page 1, column (a), of Exh. KTW-8, revenues have been updated with forecasted customer additions at RY1 rates. Support for this adjustment can be found on page 2 of Exh. KTW-8.

Column (b) of Exh. KTW-8, page 1, represents the O&M adjustment which is related to incremental expense as discussed in Mr. Davilla's Direct Testimony, Exh. TFD-1CT. Support for this adjustment can be found in Exh. KTW-8, page 3.

Column (c) of Exh. KTW-8, page 1, adjusts property tax to reflect the increase in rate base from the amounts included in RY1. Support for this adjustment can be found in Exh. KTW-8, page 3.

Column (d) of Exh. KTW-8, page 1, adjusts the provisional depreciation expense, which represents expense for the 12 months of RY2. Support for this adjustment can be found in Exh. KTW-8, page 3.

Column (e) of Exh. KTW-8, page 1, adjusts for capital additions on a 13-month AMA basis for rate base. Support for this adjustment can be found in Exh. KTW-8, page 3.

Column (f) of Exh. KTW-8, page 1, represents interest expense associated with the change in cost of capital, which is deducted from taxable income reflecting an increase in forecasted interest expense in RY2.

Column (g) of Exh. KTW-8, page 1, includes the addition of a thermal energy network project that will begin to be recovered in RY2. Support for this adjustment can be found in Exh. KTW-8, page 4.

Column (h) adjusts payroll taxes to reflect increased FTEs, CPI adjustments to wages and salaries, and income changes for our bargaining unit employees. Exh. KTW-8, page 3, shows support for this adjustment.

The overall provisional adjustments for RY2 can be seen in Exh. KTW-8, page 1, column (i).

Q. Where are the tax effects shown for the RY2 provisional adjustments?

A. Tax effects are shown on Exh. KTW-8, page 5, for each provisional adjustment.

Q. What is the proposed revenue requirement for RY2?

A. As shown on Exh. KTW-8, page 6, column (k), line 4 proposes a revenue requirement of $147.0 million, or an incremental amount of revenue requirement of $8,591,015, as shown in column (j), line 1. The proposed revenue requirement is based on an ROR on line 17 of column (g) of 7.62 percent and an ROE on line 18 of 10.20 percent. The cost of capital components can be seen in Exh. KTW-8, page 7.

C. RY3 Provisional Adjustments

Q. Please explain the provisional adjustments in Exh. KTW-9.

A. Page 1 of Exh. KTW-9 summarizes the provisional adjustments of revenue, O&M expenses, property tax, depreciation expense, rate base, tax expense, thermal energy network project, and payroll tax expense for RY3.

On page 1, column (a), of Exh. KTW-9, revenues have been updated with forecasted customer additions at RY2 rates. Support for this adjustment can be found on page 2 of Exh. KTW-9.

Column (b) of Exh. KTW-9, page 1, represents the O&M adjustment, which is related to incremental expense as discussed in Mr. Davilla's testimony, Exh. TFD-1CT. Support for this adjustment can be found in Exh. KTW-9, page 3.

Column (c) of Exh. KTW-9, page 1, adjusts property tax to reflect the increase in rate base from the amounts included in RY2. Support for this adjustment can be found in Exh. KTW-9, page 3.

Column (d) of Exh. KTW-9, page 1, adjusts the provisional depreciation expense which represents expense for the 12 months of RY3. Furthermore, starting at the rate effective date of RY3, the adjustment includes the implementation of the

proposed depreciation study, as sponsored by Mr. Spanos in Exh. JJS-1T. Support for this adjustment can be found in Exh. KTW-9, page 3.

Column (e) of Exh. KTW-9, page 1, adjusts for capital additions on a 13-month AMA basis for rate base. Support for this adjustment can be found in Exh. KTW-9, page 3.

Column (f) of Exh. KTW-9, page 1, represents interest expense associated with the change in cost of capital, which is deducted from taxable income reflecting an increase in forecasted interest expense in RY3.

Column (g) of Exh. KTW-9, page 1, includes a full year of thermal energy network project expenses and rate base, reflecting that it will begin to be recovered in RY2. Support for this adjustment can be found in Exh. KTW-9, page 4.

Column (h) adjusts payroll taxes to reflect increased FTEs, CPI adjustments to wages and salaries ,and income changes for our bargaining unit employees. Exh. KTW-9, page 3 shows support for this adjustment.

The overall provisional adjustments for RY3 can be seen in Exh. KTW-9, page 1, column (i).

Q. Where are the tax effects shown for the RY3 provisional adjustments?

A. Tax effects are shown on Exh. KTW-9, page 5 for each provisional adjustment.

Q. What is the proposed revenue requirement for RY3?

A. As shown on Exh. KTW-9, page 6, column (o), line 4 proposes a revenue requirement of $156.4 million, or an incremental amount of revenue requirement of $8,268,473, as shown in column (n), line 1. The proposed revenue requirement is based on an ROR

on line 17 of column (g) of 7.66 percent and an ROE on line 18 of 10.20 percent. The cost of capital components can be seen in Exh. KTW-9, page 7.

X. TSA SECURITY DIRECTIVE 2 DEFERRAL AMORTIZATION

Q. Did the Company file an accounting petition for the TSA Security Directive 2 described in Exh. BEF-23HCT?

A. Yes. The Company filed a deferral application for the TSA Security Directive 2 on November 17, 2021, which was later docketed as UG-210900. The deferral incorporated start-up O&M costs and ongoing total cost of service, not just operations and maintenance costs. The Commission approved the petition in Order 01 on February 9, 2023.

Q. What is the Company's proposal for amortization?

A. The Company proposes to amortize the start-up O&M costs in a separate temporary adjustment schedule over a three-year period, beginning in RY1. For the cost-of-service deferral, we propose to amortize in a separate temporary rate adjustment schedule over a five-year period beginning in RY3. Both schedules will amortize to all customers on an equal percent of margin basis. Please see Schedule 237 and Schedule 239 for the proposed O&M start-up costs and cost of service deferral, respectively.

Q. Will the Company update Schedule 237 with known costs for the compliance filings to this case?

A. Yes. The Company will update the proposed tariffs to incorporate the June 2026 cost of service balance for the O&M start-up costs, currently estimated at $570 thousand, for the RY1 effective date and each June 30th balance for the remainder of the MYRP.

For the cost-of-service amortization, the Company will incorporate the June 2028 balance to be amortized over a five-year period. The estimated June 2026 balance is $3.2 million.

XI. COVID-19 DEFERRAL AMORTIZATION

Q. Please describe the COVID-19 deferral.

A. The Company filed an accounting petition on March 25, 2020, to defer costs associated with the COVID-19 pandemic for later ratemaking. The Commission issued Order 01 in Docket UG-200264 approving the petition subject to conditions.

Q. What conditions were included in the order?

A. The Commission required NW Natural to reduce its deferral by the amount of reconnection and late payment fee charges actually collected by the Company from January 1 to March 25, 2020, to coincide with the beginning of the deferral period. The Company was also ordered to track and defer operational savings.

Q. What is the Company's COVID-19 deferral balance to be amortized?

A. After the conditions ordered by the Commission were implemented, the Company's COVID-19 deferral balance as of March 31, 2025, per its 2025 1st Quarter COVID-19 Deferred Accounting Report filed in Docket UG-200264, is $1.4 million.

Q. What is the Company's proposal for the COVID-19 deferral amortization?

A. The Company proposes to amortize the balance as of June 30, 2026, to all customers on an equal percent of margin basis over a three-year period. The amortization will occur through a temporary Adjustment Schedule 235 as provided with the other tariffs in this case.

XII. METER MODERNIZATION DEFERRAL AMORTIZATION

Q. Has the Company filed an accounting petition for the Meter Modernization Program?

A. Yes. The Company filed a deferral application on January 4, 2024, which was docketed as UG-240012. The Commission approved the petition in Order 01 on February 22, 2024.

Q. What is the Company's specific proposal regarding the Meter Modernization Program deferral amortization?

A. The Company proposes that the Commission authorize amortization of the June 30, 2026 deferral balance to be amortized to all rate schedules over three years starting August 1, 2026, on an equal percent of margin basis. If the deferral balance continues to increase after June 2026 or June 2027, the additional amount will be amortized over two years from RY2's compliance filing or over one year from RY3's compliance filing. For information about the Meter Modernization Program, please see Mr. Karney's Direct Testimony (Exh. JSK-1T).

Q. What is the estimated deferral balance as of June 30, 2026?

A. The estimated deferral balance as of June 30, 2026, is $548 thousand.

Q. Has the Company proposed a tariff to amortize these costs?

A. Yes. The Company has proposed a tariff (Schedule 236) to incorporate an estimate of the deferred amounts as of June 30, 2026. The Company will update the tariff with known costs as of June 30, 2026, in the compliance filing of this case.

XIII. BASE RATE PROVISIONAL ADJUSTMENT RIDER

Q. What is NW Natural proposing for its base rate provisional adjustment rider?

A. The Company proposes that all provisional capital that is subject to refund be tracked and accounted for on a separate base rate adjustment, Schedule 238, as provided with the tariffs in this case.

Q. What is the purpose of this rider?

A. The rider serves as a cap for base rate amounts that are subject to refund that have the ability to be approved through the Provisional Plant Report. Approved amounts would only occur if capital is placed in service according to the MYRP as described in my testimony above.

Q. What is the procedure for modifying this adjustment schedule when the Commission authorizes provisional capital that was previously subject to refund?

A. Upon the Commission's approval of provisional capital previously designated as subject to refund, the related calculated amounts will be shifted from this schedule to base rates within the relevant rate schedules. If the Company no longer has any provisional capital subject to refund, the per therm amounts for this base rate provisional rider will be set to zero.

Q. What is the process for modifying this adjustment schedule if the Commission were to disallow provisional capital?

A. If the Commission were to determine that provisional capital subject to refund should be disallowed, the Company would calculate the revenue collected from the rate effective date onward and defer these amounts until the earlier of the next rate effective

date of the MYRP or coincident with the PGA. The deferred amounts would then be returned to customers as credits, allocated in accordance with the approved MYRP.

XIV. REVENUE REQUIREMENTS CONCLUSION

Q. Please summarize the results of your analysis and proposed revenue increases for your three-year MYRP.

A. The revenue increase required to allow the Company its requested ROE of 10.1 percent, 10.2 percent, and 10.2 percent for RY1 is $25,557,744, RY2 is $8,591,015, and RY3 is $8,268,473 as shown in column (f), (j) and (n) of Exh. KTW-2, respectively. Columns (e), (i), and (m) represent the normalized and adjusted results for the Company at current rates. The Company's adjusted results including the proposed rate increases are included in in columns (g), (k), and (o) for the three rate years.

Q. Does this conclude your Direct Testimony?

A. Yes.

Table of Contents

I. Introduction and Summary 2

II. Proposed Measures 3

III. List of Exhibits 11

I. INTRODUCTION AND SUMMARY

Q. Please state your name and position at Northwest Natural Gas Company ("NW Natural" or "the Company").

A. My name is Natasha C. Siores. My title is Senior Manager, Regulatory Affairs.

Q. Please describe your education and employment background.

A. I earned my Bachelor of Science degree in Commerce (Accountancy honors program) from DePaul University in Chicago and am an Illinois Registered Certified Public Accountant.

My utility work experience includes more than 16 years with NW Natural and then more than 5 years with PacifiCorp. At NW Natural, I worked on regulatory compliance, regulatory policy strategy, revenue requirement, regulatory mechanisms, regulatory accounting and reporting, and development of rate filings. At PacifiCorp, I worked on revenue requirement, state regulatory proceedings, and regulatory affairs. I previously have testified in proceedings before the Public Utility Commission of Oregon and the Washington Utilities and Transportation Commission ("Commission" or "WUTC").

In my current position at NW Natural, my primary responsibilities include oversight of regulatory compliance and regulatory filings, coordination of the Company's participation in regulatory policy proceedings in its state jurisdictions, management of the Company's tariffs, administration of the Company's regulatory compliance system, and oversight of energy equity and affordability strategy.

Q. Please summarize the purpose of your testimony.

A. The purpose of my testimony is to provide the proposed performance measures that NW Natural proposes to track and report as required by RCW.80.28.425(7).

II. PROPOSED MEASURES

Q. Please explain the need for performance measures.

A. As briefly discussed in the Direct Testimony of Kyle T. Walker (Exh. KTW-1T), the applicable rules regarding multi-year rate plans require that the Commission determine a set of performance measures that will be used to assess a utility operating under a multi-year rate plan.[1]

Q. Please describe the performance measures NW Natural is proposing.

A. Consistent with the guidance in the Commission's Proceeding to Develop a Policy Statement Addressing Alternatives to Traditional Cost of Service Rate Making, docketed as U-210590, NW Natural's proposed performance measures reflect three strategic goals that align with NW Natural's business principles: ensuring a resilient, reliable, and customer-focused distribution grid; promoting customer affordability; and advancing equity in utility operations. Specifically, NW Natural proposes to track and report the performance measures listed below. The performance metric areas and goals listed in the first column largely reflect the framework used in the U-210590 docket.

[1] RCW. 80.28.425(7).

Table 1- Proposed Performance Measures

Commission-Ordered Multi-Year Rate Plan Metrics	
Area	**Measure**
Operational Efficiency	Operations and maintenance expense divided by operating revenue
Operational Efficiency	Operating revenue divided by AMA total rate base and Operating revenue divided by EOP total rate base
Operational Efficiency	Current assets divided by current liabilities
Earnings	Net income divided by operating revenue
Earnings	Retained earnings divided by total equity
Affordability	Average annual bill impacts
Energy Burden	Average annual bill divided by median income by census tract
Commission Initial Reported Performance Metrics	
Goal	**Measure**
Resilient, reliable, and customer-focused distribution system	**Emergency response time**: Average and median length (in minutes) from customer call to arrival of field tech in response to emergency, separately reported for Named and Non-named Communities.
Customer Affordability	**Arrearages:** Number of customers in arrears by period and total amount of arrearages by month, by class, measured by census tract to include 30+, 60+, and 90+ days in arrears.
Customer Affordability	**Energy burden:** Annual residential bill divided by area median income by census tract for all customers, comparing outcomes in Named and Non-named Communities. The number and percentage of customers experiencing high energy burden by census tract.
Customer Affordability	**Utility assistance program effectiveness:** On an annual basis, utility customer-funded assistance funds dispersed divided by total available customer-funded assistance received, as well as the percentage of estimated low-income needs met with dispersed funds.

Commission Initial Reported Performance Metrics	
Goal	**Measure**
Customer Affordability	**Customer participation in assistance programs:** The number and percentage of estimated low-income customers who participate in one or more customer-funded energy assistance programs that actively lowers energy burden, both aggregated and by census tract; and separately the number and percentage of estimated low-income population enrolled in a utility bill discount program and total amount of discount applied annually.
Customer Affordability	**Annual utility revenues and rate impacts:** Annual revenue from base rates approved in most recent MYRP by customer class; Total incremental or decremental revenue from all approved rate adjustments, excluding those authorized by the MYRP, occurring during the reporting year separated by schedule and customer class providing the calendar month and percentage of the change for each schedule; Net bill revenue (annual) by schedule.

Q. How did NW Natural decide on these performance measures?

A. These performance measures largely reflect those described and recommended in the Commission's Policy Statement in docket U-210590.[2]

Q. Were there measures from the Policy Statement that are not included in NW Natural's proposal?

A. Yes, NW Natural has not included measures for workforce diversity or supplier diversity. NW Natural has policies promoting workforce diversity and supplier diversity, and the Company tracks our progress for these measures. NW Natural provides insights on these metrics through a publicly available document, NW Natural

[2] *In the Matter of the Proceeding to Develop a Policy Statement Addressing Alternatives to Traditional Cost of Service Rate Making,* Docket U-210590, Policy Statement Addressing Initial Reported Performance Metrics (Aug. 2, 2024).

Holding Company's Community and Sustainability Report, included as Exh. NCS-2.[3] NW Natural strives to be an employer of choice to effectively compete for a talented workforce and to be a thoughtful and informed purchasing partner. The Company is proud of its current results in these areas, as reported in its Community and Sustainability Report, which provides examples and illustrates how NW Natural strives to advance diversity of its employees and suppliers. For example, NW Natural publishes data on the race, ethnicity, and gender of our employee base and board of directors.[4] Additionally, NW Natural provides information about the number of goods and services purchased from culturally or racially diverse-, woman-, or veteran-owned businesses.[5] However, NW Natural has concerns with including these measures. First, while I am not a lawyer, my understanding of RCW 80.28.425(7) is that it did not enumerate workforce and supplier diversity as a performance measure, incentive, or penalty for the Commission to consider. While the statute does not limit the Commission to consider only the enumerated measures, NW Natural is concerned how its internal workforce and supplier diversity practices will be used by the Commission as a means to "assess a utility operating under a multi-year rate plan" as contemplated in the Commission's Policy Statement. This concern is amplified when or if these performance measures evolve into performance *incentive* measures establishing incentives or penalties based on the diversity of our workforce and suppliers, as has

[3] NW Natural Holding Company's Community and Sustainability Report is available at this link: https://s23.q4cdn.com/611156738/files/doc_downloads/2024/12/20/ESG_2023_Report_Combined_fnl_b.pdf.

[4] Exh. NCS-2 at 50.

[5] Exh. NCS-2 at 52.

been contemplated in the U-210590 policy docket. For these reasons, NW Natural does not propose the workforce and supplier diversity measures from the Policy Statement.

Q. Are there aspects of the performance measures that are important to highlight?

A. Yes. While the description and calculation of the measures are intuitive to understand, NW Natural would like to highlight the disparity that gas utilities face in defining "Named Communities." The Commission provided guidance in its Policy Statement that "…Named Communities shall include both Highly Impacted Communities and Vulnerable Populations as defined in the Clean Energy Transformation Act (CETA) of 2019."[6]

Q. How will the Company determine Highly Impacted Communities for use in its performance metrics?

A. Highly Impacted Communities have been defined by CETA as "…a community designated by the department of health based on cumulative impact analyses in RCW 19.405.140 or a community located in census tracts that are fully or partially on "Indian country" as defined in 18 U.S.C Sec. 1151."[7] NW Natural understands that the Washington Department of Health has provided a health disparities map for electric utilities in the State to identify the highly impacted communities in their service territories. The map even includes a drop-down list for the utilities to filter the census

[6] *In the Matter of the Proceeding to Develop a Policy Statement Addressing Alternatives to Traditional Cost of Service Rate Making,* Docket U-210590, Policy Statement Addressing Initial Reported Performance Metrics, at para. 13 (Aug. 2, 2024).

[7] RCW 19.405.020(22).

tracts applicable to their service territory.[8] NW Natural notes that such assistance for this data does not exist for gas utilities. For purposes of determining highly impacted communities for NW Natural's performance measures, the Company is using those census tracts located in the counties of the service territory that the Department of Health's health disparities map and data indicate are highly impacted communities.

Q. How will the Company determine Vulnerable Populations for use in its performance metrics?

A. The term Vulnerable Populations is defined by CETA as those "communities that experience a disproportionate cumulative risk from environmental burdens due to: a) adverse socioeconomic factors, including unemployment, high housing and transportation costs relative to income, access to food and health care, and linguistic isolation; and b) sensitivity factors, such as low birth weight and higher rates of hospitalization."[9] For purposes of determining Vulnerable Populations for its performance measures, NW Natural is using those census tracts that were identified as being a disadvantaged community in the Energy Burden Assessment ("EBA") that was completed for the Company by Empower Dataworks in 2024. The EBA identified disadvantaged communities by using the disadvantaged community flag in the U.S. Environmental Protection Agency's ("EPA") environmental justice screen ("EJ Screen") dataset, which was the EPA's screening and mapping tool that utilized national datasets for environmental and socioeconomic indicators.

[8] See Washington Environmental Health Disparities Map | Washington State Department of Health last accessed July 27, 2025. A map filtered on the counties in the Company's service territory is included as Exh. NCS-3.

[9] RCW 19.405.020(39).

Q. Please summarize what the Company is proposing to use for Named Communities.

A. NW Natural proposes to use Named Communities in compliance with the Commission's policy statement, which includes both Highly Impacted Communities and Vulnerable Populations. As explained above, for Highly Impacted Communities, NW Natural will include those census tracts located in the counties of the service territory that the Department of Health's health disparities map indicated as highly impacted. Also, for Vulnerable Populations, the Company will include those census tracts identified in its 2024 EBA as being a disadvantaged community. The table below summarizes these census tracts. The shaded census tracts indicate those that are common between Vulnerable Populations and Highly Impacted Communities.

NW Natural Named Communities Census Tracts	
Vulnerable Populations (EBA EJ Screen)	**Highly Impacted (WA Dept of Health)**
53011040706	53011040507
53011041005	53011040509
53011041010	53011040808
53011041104	53011041009
53011041108	53011041010
53011041111	53011041104
53011041313	53011041112
53011041600	53011041201
53011041700	53011041205
53011041800	53011041318
53011042300	53011041320
53011042400	53011041323
53011042700	53011041332
53039950200	53011041333
	53011042000
	53011043100

Q. Are there additional factors in determining the performance measures the Company is considering?

A. Yes. On May 5, 2025, notice was provided that the Commission commenced Phase 2 of the U-210590 policy docket. The Phase 2 work plan released by the Commission will include opportunities for comments and workshops establishing principles and expectations for performance incentive mechanisms. NW Natural has already actively participated in this policy docket and will continue to do so. As the Company learns more about how the reporting performance metrics are being discussed, calculated and used by utilities, stakeholders and the Commission, NW Natural will inform its own calculations and considerations of performance measures and may adjust those proposed in this docket accordingly.

Q. How will NW Natural report these performance measures?

A. As indicated in the Commission's policy statement, if approved, these performance measures will be reported as an appendix to NW Natural's annual Commission Basis Report.

Q. Does this conclude your Direct Testimony?

A. Yes, it does.

2023 Community and Sustainability Report

NW Natural HOLDINGS™

Leading with integrity.
Caring for people.
Innovating for the future.

TABLE OF CONTENTS

This report describes our progress on significant areas undertaken by our business including sustainability, community, governance issues, and includes disclosures from the SASB framework. It is divided into the following sections:

About NW Natural Holdings

NW Natural

- Safety & Reliability
- Environmental Stewardship
- Customers & Community
- People & Culture

NW Natural Water

NW Natural Renewables

Governance

Appendix

- 2023 Sustainability Accounting Standards Board (SASB)
- 2023 NW Natural Workforce Statistics
- 2023 American Gas Association (AGA) Voluntary Reporting Tool
- 2023 NW Natural Environmental Data
- 2023 Additional Statistics
- 2023 Environmental Memberships & Associations

Forward-Looking Statements

To Our Stakeholders

NW Natural Holdings CEO David H. Anderson at Portland Headquarters.

Recently, we celebrated our 165th anniversary. Since our founding in 1859 and our very first days as a gas light company that illuminated the streets of Portland, Oregon, we have continued to hold to our Pacific Northwest ethos of respecting the beauty of our region, supporting its dynamic and diverse economy, and helping the communities we serve grow and thrive.

Every year, we work toward lower-carbon and renewable energy solutions for the benefit of our customers and our shared environment. In 2023, NW Natural began operation of its second renewable natural gas (RNG) facility under the landmark Oregon Senate Bill 98, and NW Natural Renewables completed construction on two RNG facilities. We continued to explore hydrogen technology and performed a successful 20% hydrogen blend test at our Sherwood, Oregon utility operations and training center. We believe NW Natural Holdings has an important role to play in a sustainable energy future, and we are continuing our education, innovation, and efforts related to energy efficiency to serve our communities.

Safety is our greatest responsibility, and in 2023 we had one of the lowest numbers of workplace injuries in nearly two decades. As we grow, we consistently look for ways to increase the safety of our employees and customers. For example, NW Natural Water completed a major upgrade to our Sunriver Water Wastewater Treatment Plant, now allowing the utility to treat an average of 1.5 million gallons of water each day and bringing the water quality of the plant to the Oregon Department of Environmental Quality's highest standard.

I am so proud of the work we did to support our customers, communities, and employees. Our Community and Equity Advisory Group worked with and learned from community organizations to further our efforts to make energy equitable and accessible to everyone we serve. Because of our employees' service ethic, our gas utility was ranked second in the West for large utilities by J.D. Power's Gas Utility Residential Customer Satisfaction Study for the 20th time. Integrity is our foundation, and it informs how we serve our customers, operate our business, treat our colleagues, and engage with the community. I am particularly proud that, for the third year in a row, we were recognized as one of the World's Most Ethical Companies® by Ethisphere early in 2024.

These successes would not be possible without the hard work and passion of our 1,400 employees who embody the core values of NW Natural Holdings every day. Our 2023 Community & Sustainability Report is a celebration of successes across NW Natural Holdings. Our future is bright, and I am eager to see each business lead with integrity and caring while serving our customers and communities far into the future.

David H. Anderson
NW Natural Holdings CEO

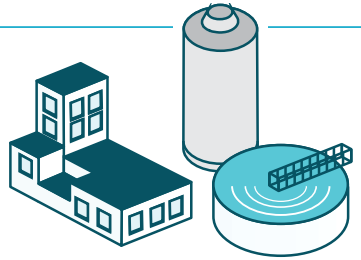
Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

About NW Natural Holdings

NW Natural Holdings, based in Portland, Oregon, owns NW Natural Gas Company, NW Natural Water Company, NW Natural Renewables Holdings and other business interests. In 2023 we entered a new stage of growth, continuing our commitment to environmental stewardship efforts and delivering essential energy and services safely and reliably with great care.

OVER 165 YEARS

doing business as a respected energy provider in the Pacific Northwest



MORE THAN 180,000

people in the Pacific Northwest, Arizona, and Texas depend on us for clean, safe water, and we provide wastewater utility services to approximately 20,000 connections

APPROXIMATELY 2 MILLION PEOPLE

in more than 140 communities depend on us to deliver the energy and essential services they need to heat their homes, cook their meals and keep their businesses running

800,000 METERS

providing energy in Oregon and Southwest Washington

1,400 EMPLOYEES

serving customers safely and reliably every day

KEY INITIATIVES

Pursuing a renewable, **carbon-neutral future** for our gas utility

Expanding and investing in our **water and wastewater** utility business

Investing in **renewable energy** and the transition to a decarbonized future for a variety of sectors

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Our Mission

We provide safe, reliable, and affordable utility services and renewable energy in a sustainable way to better the lives of the communities we serve.

Our Vision

Lead in service excellence, innovation and environmental stewardship by harnessing our passion for customers.

Our Values

Since 1859, NW Natural Holdings has been a respected energy provider in the Pacific Northwest. We have maintained this reputation by keeping our five core values at the center of everything we do.

INTEGRITY

We will display integrity in everything we do by being honest, ethical and true to our word. We will always choose to do the right thing, even when it is the harder path.

SAFETY

Safety is paramount in all aspects of our operations, infrastructure and workplaces. We are committed to superior training and protective, healthy work practices to ensure we all return home safely. We strive to educate our employees, partners, customers, and our communities about safety.

CARING

We are committed to respecting and caring about each other. We value teamwork, collaboration, and strong individual contributions. We believe a diverse, equitable and inclusive culture, and involvement in the communities we serve, is essential to our collective success.

SERVICE ETHIC

We are driven by a desire to serve our customers and each other and go the extra mile to solve problems. We take pride in our service excellence.

ENVIRONMENTAL STEWARDSHIP

We are committed to a decarbonized and more sustainable future through energy efficiency, water conservation, and expanding the supply of renewable resources we provide.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

2023 Highlights & Awards

2ND
renewable natural gas facility began operations

CONTINUED
to operate one of the tightest, most up-to-date systems in the nation

3RD
year in a row of one of the lowest numbers of workplace injuries in nearly two decades

#2
in the West ranking by residential customers in J.D. Power survey for 20 years running

$1.0M
contributed to nonprofit organizations

89%
of surveyed employees are proud to work for NW Natural

HIGHEST
board gender diversity recognition from 50/50 Women on Boards

4
water and wastewater utilities acquired

ENTERED
the water operations and maintenance services business

2
renewable natural gas facilities constructed for competitive RNG business

2023 WORLD'S MOST ETHICAL COMPANIES® ETHISPHERE 2-TIME HONOREE

Ethisphere® Institute's 2022 and 2023 World's Most Ethical Companies®

2023 MOST TRUSTED UTILITY BRAND escalent RESIDENTIAL CUSTOMERS

2023 Escalent Most Trusted Utility Brand

50/50 WOMEN ON BOARDS

50/50 Women on Boards – Highest distinction for Gender Balanced board

J.D. POWER

TOP 2 IN THE WEST
in residential customer satisfaction

NW Natural HOLDINGS™

NW Natural®

Safety & Reliability

Safe, reliable delivery of natural gas is our greatest responsibility to our customers, employees, and the communities we serve. Safety guides everything we do.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Safety Highlights

ZERO

reportable information security breaches

Continued to achieve a low damage rate with the lowest rate in our history in 2023

2023 FEDERAL REPORTS

ZERO

- Reportable pipeline incidents
- Corrective action orders
- Notices of probable violation

OUR MODERN SYSTEM

- No known cast iron pipes since 2000, no known bare steel pipes since 2015
- Leading the industry with one of the lowest ratios of leaks per 100 miles of pipeline in 2023

ONE OF THE LOWEST ANNUAL NUMBER OF WORKPLACE INJURIES SINCE 2004

NEARLY 75% OF TRANSMISSION PIPELINE INSPECTED

- 2.5 times the rate required by regulations
- 88% of inspections performed through inline assessment

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural®

Our Tight, Modern System

In the mid-1980s, we worked with our public utility commissions in Oregon and Washington state to proactively create a pipeline replacement program. In 2000 we became one of the first companies in the country to eliminate known cast iron pipes, and by 2015 we replaced all known cast iron and bare steel pipe. We believe we are the first pure-play local distribution company to completely remove these legacy pipelines. That legacy continues—NW Natural had one of the lowest ratios of leaks per mile of distribution pipe in 2023 among U.S. natural gas utilities.[1]

We work to vigilantly manage our assets, which include about 700 miles of transmission pipelines and approximately 14,300 miles of distribution pipeline. Our asset management processes include:

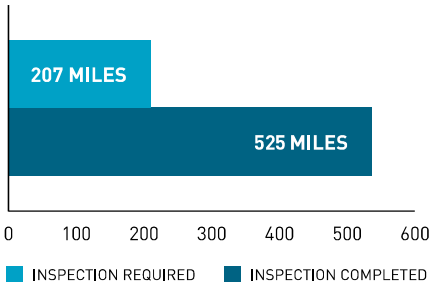
- Comprehensive training for operations employees
- Proactive monitoring, preventative maintenance, corrective and accelerated actions
- Regular asset monitoring and auditing
- Risk assessments
- Systems and processes to help us promptly identify and repair potential issues

In 2023, we performed safety inspections on our transmission system at about 2.5 times the rate required by federal and state regulations.

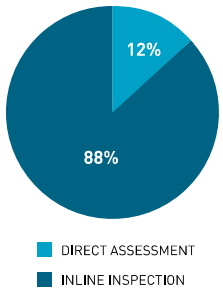
We inspect our transmission system with a combination of direct assessments and technologically advanced inline inspection. At the end of 2023, we had inspected nearly 75% of our transmission system, primarily through inline inspection—a superior method, as it can assess pipeline integrity from inside the pipe.

NW Natural consistently leads the industry in one of the lowest number of leaks per mile of distribution pipeline. We plan to perform a leak survey of each gas distribution main at least every five years and survey 20% of mains every year. We also work to perform leakage and atmospheric corrosion surveys every three years on residential service lines. In 2023, we expanded our classification of business districts, raising the bar on the federal requirement to perform these inspections annually. We use Supervisory Control and Data Acquisition (SCADA) and telemetry to monitor the system in real time and transmit data from remote sources. This powerful technology makes it possible to quickly identify operational issues, even in remote locations.

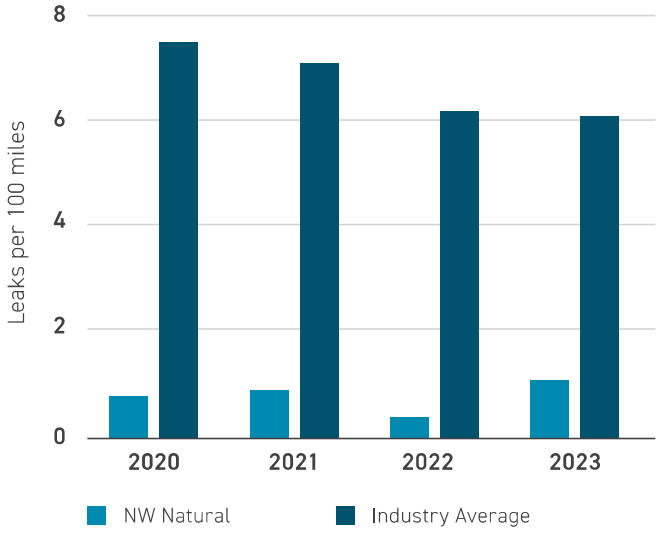
Inspected More Miles Than Required



Used Most Modern Inspection Approach Majority of Time



Leading the Industry with Low Number of Leaks[1]



[1] Based on Annual DOT Report Data for natural gas operators reporting more than 7,000 miles of distribution main.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

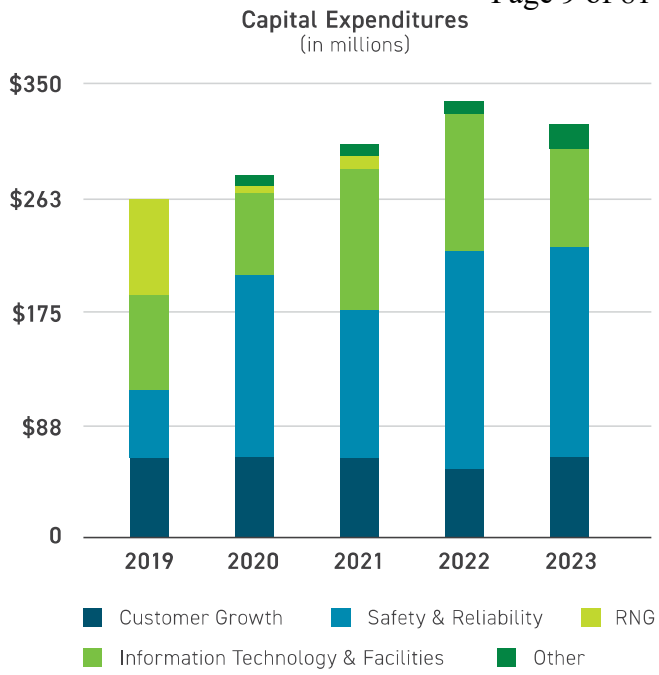
Investing in Safety Improvements

We're continually investing in the safety and reliability of our natural gas infrastructure. In 2023, NW Natural invested more than $315 million[2] to complete a range of projects to support safety, reliability, growth, and investments in technology. Those investments included system reinforcement projects, maintaining our valuable storage facilities, renovations at several of our service centers including seismic upgrades, and critical upgrades related to information technology to ensure we can continue serving our customers well into the future.

Damage Prevention

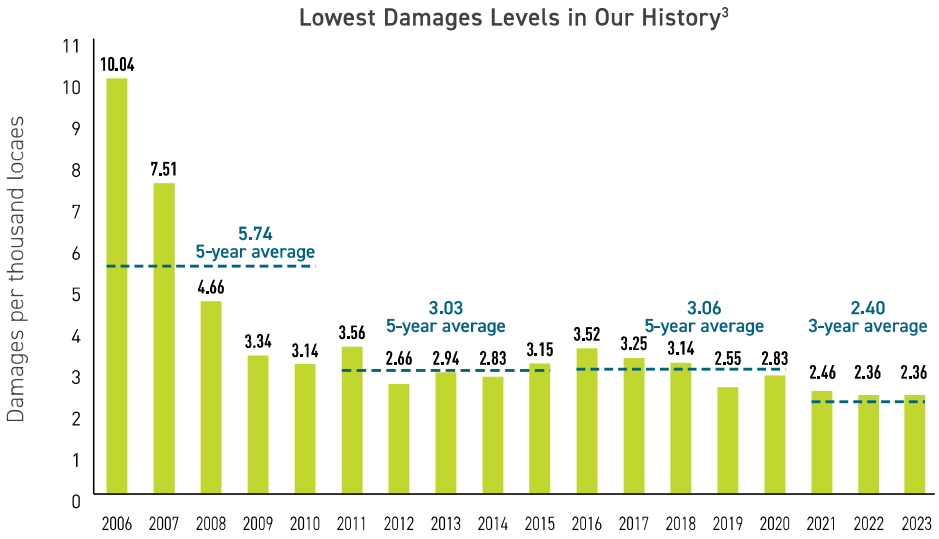
Digging by third-party contractors is the biggest cause of damages to NW Natural pipelines. Preventing these damages protects public safety, prevents interruptions in gas service and helps reduce pipeline emissions. NW Natural began comprehensive efforts to address this issue in 2006, working with our state regulators to implement more rigorous dig laws, and providing training and intervention to help contractors excavate safely. Since then, damages due to digging have declined by over 75%.

In 2023, we focused on reducing damages related to insufficient one-call notification practices, where excavation happens without proper locates for utility lines. We proactively communicated with and educated excavators on the locate request process, as well as created a field-accessible reporting procedure to alert damage prevention specialists to potential issues. The average damages related to insufficient one-call notification practices from 2018-2022 dropped by about 20% in 2023.



[2] Cap-ex is on an accrual basis and includes cloud-based software.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.



[3] DOT, 2023.

In 2023, NW Natural once again had a historically low damage rate, tying our achievement in 2022.

We continued to maintain our lowest annual damage rate in 2023 as we refined our risk-based locate response program. State-of-the-art technology makes it possible to evaluate every locate request to identify the riskiest excavations. This data-driven approach helps us understand where the risk of damage is highest so we can effectively prioritize and intervene where necessary.

Our specialists engaged third-party excavators on high-risk interventions by:

- Contacting individual excavators prior to the project start date to discuss the scope of work, dig laws, best practices and the location of NW Natural facilities
- Meeting the excavator on-site to perform jobsite assessments
- Providing a point of contact and support for the excavator on that jobsite and any future jobsites
- Offering trainings tailored to the kind of work each contractor does

We also continued a robust multimedia campaign, in Spanish and English, reminding landscapers, contractors and homeowners how to avoid damaging lines. Excavators or homeowners can call 811 or use the free NW Natural safety app to have utility lines located before digging.

NW Natural is a member of the Common Ground Alliance's Damage Prevention Institute, an association committed to promoting public safety and effective damage prevention practices through partnership and collaboration. The Damage Prevention Institute acquired the Gold Shovel Association in 2023. NW Natural obtained Gold Shovel Certification in 2021 and 2022, a credential recognizing NW Natural's efforts to take specific, comprehensive actions to prevent underground infrastructure damages.

NW Natural recognized for outstanding emergency management in community

In 2023, NW Natural was presented with the Oregon Emergency Management Association's Innovation, Collaboration and Service Award, recognizing outstanding contributions in the field of emergency management. This honor is given annually to an organization that has made a significant contribution to the field of emergency management and to Oregon communities focusing on underserved populations. The honor was bestowed on NW Natural because of our longstanding Get Ready campaign, which since 2012 has worked with and supported local fire departments, law enforcement, first responder agencies, and emergency preparedness organizations. At Get Ready events, we provide critical educational materials on emergency and disaster preparedness. In 2023, we joined with first responder agencies and hosted seven different events attended by more than 5,000 people.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Excess Flow Valves

We are installing excess flow valves (EFVs), which can automatically stop the flow of natural gas to a home or business if the service line is damaged by a seismic disturbance or other catastrophic event. We're installing EFVs on new service lines and planning to retrofit EFVs on existing service lines meeting certain specifications. By the end of 2023, we had installed more than 302,000 EFVs on about 40% of the service lines in our system, which compares to an industry average of 27%.[4]

Taking System Safety to the Next Level

To help prevent safety issues, our employees performed approximately 200,000 proactive field visits in 2023. We operate a 24/7 emergency hotline that enables us to promptly dispatch responders when there's a problem, and our NW Natural safety app connects customers to our 24-hour emergency line with one click. On average, we respond to damage and odor calls across our service territory in about 30 minutes or less.

NW Natural leverages new technologies and best practices to help keep our employees, our system, and the public safe. For example, we're active in the American Gas Association (AGA) Best Practices Program, a voluntary peer review forum for local natural gas utilities across the U.S. to share information on safety and reliability and support safety management efforts at the industry level. In 2023 we were a partner company in the U.S. Environmental Protection Agency's (EPA) Natural Gas STAR Program. The EPA launched the voluntary partnership with natural gas operators in 1993 to achieve important reductions in methane emissions.

Our commitment to safety extends beyond adhering to regulatory mandates. Our Pipeline Safety Management System (PSMS) is not a required program, we do it voluntarily. It provides a holistic framework for our employees to manage risk and promote continuous improvement of safety practices. PSMS engages all employees, from frontline workers to executives, in advancing the program's ultimate goal of reducing pipeline incidents to zero. We've continued to enhance our PSMS program by strengthening NW Natural's existing safety programs and integrating them into our PSMS. We also enhanced our documentation for safety-related processes, as well as increased training using our event-learning program.

[4] Pipeline and Hazardous Materials Safety Administration data for natural gas distribution companies with more than 400,000 service lines.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural®

Reliability & Resilience

Approximately 2 million people depend on us to deliver the energy and essential services they need to heat their homes, cook their meals, and keep their businesses running. NW Natural has developed a risk-based method for determining how to provide this energy to customers without interruption, both now and over the long term, even when demand is at its highest. This is done through a process of evaluating different energy-demand scenarios and resource-acquisition strategies, as outlined in our Integrated Resource Plan (IRP).

We conduct this involved analytical process to help maintain adequate gas supply to meet customer needs every day across the year (energy planning) and during the coldest days we might experience (system capacity planning). To help lower costs for our customers and mitigate the risk of interruptions to our natural gas supply, we:

- Purchase natural gas from geographically varied sources
- Maintain a diversified portfolio of supply contracts
- Own and contract with natural gas storage facilities

Our expertise in resource and energy planning will continue to be essential as we transition to renewable fuels for the pipeline.

NW Natural has abundant storage capacity in or near our service area—a unique and valuable resource for reliable energy delivery.

We expect to meet about 54% of our projected peak day energy requirement with gas from storage in or near our service area. Underground gas stored at our facility near Mist, Oregon holds sufficient capacity to supply natural gas to the Portland metro area for approximately one month during an average winter.

PROVIDING POWER DURING WINTER STORMS AND TIMES OF NEED

Frigid temperatures that hit the Pacific Northwest during the week of January 13-19, 2024 resulted in record-breaking natural gas deliveries on our system. Through careful planning, hard work and dedication, our field crews and operations teams kept the gas flowing safely for about 2 million people in the region, many of whom were without power but could still rely on direct use of natural gas in appliances like gas fireplaces, water heaters, stoves, and generators. On January 13, a record breaking 8 million therms of gas were delivered to homes and businesses, about 100,000 more therms than our last record in December 2022 and double our average daily winter send out. Our system storage facility in Mist, Oregon supported the entire region and hit a new record when it provided 4.5 million therms of gas on January 13. That's equivalent to serving 630,000 residential customers in a day. Meeting the moment in January was a result of disciplined investments in the system over many decades.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Resilient Infrastructure & Operations

Maintaining the resilience of the U.S. energy system is imperative. Compared with above-ground infrastructure, the underground gas delivery system is less vulnerable to disruptive events from extreme weather such as hurricanes and snowstorms. Our modern pipes are also designed to withstand stress from ground movement associated with earthquakes, landslides, and other natural disasters. A study by Portland State University's Center for Public Service suggests the natural gas system can be a crucial resource in the event of a major disaster that disrupts power to the Pacific Northwest.[5]

We take measures so that in the event of a disaster we can continue to operate critical business functions, including gas control and emergency response. We build and upgrade our operations facilities to function in the event of a disaster so we can continue to operate these critical business activities.

- Our Portland headquarters is designed to remain operational after an earthquake. We completed construction of another NW Natural building that is designed to be operational after a large-scale seismic event. New resource centers in Vancouver, Washington and Lincoln City, Oregon are built to Level 4 seismic standards, which apply to structures that are most critical to resilience.
- We continued to upgrade our facilities in 2023 as part of the company's Long-Range Facilities Strategic Plan for building resilient, energy-efficient structures.
- NW Natural uses FEMA's National Incident Management System and Incident Command System (ICS) to manage emergency situations that could disrupt our operations. The ICS is designed to address any hazard, whether it be a natural disaster, a pandemic, a technology issue, a cybersecurity incident, or an event such as major damage caused by third-party excavation.

[5] Portland State University, Renewable/Compressed Natural Gas (R/CNG) for Transportation System Resilience, 2019

Cybersecurity

We prioritize cybersecurity to protect our critical systems and customer data. Our vigorous cybersecurity program continued to be a significant and growing piece of our investment portfolio. About 3% of our total capital expenditures in 2023 were related to cybersecurity and about 19% were information technology (IT) related. We continue to maintain processes and controls guided by the National Institute of Standards and Technology (NIST) Cybersecurity Framework. NW Natural's commitment to cybersecurity encompasses our third-party partners. We manage third-party cybersecurity risks by asking detailed questions, reviewing independent assessments, requiring incident reporting, and ongoing monitoring. In 2023, we were not materially impacted by any information security breach of a third party. Our cybersecurity activities are supported and overseen at the highest levels of the company and the audit committee of our board.

NW Natural had zero known reportable[6] information security breaches in 2023

With significant new investments to enhance cybersecurity protocols, systems, and staff, we continued to incorporate IT best practices in 2023. This included expanding our IT teams, implementing new security processes and products, and onboarding new partners for managed services and 24/7 monitoring and detection.

Cybersecurity highlights for 2023 include:

- Continued to implement our five-year cybersecurity roadmap
- Performed successful penetration tests, threat hunting, tabletop exercises, and other programs
- Launched an incentive-based employee competition that recognizes the team with the strongest performance on phishing tests

[6] For the purposes of this report, reportable information security breaches are those that are required to be reported to the Securities and Exchange Commission or the public generally

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Cybersecurity Strategy & Operations

We continually review and update our cybersecurity strategy to help secure technology systems and support the safe flow of gas to our customers. In 2022 we launched a new Cybersecurity Implementation Plan which defines our cybersecurity strategy from 2022 through 2027. This plan is approved by the Transportation Security Administration for meeting revised federal security directives. It focuses on six key objectives: security governance, cybersecurity risk management, compliance, defensibility, zero-trust architecture, and cloud security. We've got a sharp focus on cybersecurity operations.

- 100% of our active employees participated in information security training that demonstrates how to protect confidential information at work, identify potential cybersecurity risks and take action in case of a suspected information security incident. We also provided focused phishing training, including extra training for groups that face elevated security risks.
- We continued adhering to process controls, performing security assessments, and working toward alignment of our program to the NIST Cybersecurity Framework and other key standards.
- We expanded our detection capabilities.

Key components of our cybersecurity risk management program include:

- Risk assessments designed to help identify cybersecurity risks to our critical systems, information, services, and our broader technology environment
- The use of external service providers with specific expertise, where appropriate, to assess, test or otherwise assist with aspects of our security processes
- Cybersecurity awareness training of our employees, incident response personnel and senior management, as well as periodic experiential learning through "phishing simulations"
- Segmentation of, and back-ups for, certain of our sensitive systems and data
- Third-party cyber risk management process for vendors including, among other things, a security assessment, contracting program, and ongoing monitoring for vendors based on their risk profile
- Physical security around our sensitive infrastructure and cybersystems

Our cybersecurity operations received an excellent rating of 750 in 2023 from BitSight, the world's foremost cybersecurity ratings platform. NW Natural's rating was higher than 65% of our industry peers.

Cybersecurity activities are supported and overseen at the highest levels of the company. Our executive team, with leadership from our vice president and chief information officer, is responsible for implementing the IT and services strategic plan and setting the tone at the top with respect to cybersecurity. Specialists in particular business areas such IT, security, and procurement, apply their specific expertise to the company's strategy. Our audit committee, comprised solely of independent board members, oversees management's strategies, investments and risks related to the company's IT systems, cybersecurity, and compliance. In 2023, the Audit Committee or board was briefed on cybersecurity matters at least four times in formal meetings.

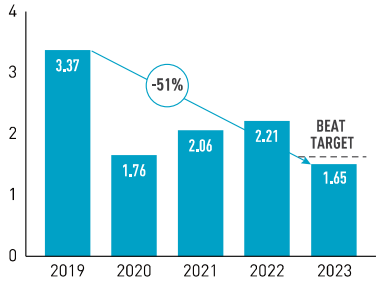
Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Employee Safety

NW Natural is engaged in a companywide initiative to systematically pursue our ultimate goal of eliminating safety incidents. Our Journey to Zero program, launched in 2020, focuses on preventing injuries and building a safety culture based on open communication, collaboration, and a strong service ethic. Each year, we set a target of reducing injuries by 10% over the previous three-year period. Our Journey to Zero on-the-job safety initiative continued to deliver results in its fourth year. The period from 2020 to 2023 marked one of the best safety performances in the last 20 years. Highlights include:

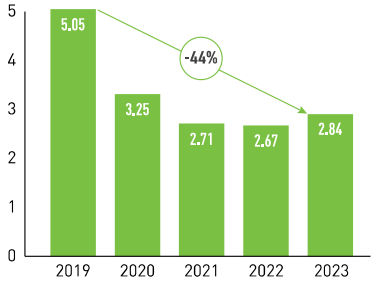
- Recorded a 4% decrease in workplace injuries and a 29% decrease in days away or restricted time rate (DART)
- Increased our near miss frequency/good-catch rate by 15%, which is an improvement of over 100% since we launched Journey to Zero in 2020. The near miss frequency rate is a leading indicator that reflects our expanded focus on proactively addressing safety concerns.
- No OSHA injuries for two months in 2023—one of the best monthly safety performances since we began documenting safety incidents

Days Away or Restricted Time Rate (DART)*



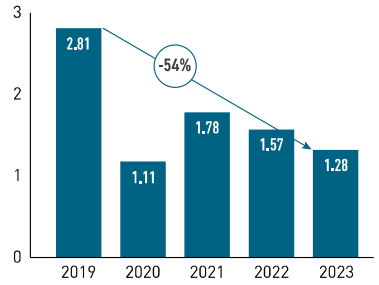
DART = # of incidents with lost time or restricted duty x 200,000 Number of hours worked

Total Recordable Incident Rate (TRIR)*



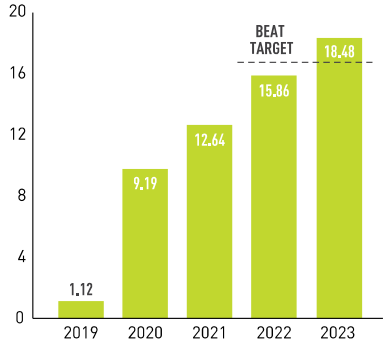
TRIR = # of incidents requiring medical attention x 200,000 Number of hours worked

Lost Time Incident Rate (LTIR)*



LTIR = # of lost time injuries x 200,000 Number of hours worked

Near Miss Frequency Rate/ Good-Catch Rate*



Safety data subject to change past publication date.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Continuing the Journey Toward Safety Excellence

In addition to emphasizing critical on-the-job safety practices, we supported our employees' safety and health, with the following initiatives and programs:

- **Continued our Work Ready program** designed to help employees work and move in safer ways, using the same techniques that keep athletes at peak performance. Work Ready brings a scientific approach to preventing workplace injuries—including strains and sprains, the most common causes of lost work time. The voluntary app-based program is not just for employees out in the field lifting, reaching, climbing, and bending; it's also for employees who are sitting at desks looking at screens. Work Ready is available for employees and their immediate family members.
- **Used our powerful enterprise resource planning technology** that includes new tools to streamline health and safety reporting. The platform allows employees to log incidents, near misses and safety observations in real time from a mobile device, laptop, or desktop computer, and it provides a one-stop shop for analyzing safety submissions and extracting key insights.
- **Focused on preventing Serious Injury and Fatality (SIF) incidents.** NW Natural has maintained a zero SIF rate, with no fatalities for more than a decade. To take SIF prevention a step further, in 2022, we began reviewing all collisions, injuries and near miss/good catch reports to identify potential SIF incidents and evaluate the controls we have in place to prevent serious injuries.
- **Continued to design facilities to promote employee safety.** Beginning with our new Lincoln City Resource Center, our operations, facilities and safety teams use prevention through design principles to eliminate or mitigate safety and ergonomic risks in all newly constructed or remodeled NW Natural facilities.
- **Participating in a nationwide worker-safety study** supported by the National Institute for Occupational Safety and Health. The Total Worker Health research program focuses on reducing and preventing work-related risk factors that have an impact on employees' safety, health, and well-being. In addition to contributing to the research effort, we're getting ideas we can implement to contribute to the excellence of NW Natural's employee safety program.

Safety Management Program

NW Natural's health and safety policies and procedures are designed to comply with all applicable regulations—and we strive to go beyond compliance.

- Strict stop-work policy—when an employee is involved in an accident, they must stop work and a 24/7 nurse care line is available to all employees. We provide alternative working opportunities that allow employees to recover while continuing to contribute.
- Executive compensation on the line—a portion of our executives' compensation is tied to achieving our safety metrics, and our board of directors regularly reviews company safety metrics.
- Safety steering committee is overseen by our executives, as well as a dedicated safety team led by our VP, chief human resources and diversity officer, who reports directly to the CEO.
- Monitor safety performance to help us understand the origins of incidents and develop root-cause trend analysis.
- Work to incorporate industry best practices and benchmarking, including peer analysis and assessments done by the AGA. Our internal auditors periodically review our safety department and health and safety policies. We also conduct third-party assessments to audit aspects of our safety management system.
- Hold contractors accountable—we seek to work with contractors that meet or exceed safety standards and practices for their industries. We use ISNetworld's contractor management services to help us evaluate contractors' safety performance and policies, including criteria such as insurance and drug and alcohol testing standards.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

2023 TRAININGS

34,959
TOTAL PIPELINE SAFETY TRAINING HOURS

1,520
TRAINING HOURS
clocked by employees at our "Training Town" simulated neighborhood

357-member field staff
attended additional quarterly, annual, and scenario-based safety trainings, as well as monthly safety presentations

350 firefighters trained
in emergency procedures involving gas lines

Comprehensive Safety & Technical Training

We maintain an extensive, proactive training program that includes compliance, awareness, emergency preparedness, identifying hazards and handling high-risk situations. Every year operations employees complete classroom instruction and hands-on training at our state-of-the-art Training Town facility, which features a simulated neighborhood complete with functioning underground natural gas lines. We also offer self-paced virtual training through our learning management system (LMS) to keep training current and support our blended learning approach.

NW Natural employees logged nearly 35,000 pipeline safety training hours in 2023, and we also continued to provide training for third parties. We hosted more than 28 immersive safety trainings to prepare 350 firefighters to respond to emergencies that involve or affect the natural gas system.

The technical training department fully leverages NW Natural's LMS to obtain a robust set of data for analyzing the effectiveness of our safety training. The ability to track employee qualifications and automate training requirements helps us ensure regulatory compliance and verify that our field personnel have the knowledge and skills to maintain system safety, identify hazards and safeguard our crews, customers, and communities.

Quality Assurance Program

Quality Assurance (QA) programs for gas distribution utilities are not mandated by federal code, but NW Natural has had a QA program in place since 2006. The QA team follows up on training and inspects work in the field to verify that employees and contractors are working safely and effectively across field operations. In 2023, the team completed nearly 3,000 inspections of work performed by NW Natural employees or contractors. Our quality & qualifications manager reports quarterly results to a QA steering committee that includes leadership from field operations and operations technical services.

Since implementing our QA program, we have seen consistent improvements in work performance, and we have collected data to help us provide timely feedback for employees and improve training, policies, and procedures. Our leading practices in this area have allowed us to serve as a resource for companies looking to implement similar programs.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural®

Environmental Stewardship

NW Natural is committed to environmental stewardship. We believe NW Natural has an important role to play in helping our region move to a lower-carbon, renewable energy future in a more resilient and affordable way.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Our Legacy of Environmental Leadership

2000 REPLACED CAST IRON

Completed replacement of all known cast iron pipe in our system

2002 DECOUPLING

Adopted a rate structure that supports energy conservation

2007 VOLUNTARY CARBON OFFSET PROGRAM

Provided customers with a voluntary program that allows them to offset carbon emissions from their natural gas use

2013 SUSTAINABILITY TEAM CREATED

Employee interest group that promotes continuous improvement of sustainability efforts

2015 REPLACED BARE STEEL

Completed replacement of known bare steel pipe to create one of the nation's lowest-leak distribution systems

2016 ESTABLISHED CARBON SAVINGS GOAL

Established a voluntary carbon savings goal for our operations and customers' emissions from the use of natural gas

2019 OREGON SENATE BILL 98 ESTABLISHED

Oregon passed groundbreaking legislation that supports gas utilities investing in and procuring renewable natural gas and hydrogen for all its customers. Regulators completed rulemaking in 2020.

2021 RELEASED VISION 2050: DESTINATION ZERO REPORT

Analyzes scenarios for carbon neutrality for energy provided

2022 ENVIRONMENTAL CHAMPION

Named 2022 Escalent Environmental Champion[2]

2022 FIRST RNG FACILITY

Commenced operations at our first RNG facility. We believe we are one of the first local gas distribution utilities in the continental U.S. to invest in a renewable natural gas facility on behalf of its customers.

2023 HIGHLIGHTS

- Successfully completed a 20% hydrogen blend pilot[1]
- Unveiled innovative methane pyrolysis technology at NW Natural's Central Portland facility, which produces hydrogen and captures solid carbon[1]

[1] For more information, see "Hydrogen"

[2] Escalent's Environmental Dedication Index score comprises customer ratings of utility actions to build strong environmental stewardship

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural®

The Gas System is a Powerhouse for Delivering Natural Gas Today and Renewables in the Future

Since NW Natural started delivering energy in 1859, the fuel going through our pipes has changed from manufactured gas to natural gas. We're now working toward our next evolution, from natural gas to renewable natural gas (RNG) and hydrogen. We believe natural gas and its delivery system will continue to be needed for a long time.

The Gas System is a Powerhouse for Delivering Natural Gas Today and Renewables in the Future

NW Natural's pipeline system

- Delivers 50% more energy than any other utility in Oregon[3]
- Meets 90% of energy needs for our residential space and water heat customers on the coldest winter days in Portland, Oregon

2x the energy

During winter peak-demand periods, the natural gas system in Portland, Oregon, delivers about twice as much energy as the electric system to residential customers

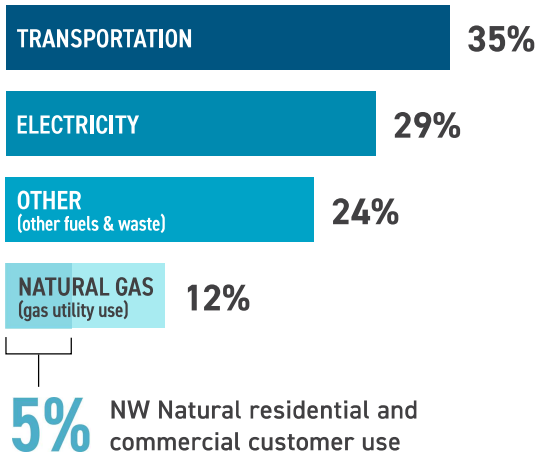
5% of Oregon's emissions

The natural gas our residential and commercial customers use accounts for only **about 5% of Oregon's greenhouse gas (GHG) emissions**[4]

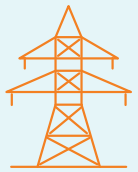
[3] Per data from the Oregon Public Utility Commission, 2022 Oregon Utility Statistics Book

[4] Representative of residential and commercial combustion emissions. State emissions data from the Oregon Department of Environmental Quality Greenhouse Gas Sector-Based Preliminary Inventory 2021

Oregon Greenhouse Gas Emissions by Sector



Source: Oregon DEQ In-Boundary GHG Inventory 2021 preliminary data.



THE ELECTRIC SYSTEM DEPENDS ON NATURAL GAS

Electrical power generation is the largest end-use sector of natural gas in the U.S.[5]

Electric power generators use more natural gas in Oregon than the amount delivered by natural gas utilities to their customers for direct use.[6]

[5] U.S. Energy Information Administration, U.S. Natural Gas Consumption by End Use

[6] 2022 Oregon Public Utility Commission Biannual Report

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

While we know our system is a powerhouse, we also believe we need to transition to renewables. We believe what is needed is a thoughtful and strategic transition that benefits the environment and the communities we serve, but balances our customers' ability to pay for energy necessary to live their lives. To meet the needs of our communities and help our customers reduce their GHG emissions, we believe our region will need an integrated portfolio of diverse lower-carbon energy sources, delivered through pipelines as well as wires. We believe a diversified energy system can be stronger and more affordable—and diversification will be even more important as climate change and severe weather pose new risks to reliability and resiliency.

The natural gas system provides benefits today and can support the future:

- **Continued reliability**: During winter peak-demand periods, the natural gas system in Portland, Oregon delivers about twice as much energy as the electric system to residential customers. The gas system is critical for energy reliability in our region, where the electric grid already faces serious capacity limitations.[7] In the future, a gas system with renewable molecules can complement electric renewables, adding stability to the entire energy system.
- **Ample existing pipeline capacity and affordability**: NW Natural delivers 50% more energy than any other utility in Oregon.[8] To handle that load without the gas system, the electric system would need to increase substantially, requiring intense investment to build new transmission and distribution lines and deploy batteries for storing renewable energy. That would come with a high price tag. Meanwhile, the infrastructure for RNG distribution exists today.
- **Energy system resilience**: The natural gas system's underground infrastructure is less vulnerable than above-ground systems to hurricanes, fires, winter storms, and other extreme weather events.[9]
- **Resiliency for our customers**: Some natural gas appliances and generators can operate in a power outage, providing critical energy resiliency benefits during extreme temperatures.
- **Unmatched storage capacity**: As the world transitions toward decarbonizing its energy systems, long-duration storage of renewable energy will be critical. We envision that in the future, the storage facilities we currently have in place could be used to store RNG or hydrogen. Leveraging these unique assets could have significant benefits for decarbonization strategies across the energy sector. NW Natural's existing storage can hold more than 6 million MWh of energy that can be delivered whenever it's needed.

NW Natural currently has more than 20 billion cubic feet of underground storage—equivalent to the capacity of a battery that would cost more than $2 trillion in today's market.[10]

[7] Northwest Power and Conservation Council, 2019

[8] Oregon Public Utility Commission, 2022 Oregon Utility Statistics Book

[9] American Gas Foundation, Building a Resilient Energy Future: How the Gas System Contributes to US Energy System Resilience, 2021

[10] Prices based on NREL, Cost Projections for Utility-Scale Battery Storage, 2023. Equivalent to more than 6 million megawatt hours of storage. To convert natural gas volumes to MWh for comparison, this figure uses a national average heat content of 1036 btu/cf and a direct energy conversion of 0.29307 MWh/MMBtu.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Our Vision

We believe NW Natural has a pivotal role to play in helping our region move to a lower-carbon, renewable energy future in a more resilient, efficient, and affordable way.

Lower-Carbon Pathway

In 2016 we established NW Natural's Lower-Carbon Pathway as a cornerstone of the company's strategic plan, setting a voluntary initiative of 30% carbon savings by 2035.[11] This is a unique and aggressive target because it includes emissions from our customers' use of our product as well as emissions from our own operations. With the right policy support, we could see success far into the future. In 2023, we remained ahead of target pace for meeting this goal by taking the following steps: lowering energy use through increased efficiency and decreased consumption; providing customers with a voluntary carbon offset program; working to procure natural gas with lower carbon intensity; and evolving our supply to include renewables.

2023: Ahead of Target Savings Rate

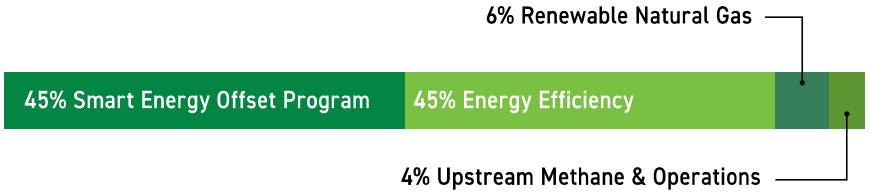
604,848 metric tons of carbon dioxide equivalent saved.

This marks 47% of savings toward goal, ahead of target pace.

2023 savings equal to removing nearly 144,000 cars from the road for one year (EPA GHG equivalencies calculator).

[11] Based on 2015 emission levels attributable to NW Natural operations and customer use of our product.

2023 Source of Savings Mix



Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Energy Efficiency

From conservation to energy efficiency improvements, reduced energy use currently accounts for the second largest savings toward our Lower-Carbon Pathway, and we're working hard to increase that savings in the coming years.

Through Energy Trust of Oregon, we've supported energy-efficiency measures such as cost-effective equipment upgrades, insulation, and building improvements that last for many years. In 2023, NW Natural customers provided funding that covered over $41.1 million of energy-efficiency expenses and generated more than 5.8 million therms in energy savings. Since 2016, we have saved approximately 257,000 metric tons of CO_2e related to efficiency measures.

	Energy-Efficiency Expenses (in millions)	Therms of Energy Savings (in million of therms)	Equivalent Cars Removed from Roads
2022	$35.2	5.6	6,500
2021	$34.5	6.5	7,500
2020	$28.8	6.8	7,800

For two decades NW Natural's rate structure has been based on decoupling, which is intended to break the link between a utility's revenues and the quantity of gas used by its customers, removing financial incentives a utility might have to discourage customers from conserving energy. In 2023 more than 77% of our gas utility revenues were decoupled.

Reducing Supply Chain Emissions

NW Natural works to reduce emissions throughout the supply chain.

- NW Natural developed and implemented an emissions-screening tool that allows us to understand the carbon intensity of gas supplies and consider environmental impact when we evaluate supply purchases (alongside other key purchasing criteria such as price, creditworthiness, and geographic diversity). Through this analysis we can award contracts to lower-emitting producers. Our program helped us procure natural gas with 10% lower emissions associated with upstream production.
- By targeting gas purchases from more environmentally conscious producers, in 2023 we avoided more than 19,800 dekatherms of methane emissions for a year-over-year savings of more than 19,000 metric tons of CO_2e.
- We use alternative blowdown practices that reduce emissions from pipeline venting. In 2023, we avoided releasing over 3,800 metric tons of CO_2e from our 72 field gas operation procedures, reducing the amount these blowdowns would have vented into the atmosphere by 90%.
- We work with like-minded industry members and trade groups to encourage producers to adopt best practices (see Environmental Memberships & Associations in Appendix).

Smart Energy Program—Empowering Customers to Offset Emissions

We believe NW Natural was one of the first stand-alone gas utilities in the U.S. to offer customers a voluntary program that allows them to offset carbon emissions from their natural gas use. Launched in 2007, our Smart Energy program purchases third-party verified carbon offsets from projects that reduce or prevent the release of GHGs. These projects include biodigesters on family-owned dairy farms and RNG projects.

Smart Energy participation increased almost 10% in 2023, and now more than 12% of our residential customers are enrolled in the program. In 2023, the program addressed over 271,000 metric tons of CO_2 emissions, making it the largest contributor to the Lower-Carbon Pathway. Since its inception, the Smart Energy program has addressed more than 1.7 million metric tons CO_2.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Vision 2050: Destination Zero

As we make progress on our Lower-Carbon Pathway, we are evolving our thinking on what's possible for our system and what's best for our customers. We are assessing new ways we can work toward evolving into a lower-carbon gas utility, including enhanced energy efficiency, new technologies, lower carbon fuels such as RNG and hydrogen, and more.

Our vision is focused on collective actions toward:

- Further reducing energy use through intensive energy-efficiency measures and new technologies
- Leveraging our tight pipeline system and long-duration storage to enable a faster, resilient, cost-effective energy transition
- Looking to emerging opportunities to help our company and customers reduce GHG emissions, including possible carbon capture, utilization, and sequestration that can align with our skills and services
- Facilitating adoption of policies that use joint gas and electric system planning and encourage the development of renewables for the pipeline

RNG for the Pipeline

Leveraging our existing natural gas system in new ways is our priority and displacing natural gas with increasing amounts of renewable energy is central to our vision. NW Natural is already procuring supplies of RNG[12], which is derived from biogas and produced from decomposing organic waste from landfills, agricultural waste and wastewater from treatment facilities, that has been captured and cleaned for the pipeline.

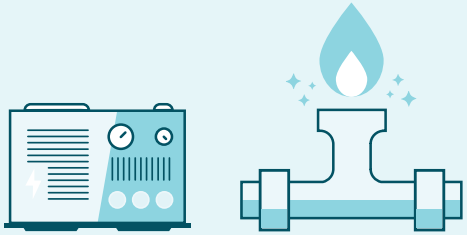
As a renewable fuel that can directly replace conventional natural gas, RNG provides a reliable solution that exists right now and works with the infrastructure we already have.

[12] In 2023, under OR-SB98, the total volume of RNG received by NW Natural in M-RETS was 680,698 Dths, which represents .91% of the Oregon sales load delivered to retail customers.

Our vision of carbon neutrality

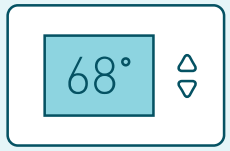
RENEWABLE ENERGY*

Renewable sources that do not contribute new carbon to the atmosphere



COORDINATED ENERGY SYSTEMS

Partnership with cleaner electric systems to create seasonal and peak energy storage



ENERGY EFFICIENCY

Encouraging end-use innovation for deep efficiency

*From a lifecycle emissions accounting perspective

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

RNG is already in use at major facilities like WM[13] and the Port of Seattle, which cut net emissions by 46% in a single year by switching to RNG.[14] There are over 885 RNG facilities online or under construction in the U.S. today. Denmark, a leader in the production of biogas in Europe, increased the proportion of biogas injected into its system to almost 40% of total demand during 2023, and the country reports it is on track to meet 75% of its gas demand from RNG by 2030 and 100% by 2034.[15]

Public Policy Support – The effort to reduce emissions from the gas grid has depended on public policy that supports the development and delivery of renewable power sources. We actively advocate for thoughtful design of regulatory programs in Oregon and Washington state. We are excited about early steps such as Oregon Senate Bill 98 and Washington House Bill 1257, which create a pathway for RNG.

In Oregon, Senate Bill 98 allows gas utilities to procure RNG, and eventually renewable hydrogen, for customers. The law outlines voluntary goals for adding as much as 30% RNG into the pipeline system by 2050 and allows gas utilities to use up to 5% of their revenue requirement to cover the incremental cost. We have exclusive rights to purchase or develop RNG totaling 2% of our current annual sales volumes in Oregon.[16] Washington state passed House Bill 1257 in 2019, which also supports renewable energy procurement and investment by natural gas utilities.

Oregon Senate Bill 98 supports volumetric RNG targets

2025	2030	2035	2040	2045
10%	15%	20%	25%	30%

Our RNG Projects – We believe NW Natural was one of the first movers in the market for RNG. As a result, we've been positioning ourselves to play a key role in the market as it develops. Our team continues to establish relationships with RNG producers, developers, and feedstock owners. In 2022, our first biogas facility began flowing RNG to heat homes and businesses. We believe NW Natural was one of the first local gas distribution utilities in the continental U.S. to invest in and own an RNG facility on behalf of its customers.

- **Anew Climate:** NW Natural is purchasing the environmental attributes, or Renewable Thermal Certificates (RTC)s,[17] generated by landfills, foodwaste, and manure facilities throughout the country.
- **Archaea Energy:** Through a long-term agreement with Archaea Energy Marketing LLC, NW Natural is purchasing RTCs generated by landfills throughout the country.
- **BP Products North America:** NW Natural is purchasing RTCs generated by a facility in the Western U.S. that produces RNG from organic waste, which includes food scraps, liquid waste, and manufacturing food waste.
- **Tyson Foods:** Our first investment under SB 98 supported the development of a facility in Lexington, Nebraska that is converting methane from a Tyson Foods processing plant into RNG. In April 2023, a second RNG facility at a Tyson Foods processing plant in Dakota City, Nebraska was commissioned.
- **Metropolitan Wastewater Management Commission:** In 2021, the MWMC treatment plant in Eugene became the first public agency in Oregon to produce RNG. Nearly all the biogas from the facility's anaerobic digesters that stabilize and treat solids is "scrubbed" and then injected into NW Natural's system.

[13] WM's Renewable Energy Investments Expected to Power over 1 Million Homes by 2026, 2022

[14] Pacific Maritime Magazine, Carbon Emissions Down 46% at Seattle's Port-Owned Facilities, Operations, 2022

[15] Energinet Denmark

[16] In 2023, under OR-SB98, the total volume of RNG received by NW Natural in M-RETS was 680,698 Dths, which represents .91% of the Oregon sales load delivered to retail customers.

[17] Under Oregon law, NW Natural is able to develop RNG projects and either transport the RNG directly to our customers or sell it and detach the environmental attributes to be used for our customers' benefit.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

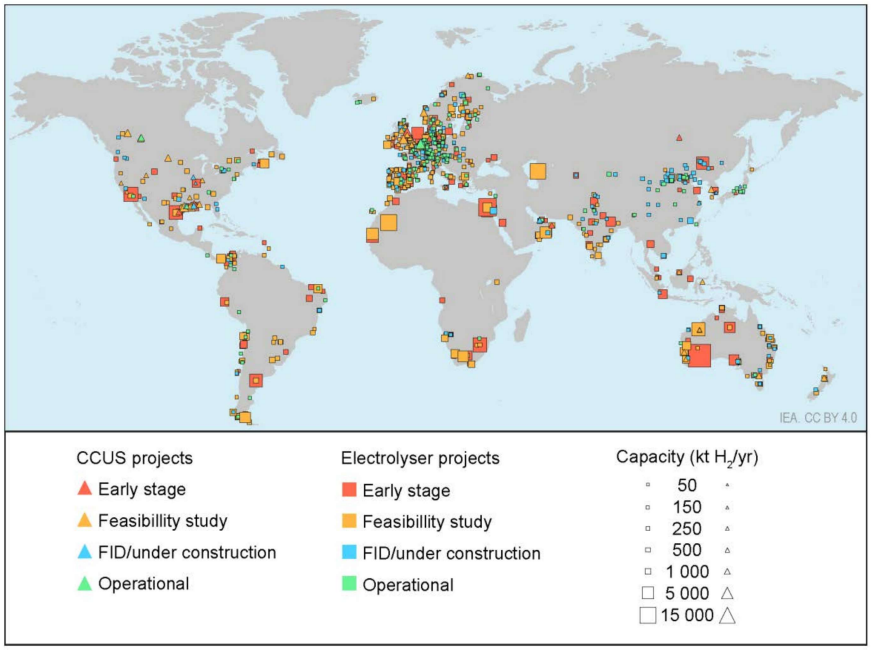
NW Natural advanced the company's RNG strategy on multiple fronts in 2023:

- Began operation of our second RNG facility with Tyson Foods under the landmark Oregon Senate Bill 98
- Issued a request for proposals (RFP) for RNG resources, which attracted a robust volume of bids
- Generated nearly 40,000 metric tons of CO_2 emissions savings. Since 2021, we have saved more than 53,000 metric tons of net CO_2 by using RNG.[18]

Hydrogen

Hydrogen is a key part of moving toward a lower-carbon future. It's a versatile fuel at the point of use and can be blended with natural gas in existing NW Natural pipelines to help decarbonize the gas system. Hydrogen equipment can also be paired with carbon capture and sequestration.

Map of announced low-emission hydrogen production projects



Note: Map includes also announced projects starting after 2030.
Source: IEA Hydrogen Projects database.

Our Hydrogen Pilot Projects – After several years of initial testing, in 2023, we stepped up our hydrogen blending efforts to 20% to heat NW Natural's resource center and training facility in Sherwood, Oregon. We also tested the 20% blend on end-use equipment like furnaces, fireplaces, and water heaters. Additionally, we use the facility as an educational opportunity and invite stakeholders, policymakers, and other parties to learn more about hydrogen innovation.

The Netherlands, United Kingdom, and Germany have been testing 20% hydrogen blending for some time. In the U.S., Hawai'i Gas has been using up to 15% hydrogen in its distribution system since the 1970s, and gas utilities have more than three dozen hydrogen projects planned or underway nationwide.[19]

NW Natural is working with technical partners to determine how to convert our large industrial customers from natural gas to pure hydrogen made on-site. In 2022 NW Natural formed a partnership with Seattle-based Modern Hydrogen to generate hydrogen on-site at our facilities. Modern Hydrogen's groundbreaking technology is designed to strip the carbon from natural gas and turns the decarbonized gas into hydrogen at the point of use, without the need for new infrastructure or storage. This process is designed to produce hydrogen and solid carbon as outputs, and the carbon can be sequestered or used to make products such as asphalt, construction materials, automobile tires, and soil amendments. Unlike other hydrogen production methods, Modern Hydrogen's technology requires no electricity or catalysts for the methane pyrolysis process. Generating the hydrogen on-site reduces supply-chain risk and eliminates costly hydrogen fuel transportation from origin to pipeline. In 2023, we successfully tested this hydrogen generation technology at our Central Resource Center and will continue to evaluate it.

[18] RNG emissions savings verified by a third-party in compliance with Oregon Department of Environmental Quality standards.
[19] S&P Global, Gas utilities increasingly focus on pipeline blending in hydrogen pilot projects, 2023

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Carbon Capture, Use and Storage (CCUS)

In 2023, we installed two CleanO_2 CarbinX carbon capture units at commercial customers to pilot the equipment. The units are designed to capture and reduce GHG emissions from existing boilers as well as reduce energy use by using captured waste heat to preheat water so less energy is needed to heat the water. The captured CO_2 is converted into a raw material used in soap. We see opportunities with this technology and are excited to see the results of the pilot.

What's Next

Our nation is at the beginning stages of developing renewables for the gas system. As the electric system works to increase wind and solar generation, we need to aggressively accelerate development of renewables for our pipeline networks. We're pleased with the progress we've made at NW Natural, and we're continuing to channel the advantages of our modern infrastructure, our expertise, and our innovative spirit in support of our environmental vision.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Environmental Responsibility in Our Business & Operations

We strive to lessen our impact on the environment in a multitude of ways throughout the business.

Environmental Policy & Leadership

We encourage all employees to participate in our sustainability efforts. In 2023, our Sustainability Equity and Engagement Committee (SEEC), an employee-led interest group, celebrated its 10th anniversary. SEEC promotes continuous improvement and adoption of environmental practices through employee education and programming.

Our dedicated environmental management and sustainability department focuses daily on environmental policy and management issues, and reports to our VP, chief public affairs and sustainability officer, who reports directly to our president. Board meetings for both NW Natural Holdings and NW Natural incorporate environmental items into the topics reviewed, including climate-related risks and opportunities. The Public Affairs and Environmental Policy Committee of the boards of directors provides oversight of environmental matters. The committee is guided by the company's environmental policy, which is reviewed and approved annually. It sets forth our commitment to:

- Environmental stewardship, for example supporting conservation through our decoupling rate structure for customers
- Reducing emissions, releases, and waste, for example through our emissions screening tool for supply purchases
- Using our natural resources and energy more efficiently, for example supporting efforts in RNG
- Protecting and enhancing the quality of the natural environment, such as working hard to reduce leaks in our distribution system
- Operating our business in an increasingly sustainable manner, through exploring new technologies such as hydrogen

The Board receives updates and discusses the Company's approach to climate change-related risks and opportunities at each regular meeting. Climate considerations are also woven into the Board's oversight of the Company's strategic planning and risk management processes.

Environmental Management

With one of the most modern natural gas distribution systems in the country, in a well-established service territory, NW Natural performs a limited amount of new construction or other work that might disrupt local communities and the environment, including waterways. When work is required, our environmental management team strives to comply with all environmental regulations and leave the area the same as, or better than, it was when we began. Our environmental management program is supported by:

- Our rigorous procedure manual, which provides guidance on environmental matters. This includes EPA, Oregon Department of Environmental Quality (DEQ) and Washington Department of Ecology (DOE) regulations, and local jurisdictions' requirements. In certain instances, we take the strictest regulation within our jurisdictions and apply it to our entire service territory, which assists us in holding ourselves to a higher standard and facilitates consistent procedures across our operations.
- Our internal Environmental Management System (EMS), which addresses how our resource centers and field work sites are designed and operated. The EMS procedure manual:
  - » Outlines how to design sites to prevent runoff and soil erosion, mitigate spills, obtain necessary Clean Water Act permits, and follow federal, state, and local rules and regulations. These rules and regulations are primarily related to water quality, air quality, chemical handling, spill response, waste, cultural resources, and threatened and endangered species.
  - » Serves as a guide for rigorously vetting products, substances, activities, and services to help us try to minimize our impact on the environment and use the safest and most environmentally responsible materials appropriate in our operations. We keep environmental records and provide environmental training for each project, and we offer awareness programs and trainings for new employees and refresher trainings for established employees.
- Allows us to assign roles and responsibilities, as well as monitor activities for compliance with our permits. Our internal audit department performs periodic audits of our environmental programs and trainings, and external agencies such as EPA, DEQ, and DOE also periodically audit our permitted facilities.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Suppliers

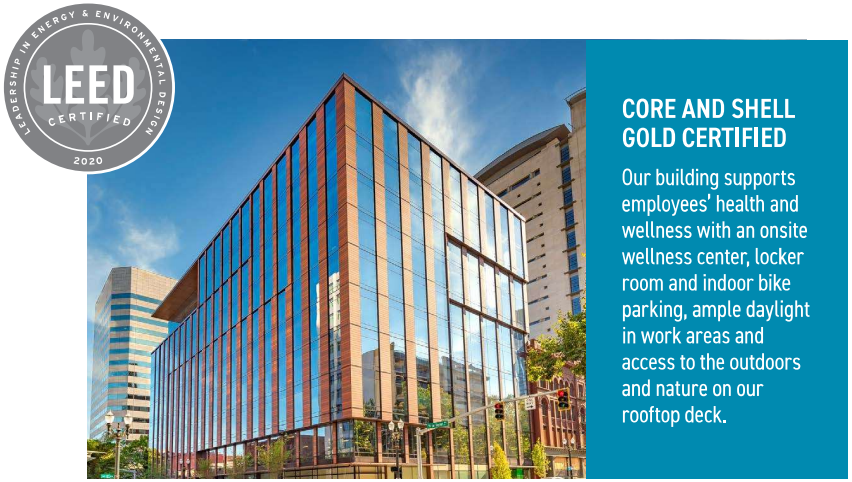
In addition to our efforts to procure RNG and target gas purchases from more environmentally conscious producers, we have similar criteria for vendors we work with:

- We have implemented a sustainable purchasing program covering various focus areas, including sustainability, community, and governance. We strive to procure goods and services in an increasingly sustainable manner, and we expect our suppliers to comply with our Supplier Code of Ethics.
- Our Supplier Code of Ethics contains expectations for our suppliers related to environmental protection and sustainability. We also include language setting expectations for environmental stewardship and sustainability in our master contracts and agreements, and we have launched a website specific to suppliers that allows them to better understand how we promote sustainable procurement efforts.
- We monitor key vendors' environmental records, and we have implemented a scorecard for certain vendors that addresses identified sustainability-related topics, including environmental performance.
- As part of our RFP process, we include in our bid evaluations the extent to which contractors demonstrate their willingness to work together on finding ways to reduce environmental impacts, and we ask prospective suppliers to describe their current or planned practices for utilizing recycled products and minimizing waste.

Energy-Efficient Facilities

Our headquarters and operations center in Portland is LEED Core and Shell Gold certified by the U.S. Green Building Council. A range of features allow us to use less energy, conserve natural resources, minimize waste and support our strategic goals.

- **Energy conservation measures**: Through our high-efficiency building envelope (wall, roof and window assemblies), efficient heating, ventilation and air-conditioning system and controls, 100% LED lighting and other measures, we estimate energy cost savings for the building's core and shell of approximately 28% annually, compared to a code-compliant building—more than 550,000 kilowatt hours and approximately 8,000 therms of natural gas saved.
- **Water savings**: Efficient plumbing fixtures that use approximately 40% less water than code-compliant fixtures reduce water demand, along with a drip irrigation system to efficiently water native plants on our rooftop deck. In 2023, we used approximately 880,000 gallons of water.
- **Use of green building materials**: Nearly 21% of the materials cost for the building core and shell construction came from recycled materials, reducing environmental impacts of extracting and processing virgin materials.
- **Convenient downtown location**: Our headquarters are conveniently located in our downtown core within walking distance of transit stops for public bus lines, light rail, and the streetcar. We provide secure and indoor bicycle parking to further encourage sustainable transportation alternatives and reduce pollution from automobile use.
- **Onsite recycling and composting**: To limit waste, each floor is equipped with central recycling and compost stations.



CORE AND SHELL GOLD CERTIFIED

Our building supports employees' health and wellness with an onsite wellness center, locker room and indoor bike parking, ample daylight in work areas and access to the outdoors and nature on our rooftop deck.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

As we're continuing to renovate and upgrade our facilities, we are inspired by LEED certification principles and focus on building resilient, energy-efficient structures that serve the needs of our customers, employees, and the environment.

- For NW Natural's use of natural gas in its operations, we pay for carbon offsets through the Smart Energy program. We became our first Smart Energy customer when the program launched in 2007, and since 2020, NW Natural has offset 100% of the CO_2 associated with the natural gas heating for its facilities.
- Our facility in Sherwood, Oregon once again received Washington County's Green Business Leaders certification in 2024, which recognizes a company's efforts in sustainable materials management, toxics reduction, and social responsibility.
- NW Natural Salem received Oregon's EcoBiz Certification, designating them as a location that met high standards to reduce toxins, prevent pollution, and protect the environment.
- We are part of the Energy Trust of Oregon's Strategic Energy Management program, which helps us continually improve our operations through equipment and building choices as well as employee behavior.

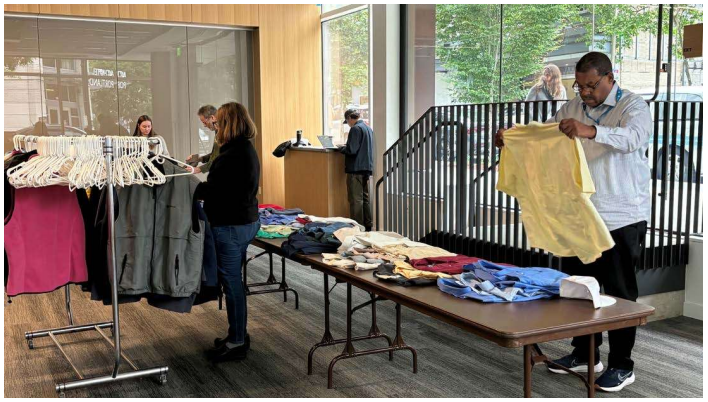
Waste Reduction

Our team of in-house environmental specialists oversee all waste assessments. The environmental specialists must have over ten years of experience managing waste stream assessments and complete OSHA's 40-hour "hazwoper" certification. Additionally, they:

- Participate on a chemical evaluation safety team that works to eliminate products that may produce potentially hazardous waste before it's generated, and they periodically perform waste audits at our resource centers
- Attend annual waste management training seminars hosted by the Oregon DEQ
- Implement several written environmental modules directed at managing commonly occurring waste streams
- Identify opportunities for continued improvement

We strive to reduce and recycle any byproducts of our process by:

- Performing waste audits at all our resource centers.
- Implementing and maintaining recycling programs in our operations. We currently recycle 100% of the following items: batteries, waste soil from our fleet transportation, oil filters, antifreeze, scrap metal, and some types of plastic. NW Natural's recycling activities in 2023 eliminated over 85% of the total volume of total ordinary operating waste potentially requiring disposal ,and diverted those materials into recycling opportunities instead. We recycled more than 2,000 pounds of plastic film in 2023.
- Diligently following EPA's rules and regulations for hazardous waste. We report to the state government the amount of hazardous waste that is incinerated or sent to the landfill annually. In addition to materials recycled in 2023, NW Natural disposed of materials from ordinary operations as well as remedial-site wastes. Of the ordinary operational waste that was disposed; 99% was non-hazardous waste (98% landfilled and 2% incinerated) and 1% was hazardous waste (33% landfilled and 67% incinerated).
- Signing up nearly 336,000 customers for paperless billing, enabling them to receive their bill electronically rather than through the mail. Enrollment increased by 3% in 2023, and today nearly 42% of our customers are enrolled for paperless billing. To further promote online transactions and paperless billing to conserve resources, during Earth Month in April we promoted paperless billing. We also promote paperless billing to customers throughout the year via their bills, print and electronic newsletters, and more.
- Holding an annual, free NW Natural logo wear swap where employees can exchange used NW Natural clothing and gear and refresh their wardrobe.



Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Air

In addition to our Lower-Carbon Pathway, we are conscious of emissions from our transportation fleet. We have invested in the use of compressed natural gas (CNG), a fuel that emits 90% less nitrogen oxide (NOx) air pollutants and particulate matter from heavy-duty vehicles than diesel.

- We have invested in five CNG stations for our own fleet, which includes 198 vehicles.
- In 2023, NW Natural supplied 11 companies and municipalities with over 4.5 million therms of CNG to power their fleets.
- Our idling-reduction initiative is aimed at reducing particulate emissions. Emissions such as sulfur oxides (SOx), NOx, and non-methane volatile organic compounds (VOCs) are below applicable permitting thresholds for the majority of our facilities and, as such, we do not consider them to be significant to our operations.

Water

While our natural gas distribution operations are not water-intensive, we strive to adhere to all Clean Water Act requirements, and we use limited water, much of it recycled, for hydrostatic testing and pipeline construction. We also repurpose water, use leading stormwater-management techniques, and conduct regular audits at construction sites.

Biodiversity

We aim to lessen the impact to our ecosystem before, during, and after construction by working with the Oregon Department of Fish and Wildlife (ODFW). We work to restore and revegetate habitats that have had temporary impacts using approved native seed mixes that are beneficial to wildlife. For permanently impacted habitats, we work with ODFW to enhance the habitat quality as much as possible.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Customers & Community

We've operated for more than 165 years with a focus on serving our customers and investing in our communities. It's not just what we do, but how we do it.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Customers & Community Highlights

Continued our **two-decade streak** of **earning high marks** from our customers in the J.D. Power Gas Utility Residential Customer Satisfaction Study

DISBURSED
$9.9 MILLION
in energy assistance to help low-income customers pay bills and stay warm

DONATED OVER
$1 MILLION
to nonprofits

Distributed approximately **$4 million** to fund weatherization projects and energy efficiency upgrades for low-income customers in Oregon

DISTRIBUTED
$23.5 MILLION
in bill credits to Oregon customers

KEPT CUSTOMER BILLS LOWER
than they were 15 years ago by judiciously managing system capacity and skillfully navigating record volatility in the natural gas market

Today **6% of customers** are in the bill discount program for income-qualifying residential customers

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural®

Caring for Our Customers

Our customers have always been the focal point of NW Natural. We work to go above and beyond in providing our customers with superior service. We engage with community members and organizations to understand customers' priorities, challenges, and successes. NW Natural supports customers in a variety of ways including energy efficiency programs, bills savings plans, and low-income assistance. Additionally, we prioritize philanthropy to better the community we serve.

A core value of our service is making it easy for all our customers to get help and manage their accounts from every location. We are available to our customers through our 24/7 self-service and account management options online, our dedicated customer service center, and field service technicians. In 2023, our customer contact center and phone systems answered nearly 300,000 calls, and our service technicians and other field resources responded to over 200,000 requests. Our customer satisfaction survey continued to show high satisfaction ratings among contacted customers:

Percentage of Customers that Rated NW Natural Either 9 or 10

(On a 10-point scale, where 1 = Poor and 10 = Excellent)

	OVERALL	STAFF INTERACTION	PHONE	SERVICE TECH
2023	75%	90%	83%	97%
2022	80%	90%	84%	96%
2021	84%	91%	86%	96%
2020	77%	89%	86%	93%

Award Winning Customer Service Experience

In 2023, NW Natural continued its two-decade streak of earning high marks from our customers in the J.D. Power Gas Utility Residential Customer Satisfaction Study. For the fourth year in a row, the company scored second highest in customer satisfaction among large utilities in the West. This is the 20th time the company has scored in the top two in the West regional segment, which includes utilities serving 500,000 or more residential customers. NW Natural also scored in the top 10 in the nation among large gas utilities. The J.D. Power study measures residential customer satisfaction with natural gas utilities across six categories: safety and reliability; billing and payment; price; corporate citizenship; communications; and customer service.

Natural Gas Remained Affordable in 2023

The Portland metro area continues to be the most affordable major metropolitan area[1] on the West Coast. Even with economywide inflation and increases in the wholesale price natural gas, our residential and commercial customers paid less for gas in 2023 than they did 15 years ago. A typical monthly natural gas bill for a residential customer was $82 in 2023. In 2023, we saw residential bills decrease by 4% and commercial bills decrease by 39% compared to 2008. NW Natural has taken several steps to increase accessibility and affordability[2] including:

- Locking in gas purchases at lower rates
- Smart investments in energy storage
- Effective and efficient operations
- Energy efficiency measures

[1] As defined by the U.S. Office of Management and Budget for Metropolitan Statistical Area on the West Coast.

[2] Affordability also depends on the wider economic dynamics of our service territory as well as the cost of the natural gas commodity.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural®

Customer Support Programs

We want all our customers who qualify for payment assistance to use the resources available to them. We actively seek out income-eligible customers across our service territory to help lower their gas bills. We offer multiple financial assistance programs targeted at reducing gas bills for low-income customers, especially energy burdened[11] households that spend a disproportionately high percentage of their income on energy costs. Meaningful community engagement is a critical piece of these programs' success, so we work directly with community members and local community action agencies and organizations. Our outreach strategy prioritizes clear communication and includes:

- Seeking community input to make sure we're reaching out to residents in a culturally competent way
- Reducing barriers that prevent underserved communities from finding information and receiving energy assistance
- Producing communication materials in our service territory's five most commonly spoken languages
- Maximizing the reach of our messaging through multiple communication channels, including our customer website, social media platforms, monthly newsletters, emails, and bill inserts

Energy equity is central to our core value of caring, and we believe it is essential to the strength and well-being of the communities where we live and do business. In 2022, we conducted our first low-income needs assessment to better understand the low-income customer base in our region. We engaged a third-party consultant to layer multiple data sources to identify areas of high energy burden. In 2023, we refined and improved our low-income needs assessment by engaging a Portland State University MBA graduate research team to help us further target our outreach. As a result of our efforts, we've increased the percentage of customers receiving assistance from approximately 3% of customers for the 2022 program year to 6% for 2023.

[11] Energy burden is defined by the U.S. Department of Energy as the percentage of gross household income spent on energy costs.

Community & Equity Advisory Group

In 2022, we voluntarily launched a community development program—the Community & Equity Advisory Group (CEAG). The group is committed to bringing community voices forward who have historically been left out of the energy planning space. The objective is to make NW Natural programs and practices more equitable and provide us with direct feedback, recommendations, and advice on planning and programs. Community-based organizations (CBOs) in our service territory who have not historically had a voice within the energy planning or utility industry are formally recruited to join CEAG as members and are compensated by NW Natural for participation. We monitor community development programs and identify local stakeholders or communities of interest through a formal system of applications and adhere to community consultation guidelines and ongoing consultation mechanisms throughout the process. Our objective is to bring in these voices in during the early stages of a project or process. Representatives from CBOs and NW Natural join with a 3rd party facilitator to meet to openly discuss community perspectives and lived experiences related to our energy system planning and policies, renewable resource development, income-based programs, philanthropic investments, workforce development, and more. We look to the facilitator for guidance on community engagement and advisory group practices, including creating collaborative, trusting spaces for members to share their experiences.

For example, we consulted CEAG at the early stages of our Bill Discount Program, and based on our conversations with CBOs, we redesigned our communication strategy for the program to improve accessibility, education, and digital and printable content. Best practices developed with the CEAG on specific programs are then applied throughout the company's operations. This systematic involvement of local stakeholders enhances our commitment to promote community development and provides an accessible mechanism to collect, record, and address complaints, and set community development targets and deadlines that work for both our community and NW Natural. Understanding the experience and perspectives from diverse and underrepresented groups is imperative to the success of the communities we serve.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Through customer assistance programs, we provided **$13.5 million** of support in 2023, an **increase of 71%** compared to 2022.

2023 NW Natural Customer Assistance Programs

Program	Funds Distributed ($ in millions) 2023	2022	% Change
Bill discount program	$3.6	$0.4	+800%
Low-income energy assistance programs[12] (LIHEAP, OLGA, GREAT, Misc. programs)	$5.7	$5.1	+12%
Gas assistance program (Shareholder and customer funded)	$0.2	$0.1	+100%
Low-income energy efficiency Programs (OLIEE and WALIEE)	$4.0	$2.3	+74%
Total	$13.5	$7.9	+71%

2023 Low-Income Energy Program Savings

175 OREGON DWELLINGS
SAVED OVER 56,000 THERMS OR 5,600 MMBTU

12 WASHINGTON HOMES
SAVED OVER 3,800 THERMS (380 MMBTU)

[12] The program year date range is October 1, 2022 to September 30, 2023, coinciding with the release of federal Low-Income Energy Assistance Program funds.

Our programs include:

- **Bill Discount Program:** This program provides income-eligible customers with ongoing discounts ranging from 15% to 40%, in addition to other energy assistance customers may already be receiving. At the end of 2023, approximately 44,000 customers were enrolled.
- **Gas Assistance Program (GAP):** For over 40 years, GAP has helped low-income families and seniors in our communities pay their heating costs. Since its inception, the voluntary program has raised more than $6.7 million and assisted more than 60,000 people. In 2023, customers facing financial challenges received nearly $0.2 million from GAP to cover their heating costs.
- **Low-income energy assistance programs:** Our programs distributed over $5.7 million in energy assistance during the 2023 program year. These programs include Oregon Low-Income Gas Assistance (OLGA), Gas Residential Energy Assistance Tariff (GREAT), the federal Low Income Home Energy Assistance Program (LIHEAP), and more.
- **Low-income energy efficiency programs:** We work with state and community organizations to provide whole-home weatherization, efficiency upgrades, and energy education. We distributed approximately $4 million Oregon Low-Income Energy Efficiency Program (OLIEE) funds as well as funded two community development projects to provide energy efficiency to low-income, hard to reach populations. Additionally, we distributed over $79,000 Washington Low-Income Energy Efficiency Program (WALIEE) funds.

Other ways we help our customers stay warm and pay their bills include:

- **Suspension of disconnections** during severe weather events, prolonged periods of extreme cold, poor air quality, wildfires, and winter holidays
- **Time Payment Agreements (TPAs)** that allow customers with past-due accounts to pay in installments and avoid disconnections
- **Medical Certificate exemptions and TPAs** for customers with medical conditions

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Caring for and Investing in our Community

As an essential service provider and a key employer in the Northwest, we view caring for our communities as both a moral imperative and a sound business practice. We invest time and resources in community development programs to benefit all the communities we serve—especially those facing social and economic challenges. In order to understand our community and the energy challenges they face, we monitor community development programs, identify local stakeholders, and consult with organizations through initiatives like our Community & Equity Advisory Group. These meetings provide an accessible mechanism to collect, record, and address issues, and set community development targets that work for both our community and NW Natural.

Throughout 2023, we supported over 200 community and nonprofit groups in the fields of youth and family resiliency, environmental stewardship, health and human services, and arts and culture. In 2023, we exceeded $1 million in total giving. Our customers and neighbors are key stakeholders in our business. Community matters are overseen by the Public Affairs and Environmental Policy Committee of our board of directors. Our VP, chief public affairs and sustainability officer is the NW Natural executive tasked with primary responsibility for government affairs and community involvement programs.

Stakeholder Engagement

We value our community stakeholders, and we actively seek a broad range of perspectives in our decision-making processes. Our senior management and board of directors use feedback received through our various outreach activities to help inform business strategy and decisions.

Our community of stakeholders starts with our employees and extends to our customers, business partners, suppliers, labor unions, shareholders, lenders, financial analysts, regulators, government officials, community leaders, the media, nonprofits, and other organizations. Our Human Rights Policy sets forth our public commitment to work to engage with these groups where appropriate to better enable us to listen to, learn from, collaborate with, and incorporate the views of stakeholders into our business.

As a regulated utility, we remain transparent through regular public meetings, workshops, and proceedings before the public utility commissions in the states where we do business. Approximately every two years, we develop our integrated resource plan (IRP), which describes how we plan to meet our customers' energy needs now and in the future while fulfilling our commitment in helping the region reduce its impact on the climate. The IRP is developed through a process open to the public, informed by feedback, reviewed by a diverse set of interested parties, and ultimately filed with the public utility commissions that regulate our business.

Service ethic is one of our core values, and one way we foster this value is by engaging regularly with customers and community members through satisfaction and opinion surveys, along with our website, newsletter, and social media channels. Our government affairs team regularly solicits feedback from governments, legislators, nonprofit organizations and community members on important issues, trends and policies so we can be responsive to the communities we serve. We also engage with our communities through partnership, programs and philanthropic support of nonprofit organizations that provide essential services. In 2023, we continued our direct engagement with nonprofits that serve our low-income community and customer needs.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

We aim to be the employer of choice and regularly engage with employees through a wide variety of channels such as internal and external websites, meetings and events, communications, and surveys, including our annual engagement survey that is designed to enable company leaders to gather valuable feedback and guidance from employees. In 2023, we continued to engage in surveys and other means in order to attend to employee concerns. We have a hotline, maintained by a third party, available for our employees, our communities or anyone else to anonymously raise concerns.

Our notable engagements in 2023 included:

- We participated in ongoing policy, renewables project and climate action planning discussions at the federal, state, and local level, and worked with elected officials, community leaders and nongovernmental organizations to share our Low Carbon Pathway goals and pipeline decarbonization strategies.
- Dedicated staff allowed us to increase capacity and focus on growing community engagement. They worked with partners to continue to improve participation in low-income and community serving programs and to increase responsiveness to complex needs of front-line communities.
- We continued funding and enhanced community outreach on arrearage management resources, including partnering with community organizations to reach populations experiencing hardship.
- We developed partnerships with local community action agencies to increase awareness of low-income assistance and weatherization resources.
- We attended more than 35 events and directly engaged with individuals on topics ranging from natural gas safety to renewable energy education.
- We awarded three college students $5,000 each to enroll in essential training that will prepare them for careers in the trades.
- Through our supplier webpage, we have promoted sustainable procurement and engaged with diverse suppliers. In 2023, we increased the number of diverse supplier inquiries as a part of our sustainable purchasing program.

Charitable Donations & Volunteerism

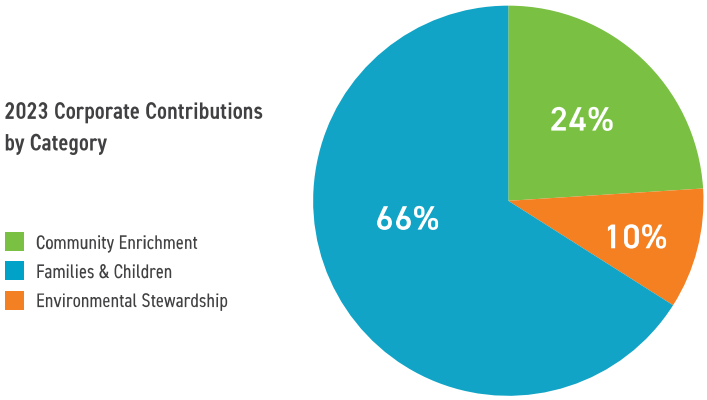
Charitable Donations

Corporate philanthropy is an integral part of NW Natural's company culture and an enduring example of our core value of caring. Through our shareholder-funded Corporate Philanthropy Fund we gave over $1 million to more than 380 local nonprofits in 2023, with an emphasis on supporting family and children, environmental stewardship, and community enrichment.

Through our annual Spirit of Giving campaign, employees and retirees donate to their favorite local nonprofits and a 100% match from the shareholder Corporate Philanthropy Fund doubles the impact of their generosity. In 2023, employees gave to 233 nonprofits and together with the company match, employees and retirees contributed $0.2 million to local charities. Additionally, in response to the wildfire disaster in Maui, Hawai'i, NW Natural partnered with our Asian American Network to hold a fundraiser and matched the first $5,000 in employee contributions.

For NW Natural's conservation champion, we selected the Oregon Bee Atlas, a program that focuses on supporting an organization working toward environmental sustainability. Oregon Bee Atlas is a cooperative of diverse stakeholders that work to maintain and enhance bee health in Oregon. From 2023-2025, they will receive $10,000 per year as well as in-kind support and employee engagement.

2023 Corporate Contributions by Category



Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Inclusion & Belonging

Inclusion and belonging guide our charitable giving, and we're committed to working with the community to improve outcomes for people who face barriers based on racial, social, economic, and geographic inequalities. We continue to ensure in 2023 at least 10% of philanthropic dollars are directed to organizations whose primary mission is supporting racially or culturally diverse or marginalized groups. We ensure that all organizations receiving NW Natural philanthropic dollars demonstrate actions, programming and practices that align with our priority of inclusion and belonging principles.

NW Natural supports local organizations making a difference through our Programs of Focus. Grant recipients are chosen through a competitive review process that actively engages a diverse group of employees from across the company. The program is NW Natural's highest level of philanthropic support. In 2022, the company announced its Programs of Focus for 2023-2025. These organizations will receive $0.4 million in unrestricted funding over the next three years, along with in-kind resources and volunteer support from employees. Our 2023-2025 programs of focus are:

- Adelante Mujeres
- Store to Door
- Growing Gardens
- Asian Health & Service Center

Sponsorships & Events

Hospitality engagement is part of NW Natural's long history of community engagement, and every year we contribute resources and sponsorship dollars for events organized by nonprofit, community, and civic organizations. Our community events team served over 10,400 meals and provided 193 shade tents worth $0.1 million for events held by groups such as Pride Northwest, Portland Veterans Stand Down, and CASA. We also provide our headquarters conference space and food service to nonprofits. Events like these are core to how we show up for our communities.

For Volunteer of the Year, Safety is Key

For Steve Eversmeyer, safety is a thread that runs through both his professional and personal life. As a safety consultant, Steve helps maintain the company's commitment to keeping employees safe while they work. In his personal time, as a long-time volunteer with Mt. Hood Ski Patrol, Steve helps keep people safe on the mountain. For over 37 years, Steve has contributed to the patrol in various capacities, including as an instructor for medical and avalanche training programs, and as an active ski patroller. His volunteer work also extends beyond the mountain to supporting local running and bike race events in the Cascade Locks and Portland metro areas.

> "Steve's dedication to safety is unparalleled. During the workday he is committed to NW Natural employee safety and after hours he shares that passion with the community. It is a privilege to recognize his volunteer service."
>
> — Mary Moerlins, NW Natural director of environmental policy and corporate responsibility

NW Natural®

Volunteerism

We are proud of our employees that volunteer to better our community. We offer a number of volunteer opportunities throughout the year, from downtown cleanups to grocery delivery for adults living with disabilities. In 2023, we chose four Volunteer Champions, who are individuals or employee groups, to train, recruit, and lead other interested employees in volunteerism, with a goal to reduce barriers to volunteering. Every year our employee volunteers and Volunteer Champions are recognized at a company-wide celebration, and an outstanding employee is awarded Volunteer of the Year.

Through our Dollars for Doers program, NW Natural makes financial contributions to the nonprofits that employees support with their volunteer time. The program, funded with shareholder dollars through our corporate philanthropy fund, is one of the ways NW Natural supports our culture of caring and the good work employees do in the community.

2023 Dollars for Doers Statistics

29	Number of 2023 Dollars for Doers grants
3,606	Estimated number of volunteer hours in 2023
9	Average number of years volunteers have been engaged with their organizations

Political Contributions

NW Natural makes campaign contributions to state and local candidates and political committees and caucuses, as allowed by law. In addition, NW Natural Holdings can make contributions from time to time. Our Code of Ethics sets forth our expectations regarding the use of company funds for political purposes. We also maintain memberships in various business and trade associations that advocate on public policy. In 2023 we made campaign contributions and had lobbying expenditures totaling approximately $3.3 million on a consolidated basis for NW Natural Holdings.[13]

[13] Calculated using U.S. Internal Revenue Service guidance.

NW Natural®

Who We Are

Our more than 1,200 employees are the core of NW Natural, and we are committed to providing a dynamic and rewarding work culture so they can thrive in their career. We support our employees by offering competitive benefits, growth and development programs, and social opportunities. We strive to prioritize belonging and equity in all aspects of our work, from hiring and daily operations to the way we interact with our customers and communities, to the biggest decisions we make as a business.

2023 Employee Satisfaction Survey

We highly value employee feedback and listen to the voice of our workforce. Each year, all employees are invited to complete a survey to provide feedback on their job, supervisor, work group, training programs, and the company. This information gives company leaders valuable insight on ways to make NW Natural a more effective company and a better place to work.

Every officer reviews the summarized survey results, and frontline managers are encouraged to initiate meaningful dialogue with employees about the responses their teams provided. Additionally, our CEO, David Anderson, and officers regularly visit each work location to answer questions and get input from employees.

79%	Employees participated in 2023
89%	Proud to work for NW Natural
84%	Feel like they belong at NW Natural
87%	Engaged, committed, and enthusiastic about their work at NW Natural

Results of our 2023 survey indicated that employees are engaged in their work and appreciative of their managers. There was a wide appreciation for unified work groups and collaborative coworkers, and diversity, equity, and inclusion (DEI) was a topic of celebration. Surveyed employees also agreed or strongly agreed with the following:

96%	Agree they operate with integity and ethical conduct in their work area
96%	Demonstrate safe work practices in their work area

NW Natural®

Supporting Our Employees

NW Natural strives to offer competitive total compensation packages[1] designed to attract and retain employees and meet the needs of our workforce. We continuously look for ways to enhance employees' physical, psychological, and financial well-being. This is reflected in the programs we offer to meet the needs of employees and help them care for their families.

> "Every day our employees embody the pillars of NW Natural, and I am honored to work with them."
>
> — David Anderson, NW Natural CEO

Employee Benefits

Health coverage for all full-time staff: We provide multiple insurance carrier and health plan options for employees. All plans include outpatient and inpatient medical care, vision, and dental insurance, offer coverage for dependents, and are transgender inclusive. Non-union employees have the option to enroll in a Health Savings Account that the company contributes to.

Financial wellness: We provide a 401(k) with employer match, automatic employer contribution to 401(k) for non-pension employees, pension plan for employees hired before 2007 (non-union) or 2010 (union), and employee stock purchase plan.

Paid leave and sick time: We provide paid parental and bereavement leave, and we pay for short- and long-term disability insurance that provide some wage replacement when an employee is out for a qualifying health condition. Non-union employees get 80 hours of paid sick time annually, more than the national average reported by the U.S. Bureau of Labor Statistics.

Generous vacation and holidays: Non-union employees start with 20 days of paid time off (PTO) per year at beginning of employment and receive 31 days of PTO per year after 15 years of service. In 2023, NW Natural changed its PTO policy to incentivize employees to use their vacation days and increased the number of days new employees receive. So far, employees' use of PTO has increased 13% as a result of the new policy. Union employees annually accrue 16 days of PTO at the beginning of their service, and annually accrue 26 days of PTO after 13 years of service. This compares to approximately 10 days for new hires on average for other utilities in the Pacific Northwest.[2] Both non-union and union employees receive a total of 13 paid holidays including 3 floating holidays. Nationally, the average number of vacation leave reaches 20 days only after 20 years of employment.[3]

Hybrid work model for office workers: In 2023, we offered a hybrid work model based on meeting individual employees' needs and working styles. Based on employee feedback, our officer team implemented a flexible hybrid work model for 2023 that allowed managers and supervisors to decide what's best for the people they lead, as long as work arrangements meet the company's goals and continue to support our high level of customer service. We conducted a survey at the end of 2022 to track how people were doing with the hybrid work model, and results were overwhelmingly positive, with 97% of employees saying their manager trusts them to manage their time and 93% saying their team is connected and productive while working a hybrid schedule. In 2023, we announced our flexible schedule beginning in 2024, where individual contributors work in the office a minimum of two days a week and managers work in the office at least three days a week.

Career development and culture: We invest in employees' career growth through professional training programs, a robust mentorship program developed with an emphasis on cultural relevance for underrepresented groups, and tuition assistance. Employee resource groups (ERGs) and other employee-led organizations help our workforce form connections with their coworkers.

Onsite offerings. We offer free fitness centers at our Portland headquarters and most resource centers. The headquarters building features indoor bike parking, ergonomic workstations, lactation and quiet rooms, and access to nature on our rooftop deck. Employees working at our headquarters can get a company-paid public transit pass.

[1] Our package options vary depending on date of hire and whether the employee is full-time, part-time, or a union member. Employees who work more than 20 hours are also eligible for certain benefits.

Pay Equity

We strive to compensate all our employees equitably, and we have established multiple initiatives to help us achieve pay equity across our workforce.

- We do a comprehensive pay analysis for each new hire.
- To help identify opportunities for improving equity, an external consultant annually reviews our regular employees' pay data.
- We periodically review pay to provide adjustments when needed during an employee's tenure. These reviews include internal and external equity reviews, and when an employee has a promotion, job reclassification, and/or department reorganizations.

We are proud of our focus on increasing pay equity, and we continue to work on evaluating equitable wages. We are working to increase the number of women and nonbinary people in the field.

Pay Transparency

We believe in the principles of pay transparency as a fundamental aspect of our commitment to fairness and equity. We work to provide employees with clear and accessible information about job profiles, salary ranges, total compensation statements, and performance related incentive information to increase employees' understanding of their pay and opportunities.

Growth & Development

To help employees reach their full potential, NW Natural provides education, training, mentorship, and other programs designed to build skills and relationships. Annually, we offer:

- **Gas Class**: Our internal series of informational videos educates employees on the history of NW Natural, the world of utilities, and how our business is run.
- **Training programs**: In addition to our comprehensive safety training for employees in the field (see the Safety & Reliability section), we require all employees to complete comprehensive training programs including cybersecurity, and ethics training. Certain employees complete further technical, managerial, contractor training, and more. We strive to provide training programs that are effective, relevant, and engaging, and we regularly evaluate our trainings through surveys and feedback, among other things.
- **Mentorship**: Our internal peer-to-peer mentorship program is focused on building relationships, diversity and belonging, and skill-building. The program was designed from the ground up in 2022 to offer robust opportunities for development for all employees, with a focus on racially and culturally diverse employees, and we strive to improve it through post-program surveys and evaluations.
- **Leadership and development**: We provide ongoing management and leadership training through a variety of programs. In 2023 we revamped our monthly leadership meetings to emphasize skill building with topics such as inclusivity and leading in a hybrid workplace.
- **Educational events**: We offer lunch-and-learns on various topics, utility finance classes, ERG leadership training, and more.
- **Tuition, scholarships, continuing education**: Qualified employees are eligible for tuition support of up to $5,250 per year for relevant undergraduate and graduate degree programs. Employees are also able to attend continuing education courses relevant to their areas of expertise through partner organizations and LinkedIn Learning.

Union Partnership

Approximately half of NW Natural employees are represented by the Office and Professional Employees International Union Local 11, AFL-CIO. The company has a history of maintaining good relations with the union through communication and collaboration. Working together, union and NW Natural leaders reached a mutually beneficial agreement in 2019 that is in effect through May 31, 2024. During calendar year 2023, NW Natural did not experience any work stoppages (strikes or lockouts) and had zero idle days for the year. The company and the union work together with a collective aim to achieve a transparent relationship where bargaining union employees feel valued and supported.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Growing Through Mentorship

Caring is a core value at NW Natural, and that means we work every day to support, engage, and empower all employees. As part of this commitment, we have created a mentorship program that offers robust opportunities for growth and development and aligns with our focus on DEI. All employees are eligible, and mentors and mentees are paired for a six month program, on paid company time. Topics include career progression, developing skills to work more effectively, creating a culture of belonging, and building one-on-one and group relationships. 46 mentors and mentees graduated from our 2023 program. In our follow-up survey, respondents rated their experience a 4 out of 5, and they reported an increase of confidence in all skills taught in the program.

> "My mentor helps me align and set my goals. He helps me understand that goals can be adjusted. Through this mentorship I've learned to broaden my horizons."
>
> — Jonny Walker,
> 2023 Mentorship Program participant

Employee-Led Engagement Opportunities

Employee Resource Groups: Our ERGs create opportunities for employees to connect with each other around shared backgrounds, interests, and experiences. In addition to helping their co-workers understand and value diversity and belonging, ERGs engage in community outreach, partnerships, host educational and entertaining events for celebrations and holidays, and support recruiting, development, and advancement of diverse employees within the company.

OUR CURRENT ERGs

- AFRICAN AMERICAN EMPLOYEE RESOURCE GROUP
- ASIAN AMERICAN NETWORK
- NEURODIVERSITY NETWORK
- RAINBOW ALLIANCE
- SOMOS UNIDOS
- VETERANS EMPLOYEE RESOURCE GROUP
- WOMEN'S NETWORK

Diversity, Equity, & Inclusion Council: Founded more than 20 years ago, the DEI Council works to make NW Natural Holdings a more diverse, inclusive, and welcoming workplace for everyone. The council supports this vision through education, outreach, advocacy, and action.

Sustainability & Equity Engagement Committee (SEEC): Celebrating its 10th anniversary in 2023, SEEC works to build a broad coalition around energy, equity, and environment practices. The committee promotes sustainable practices within the company and serves as a conduit to management as well as community partners working to address climate change and environmental equity.

Wellness Advisory Committee: The Wellness Advisory Committee guides the company's wellness program, offering advice, new ideas and feedback from their peers to further the physical and mental health and well-being of all employees.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Diversity & Belonging Strategy

At NW Natural, we know that all of us can benefit when we amplify underrepresented voices, celebrate our differences, and create an environment where everyone can contribute, thrive, and prosper. To accelerate our work in DEI, and belonging, we hired an outside consultant to review our progress on diversity. We convened focus groups and created an assessment and a set of recommendations for our executives. Incorporating this feedback, in 2019 we introduced a comprehensive DEI strategy overseen by the Public Affairs and Environmental Policy Committee of our board of directors.

Race/Ethnicity	NW Natural 2023	Oregon 2020 (Census Data)
American Indian or Alaska Native	3%	1%
Asian	6%	5%
Black or African American	4%	2%
Decline to Respond	2%	N/A

[5] Deloitte, Women in the boardroom: A global perspective, 2023

Our People

We are actively working to build a diverse workforce that reflects the communities we serve. We have a diversity strategy for all levels in our organization, including senior management. Our VP, chief HR and diversity officer and DEI steering committee leads these efforts because we believe a diverse, equitable and inclusive workplace is vital to our long-term success.

Diversity starts at the top, and we are proud to have racially or culturally diverse individuals and women in leadership positions. In 2023 NW Natural Holdings' board received the highest gender diversity rating ("GB" for gender balanced) from 50/50 Women on Boards. In 2023, women held 45% of the seats on NW Natural Holdings' board of directors, and our board chair was a woman.

NW Natural Gender 2023	NW Natural Holdings' Board	Executive Management	Mid & Other Management	All Employees
Women	45%	42%	29%	29%
Men	55%	58%	71%	70%
Nonbinary	0%	0%	0%	<1%
Decline to Respond	0%	0%	0%	<1%

Women comprised 29% of NW Natural employees in 2023 compared to the national industry average of 21%[4] and NW Natural Holdings is one of only 8% of publicly traded companies to have a woman board chair.[5]

Board Demographics 2023	NW Natural Holdings	Russell 3000 Companies[6]
Percentage of board members that identify as racially or culturally diverse	27%	19%
Percentage of board members that identify as women	45%	29%
Percentage of women that hold C-suite positions[7]	46%	N/A

Increasing the diversity of our workforce through recruitment is a top priority at NW Natural. A significant focus is to understand and increase awareness of systems and structures that could limit representation and equity for prospective employees. We have a comprehensive approach that includes recruitment and hiring strategies, increasing our pool of diverse candidates through our community partnerships, and anti-bias training for HR and hiring managers. In 2023 we:

- Increased the diversity of NW Natural's construction team by 14% from 2018 to 2023; now 31% of employees on the team are from historically underrepresented groups.
- Offered full-time positions at NW Natural to 80% of participants in our 2023-2024 construction internship programs, all of whom are from historically underrepresented groups.
- Maintained strong affirmative action plans which have been in compliance with every federal audit since 2017.

> "Our interns are valued members of NW Natural. We aim to provide them with hands-on training and work experience that will support their chosen career path."
>
> — David Anderson, NW Natural CEO

Diversity-Focused Career Development

To serve our communities and promote diversity within our field workforce, we work to create employment opportunities for underserved populations. We launched an innovative construction intern program in 2018 to seek out high-quality prospective employees who might not have the background to qualify for, or even find out about, a well-paying construction job. Every year the program provides up to 12 interns with nine months of paid on-the-job training and practical work experience that can lead to full-time employment at NW Natural. All our 2023 Construction interns were diverse employees. In 2021 we began developing our Construction Field Services internship program and the first intern class of five began in 2023.

We are committed to partnering with career development organizations in our community, especially those focusing on women, culturally or racially diverse candidates, veterans, and individuals with disabilities. In 2023, we partnered with:

- Urban League
- Portland Pre-Apprenticeship Training and Program Consortium
- Oregan Tradeswomen
- Portland Community College
- National Association of Women in Construction
- INCIGHT
- Emerging Leaders

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Our Partners & Suppliers

We actively work to expand the diversity of our supplier network and increase our purchasing from businesses owned by women, veterans, and other traditionally underserved and underrepresented groups. Our supplier diversity webpage highlights opportunities for diverse businesses to work with us and helps them navigate the process of becoming a certified culturally or racially diverse business. We also encourage our suppliers to use diverse subcontractors while performing work on NW Natural's behalf.

Our CFO and our VP controller and treasurer works with our chief diversity officer to oversee our supplier diversity activities in procurement. Highlights from 2023 include:

- Implemented a new vendor management process to expand our supplier diversity program
- 34% of supplier requests for proposals (RFPs) included a diverse supplier, an increase of 8% from 2022
- 9% of our addressable purchasing spend is from diverse suppliers

WE PURCHASED

$39.6

MILLION

in goods and services from 116 verified culturally or racially diverse-, woman-, or veteran-owned businesses, a 26% increase from 2022

WE PURCHASED

$147.9

MILLION

from small businesses in 2023

Through our Sustainable Purchasing Program, we form strategic partnerships that help us build a more diverse supplier base. These relationships support the communities we serve. Our current partners include the Oregon Association of Minority Entrepreneurs, Prosper Portland, and Portland Means Progress.

We expect our suppliers to adhere to the standards set forth in our Supplier Code of Ethics, Human Rights Policy, and Environmental Policy. Our Corporate Purchasing and Expenditures Policy sets forth certain business requirements, including diversity, that we consider when reviewing purchase orders. When evaluating RFPs, we consider the prospective supplier's ability to help NW Natural achieve our business requirements along with our goals for supplier diversity, and we request information that includes the prospective supplier's certification as a culturally or racially diverse-owned, women-owned, underrepresented, or emerging small business, as well as its own diverse-supplier program and opportunities to use diverse subcontractors.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Human Rights, Equal Opportunity & Prohibition on Discrimination

We believe human rights are fundamental freedoms and standards of treatment to which all people are entitled. Our Human Rights Policy was reviewed and approved by our board of directors and articulates our commitment to identifying, preventing, and mitigating human rights risks, including: prevention of harassment and discrimination; commitment to diversity; freedom of association; safety and security; land rights and biodiversity; and prohibition of child or forced labor, among other things. We also maintain policies on equal employment opportunity and prohibition of discrimination and harassment, in keeping with our intention to foster a culture of inclusivity and support employees' right to work in an environment free of discrimination and harassment.

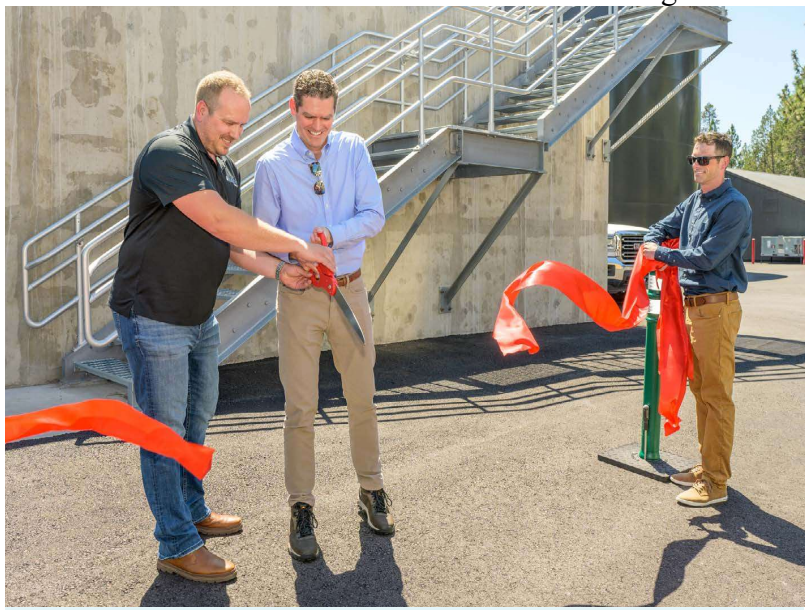
NW Natural WATER℠

Building on a Strong Foundation

NW Natural Water provides our service territories with financial, technical, and regulatory resources to help ensure safe, reliable, and affordable delivery of water and wastewater services to our customers every day. We are building on a strong foundation of superior customer service, environmental stewardship, and constructive regulatory engagement.

We've grown exponentially since NW Natural Holdings entered the water utility sector in December 2017. Through a deliberate and measured growth strategy, NW Natural Water has expanded its service territory to five states: Oregon, Washington, Idaho, Arizona, and Texas. In 2023, we acquired four more water and wastewater utilities. Since entering the sector, we have acquired more than 30 water and wastewater utilities and served over 73,000 connections at year end 2023. NW Natural Water is one of the 20 largest privately-owned water utilities in the U.S. based on customer count.

In 2023, we entered the operations and maintenance services businesses to support water and wastewater systems owners. We assist system owners by providing a range of services necessary to manage, operate, and maintain water and wastewater utilities. Our experienced personnel use an array of skills to assist in utility operations and to provide other business functions such as strategic planning, regulatory, customer service, and accounting assistance.



Upgrades at Sunriver Wastewater Treatment Plant Brings Water Quality to Class A Recycled Water

In 2023, NW Natural Water held a ribbon-cutting ceremony to celebrate the completion of a major upgrade to the Sunriver Water Wastewater Treatment Plant. This four-year, $18.5 million project enables the plant to treat an average of 1.5 million gallons of wastewater per day. This brings the water quality at the plant to a Class A reclaimed water profile, the Oregon Department of Environmental Quality's highest standard. Treated water from the plant also provides irrigation to nearby golf course, and byproducts create compost for the community.

> "Sunriver's Class A reclaimed water shows NW Natural Water's commitment to providing the highest standard of excellence to our customers and community."
>
> — Tim Smith, NW Natural Water
> Pacific Northwest regional manager

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural WATER™

Taking Rapid Action to Upgrade Critical Infrastructure

When NW Natural Water bought Foothills in October 2022, the company knew significant upgrades were needed to support the system and the growing Yuma, Arizona community it serves.

Right away in 2023, the team got to work and began major infrastructure upgrades on the wastewater plant. We're upgrading and adding membrane bioreactors, which improves our treatment process. Our Class A effluent discharge from the plant is used for irrigation at the adjacent golf course.

New remote-read smart meters are being installed, which provide more accurate usage data and allow for utility and customer access to leak detection capabilities. That's particularly important in dry regions like Yuma, Arizona. Upgrades also include structural projects and odor control system improvements.

> "The comprehensive upgrades at Foothills include important projects that allows us to provide clean water and reliable service to our customers. These upgrades wouldn't be possible without NW Natural Water."
>
> — Ed Fortner, NW Natural Water Southwest regional manager

Cleaner, Safer & More Reliable Service

Investing in new infrastructure and meeting customer needs safely and efficiently requires significant resources. We regularly invest in infrastructure improvements and safety measures that can be out of reach for smaller, stand-alone water utilities. In 2023, we continued to invest in safety, system reliability and information technology with spend totaling over $37 million with plans to invest $120 – $140 million in capital expenditures through 2028. In 2023 we:

- **Completed a major four-year, $18.5 million upgrade to the Sunriver Water wastewater treatment plant** to create a state-of-the-art facility that can now process 1.5 million gallons of Class A recycled water daily. This is the Oregon Department of Environmental Quality's highest standard for recycled water.
- **Launched a major infrastructure enhancement project at our Foothills wastewater plant.** Upgrades include the addition of membrane bioreactors, new advanced odor control systems, structural upgrades, and a system-wide installation of remote-read smart meters with leak detection.
- **Made broad investments in backup generation** to keep electric- driven equipment operating in the event of a power outage.
- **Contributed infrastructure capital to bring on new wells—** one of the most involved and expensive projects in the water business.
- **Invested in technology to prevent business disruptions.** We continued implementing supervisory control and data acquisition (SCADA) systems at all our water utilities, making it possible to proactively detect leaks and pressure drops.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural WATER™

Investing in Safety

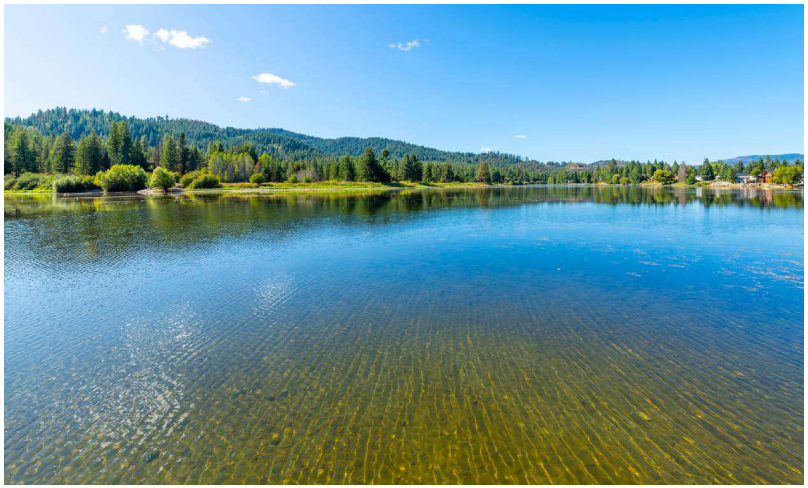
As our water business has grown, we have created a comprehensive safety program to help our NW Natural Water utilities all meet the same high health and safety standards to protect our employees and communities. To build that culture and standard of safety, we've implemented formalized safety practices and training that we are continually integrating throughout the workplace. Building a comprehensive safety program from the ground up is typically a long and challenging process, but we have been able to make swift, steady progress with the support from our experienced safety team. In 2023, the fourth year of our NW Natural Water safety program, we undertook the following measures:

- Hired a full-time Safety Environmental Program Manager to oversee our safety program
- Created a safety manual of standardized safety requirements and guidelines for all our utilities
- Increased our data collection to understand our safety needs

Environmental Stewardship

Water is a precious resource, and we're committed to using it wisely.

- **We strive to operate and maintain high-quality** water and wastewater systems so our facilities deliver safer and cleaner water to our customers.
- **We engage in comprehensive planning** to support investments in infrastructure and technology that are resource-efficient, cost-effective over their lifecycle, protective of the environment, and consistent with the goals of our communities.
- **We invest in critical infrastructure** that's essential for meeting water quality regulations. For example, across our water utilities we've invested in new wells, valves, pressure regulating valves, water mains, and technology like SCADA and geographic information systems (GIS) that help us maintain water quality by detecting and preventing low-pressure events that can lead to contamination.
- **At our wastewater treatment plants,** we strive to meet the highest standards for environmental sustainability. We continue to install SCADA systems at lift stations to help prevent wastewater overflow and protect lakes, rivers, and streams.
- **We look for opportunities to implement water reuse strategies** in areas of limited supply—a practice we believe is good business as well as our responsibility to the environment. For example, at our Sunriver and Foothills utilities, we reuse treated wastewater for secondary irrigation on golf courses within the community, and Sunriver's byproducts are used in compost for sale to the local community.
- **We are resolutely focused on reducing water loss, conserving water, and preventing waste.**
  - » We have installed technology to help minimize water leakage across our infrastructure. Our water utilities now have tools to perform water-loss analysis.
  - » We encourage customers to reduce water use. Our water utilities feature water conservation tips on their websites and encourage customers to use water-saving household fixtures. Sunriver Utilities provides low-flow faucet kits at no cost for homeowners who want to conserve water.
  - » Many of our water utilities have also adopted measures designed to reduce the amount of water used by residential customers who consume the highest percentage of water. In certain cases, we work directly with heavy water-users to help them reduce their consumption.



Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Partnering with our Communities

Every year treated wastewater from our Sunriver Environmental plant irrigates a bountiful crop of orchard grass hay. In 2023 the utility donated the entire crop—52 tons of hay—to nearby organizations including two 4-H clubs. 4-H provides opportunities for youth, from kindergarten through high school, to acquire life skills through hands-on learning. 4-H members and volunteers can engage in more than 20 areas of interest including food and nutrition, animal science, art, gardening, and more.

Additionally in 2023, Sunriver partnered with the Ponderosa Project, which aims to repopulate Ponderosa Pine trees to their native ecosystem. Sunriver provides space at their compost site to plant and irrigate seedlings. Employees also support the Ponderosa Project by volunteering at youth workshops.

"At Sunriver, we have so much pride for our community and we aim to support a variety of causes."

— Tim Smith, NW Natural Water Pacific Northwest regional manager

Communities & Customers

Our customers are our community, and we are committed to serving and supporting them. We work with all our utilities to understand what makes their customers and communities unique.

CUSTOMER EXPERIENCE: We partner with community-oriented water utilities that are dedicated to serving customers, and we're committed to preserving and building on that legacy. We have enhanced the online experience people have when they do business with our utilities, with updated and standardized websites where customers can pay their bills and get instant access to features and information, including water quality (consumer confidence) reports, rate structure, a "call us" button, and water-emergency resources.

BILL PAYMENT ASSISTANCE: To support people experiencing financial hardship, we offer time payment agreements that allow customers in need to pay a portion of their bill in installments.

ENGAGEMENT: With deep roots in the communities they serve, our water and wastewater utilities work diligently to meet their customers' needs, understand their stakeholders' concerns, and operate as good neighbors. Our water and wastewater companies support a range of local nonprofits, and they solicit community input on important matters such as rate cases and infrastructure upgrades.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

People & Culture

Attracting and retaining a talented workforce is vital to the success of NW Natural Water, and we continuously look for ways to meet the needs of the dedicated employees who keep our water businesses running smoothly. In 2023, all active NW Natural Water employees completed our annual ethics and compliance training in support of a culture that seeks to promote integrity and ethical behavior. In 2023, NW Natural Water conducted its third employee engagement survey, and 87% reported that they take pride in their work at the company. In addition, 87% of NW Natural Water employees described themselves as engaged.

Additionally, NW Natural Water strives to offer competitive total compensation packages[1] designed to attract and retain employees and meet the needs of our workforce. We continuously look for ways to enhance employees' physical, psychological, and financial well-being. This is reflected in the programs we offer to meet the needs of employees and help them care for their families.

65% of Water employees participated in the 2023 survey

91% of employees feel their work area operates with integrity and ethical conduct

82% of employees feel like they are valued

91% feel that all employees are treated fairly and included regardless of race, gender, sexual orientation, age, disability, religion, ethnicity and/or interests

Employee Benefits

HEALTH COVERAGE FOR ALL FULL-TIME STAFF: We provide medical, dental, vision, and prescription insurance options for employees and eligible dependents. We also offer an optional Flexible Spending Account.

FINANCIAL WELLNESS: We provide a 401(k) with employer match.

INSURANCE: We provide life insurance, accidental death & disability, short- and long-term disability insurance to employees. We also offer voluntary accident insurance to employees.

GENEROUS VACATION AND HOLIDAYS: Full-time employees receive 15 days of paid time off (PTO) per year at the start of service and 30 days of PTO per year at 20 years of service. Additionally, full-time employees receive 9 paid holidays and 4 floating holidays per year.

EMPLOYEE ASSISTANCE PROGRAM: Our employee assistance program is a free and confidential consulting-and-advice benefit that provides resources and services to employees.

Employee-Led Engagement Opportunities

NW Natural Water employees have the option to connect with their peers through employee-led engagement opportunities, employee resource groups, special interest groups, and company events. We aim to create a culture of belonging for all employees of NW Natural Holdings.

> "I am proud to work alongside such passionate people that represent NW Natural Water to the fullest."
>
> — Justin Palfreyman, NW Natural Holdings president

[1] Our package options vary depending on date of hire and whether the employee is full-time or part-time. Terms of benefits may differ based on U.S. state.

NW Natural Renewables

NW Natural Renewables is committed to leading in the energy transition by providing renewable fuels to support decarbonization efforts in the utility, commercial, industrial, and transportation sectors.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

NW Natural Renewables

Building on a long-standing vision of a lower-carbon future, we launched a renewable fuels business in 2021. As a subsidiary of NW Natural Holdings, NW Natural Renewables' mission is to support the energy transition through the supply of net lower-carbon fuels to the utility, commercial, industrial and transportation sectors. Our experienced team is focused on providing decarbonization solutions by using waste streams and more environmentally conscious energy sources to supply renewable natural gas (RNG) and provide these customers with additional emissions-reducing solutions. These efforts are separate from and in addition to NW Natural's gas utility efforts related to RNG and hydrogen.

Our country and region are in the early stages of a historic energy transition, and we project the demand for renewable fuels will only continue to grow. We are positioning our business to help NW Natural Renewables' partners achieve their decarbonization goals and drive down emissions.

In November 2021, we announced our first project with EDL, a leading global producer of sustainable distributed energy. NW Natural Renewables has contracted to provide approximately $50 million toward the development of two production facilities that are designed to convert landfill waste gases to RNG and connect that production to the existing regional pipeline networks. In 2023, construction was completed on the two facilities. We expect the facilities to be operational in 2024.

NW Natural Renewables and EDL executed agreements designed to obtain a 20-year supply of RNG produced by the facilities for NW Natural Renewables. Separately, we have contracted to sell an equivalent amount of fixed-volume RNG supply to investment grade counterparties under long-term, primarily fixed-price contracts.

We are excited about pursuing opportunities to move toward a lower-carbon energy future, and we remain focused on advancing other RNG investments that support this important transition.

> "I am excited about the future of NW Natural Renewables, and we look forward to providing a lower-carbon solution to meet both our partners' energy needs and the needs of our shared environment."
>
> — Anna Chittum, NW Natural Renewables president

Limestone RNG Facility, one of our first projects with EDL

Lorain RNG Facility, one of our first projects with EDL

Governance

Strong corporate governance and integrity form the foundation for everything we do. Our board strives to adopt and maintain appropriate corporate governance practices. And we expect our employees to do what is right for our stakeholders, conduct business ethically, act with accountability, and work with business partners who share our high standards and principles. Our 2024 Proxy Statement provides a full discussion of our governance practices.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Governance Highlights

Board of Directors

- Maintain a well-qualified, diverse and active board of directors
- Determine independence of directors (11 of 12 directors meet independence criteria)
- Engage in robust succession planning process supporting board refreshment (one-half of our directors are new within the last five years) as of September 1, 2024
- Separate roles of chair and CEO under current leadership structure
- Hold regular executive sessions of non-management directors
- Oversee company's risk management programs and policies
- Evaluate full board of directors, committees and individual directors on an annual basis
- Provide comprehensive director orientation and continuing education to enable directors to develop and maintain skills necessary or appropriate for the performance of their duties

Other Governance Practices

- Maintain stock-ownership guidelines
- Maintain insider trading policy applicable to directors, officers and employees, agents, advisors and independent contractors
- Maintain a hedging and pledging policy applicable to directors and officers
- Maintain a Clawback Policy and incorporate into annual and long-term cash and equity i ncentive awards

Business Integrity & Ethics

- Maintain and promote an active ethics and compliance program
- Foster a culture that mitigates risk and promotes ethical behavior and integrity
- Recognized by Ethisphere® as one of the 2024 World's Most Ethical Companies®, the third consecutive year earning this award[1]

[1] "World's Most Ethical Companies" and "Ethisphere" names and marks are registered trademarks of Ethisphere LLC

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Governance Practices

Board of Directors

The board of directors of NW Natural Holdings establishes policies designed to promote management of our business, to serve our stakeholders and maximize long-term shareholder value, that we conduct our business in compliance with all applicable laws and regulations, and that we do so with the highest standards of integrity. For complete information on our approach to corporate governance, please visit the governance portion of our website at nwnaturalholdings.com. The following sections highlight our approach to corporate governance.

Board Composition & Refreshment

The board is responsible for selecting candidates for board membership, and the Governance Committee has been assigned the responsibility of recommending nominees to the board of directors for election as directors.

The Governance Committee reviews director nominees in the context of the current composition and diversity of the board, the operating requirements and existing and prospective business environment faced by NW Natural Holdings, NW Natural Holdings' business strategy, and the long-term interests of shareholders. Director candidates must be able to make a significant contribution to the governance of NW Natural Holdings by virtue of their business and financial expertise, educational and professional background, and current or recent experience as a chief executive officer or other senior leader of a public company or other relevant organization.

The business discipline that may be sought at any given time will vary depending on the needs and strategic direction of our company and the disciplines represented by our incumbent directors. In addition, the Governance Committee looks at the overall composition of the board and how a candidate would contribute to the overall synergy and collaborative process of the board. In conducting its assessment, the Governance Committee considers a variety of criteria, including, but not limited to, the candidate's integrity, reputation, judgment, knowledge, experience, commitment, skills, diversity, and independence.

In recent years, the board undertook a comprehensive succession planning and refreshment review in anticipation of the retirements of several long-tenured directors. In line with those plans, the board has undergone substantial refreshment in recent years, with 6 of the 11 current independent directors being added to the board in the last five years. Our Corporate Governance Standards provide for several mechanisms to encourage director refreshment, including: annual peer reviews of individual directors, a requirement to offer notice of resignation upon a change in principal position, and a mandatory retirement age of 75.

NW Natural HOLDINGS™

COMMITMENT TO DIRECTOR INDEPENDENCE

The board of directors of NW Natural Holdings has adopted director independence standards that comply with New York Stock Exchange (NYSE) rules. The board of directors has affirmatively determined that 11 out of 12 directors are independent, according to NW Natural Holdings' director independence standards as well as additional qualifications prescribed under the listing standards of the NYSE and applicable state and federal statutes. All standing committees of the board are chaired by and currently comprised of independent directors. The current board leadership structure also separates the roles of chair and CEO and is designed to promote independence between board and management. Additionally, to support independence, the directors of the board meet regularly in executive sessions at which the independent board chair presides and only the non-management directors are present.

COMMITMENT TO BOARD DIVERSITY

NW Natural Holdings' Director Selection Criteria include a consideration of diversity as a factor in evaluating candidates for board membership. The board believes that diversity with respect to factors such as background, experience, skills, geographic location, race, gender, ethnicity, culture, veteran status, age, disability, and sexual orientation are important considerations in board composition. The Governance Committee discusses diversity considerations in connection with each director candidate, as well as on a periodic basis in connection with the composition of the board as a whole. In addition, the Governance Committee and the board conduct formal self-evaluations each year that include an assessment of whether the Governance Committee and the board have adequately considered diversity, among other factors, in identifying and discussing director candidates. Currently, of 12 members of our board, six directors identify as women, including our board chair, and three directors identify as racially or culturally diverse. Our composition of women on our board has earned a "Winning Company" award three times from 50/50 Women on boards, which described the board's gender diversity as a "shining example of enlightened business leadership." In 2023 our board received the highest distinction for Gender Balanced. In addition, two thirds of the leadership roles on our board are held by women, including the board chair and three out of five committee chairs.

BOARD EXPERIENCE

NW Holdings' board consists of 12 directors with extensive professional experience and a diverse array of skills. This diversity of experience provides our board with a collective skill set that is advantageous to the board's oversight of our business and operations. In addition to the qualifications required of all directors that are set forth in NW Holdings' Director Selection Criteria, our board members have experience in climate change and decarbonization, cyber and IT, risk management, and more. More information on board experience can be found in our 2024 Proxy Statement.

Board's Role in Risk Oversight

Management is responsible for managing the day-to-day risks faced by the company, while the board of directors, collectively and through its committees, has responsibility for the oversight of risk management.

The Corporate Governance Standards describe the board's primary responsibilities, which include oversight of NW Natural Holdings' mission, and key programs that enable the board to assess and manage material risks, including, but not limited to, risks related to business continuity and disaster response, gas supply, distribution and storage operations, product safety, strategic planning and business development, environmental and climate change matters, business improvement and information technology, cybersecurity, customer demand and market competition, economic environment, effective governance, legislative and regulatory risk and compliance, state and federal regulatory process and environment, financial performance, business integrity and compliance, financial reporting and internal controls, financing programs, pensions and retirement plans, reputational risk, human capital management, compensation and employee benefits, succession planning (including the CEO), human risks such as safety and diversity, equity and inclusion matters, environmental, social and governance matters and company culture. The board periodically reviews its committee oversight authority to ensure the board has adequate visibility and oversight of the company's key areas of risk to execute its responsibilities. Appropriate members of management serve as liaisons to board committees, attend board and committee meetings, and regularly discuss with the board and the committees various risks confronting the company.

An important aspect of the board's oversight role is the comprehensive enterprise risk management process, under which significant enterprise-wide risks have been identified and assessed with respect to likelihood of occurrence, potential impact on the business, and likely speed of onset, along with the mitigative measures to address and manage such risks. The enterprise risk management process allows the board to remain informed of risks, developing trends, or potential problems that might require their attention. Management conducts the enterprise risk management process annually with periodic interim updates and discusses those findings with the board and reports regularly to the board on significant risk categories. Additional review or reporting on enterprise risks is conducted as needed or requested by the board. The board and management consider enterprise risks and opportunities in their strategic and capital spending decision process and in their governance and oversight responsibilities.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Board Structure & Function

COMMITTEES

There are five standing committees of the board: Audit, Finance, Governance, Organization and Executive Compensation Committee (OECC), and Public Affairs and Environmental Policy. Each of the standing committees operates according to a formal written charter, all of which are reviewed annually and are available at nwnaturalholdings.com. Each committee is comprised entirely of independent directors.

BOARD AND COMMITTEE OVERSIGHT

The full board considers key risks, issues and initiatives. Board committees additionally have primary responsibility and oversight with respect to the following areas:

Audit Committee

- Oversight and evaluation of policies with respect to significant risks and exposures and the procedures for assessing, monitoring and managing those risks.
- Oversight of accounting, financial reporting, internal controls, auditing, information technology systems and cybersecurity, enterprise risk management process, business continuity and disaster planning, capital projects and contingencies, and material litigation.
- Oversight of business compliance and integrity program, including Code of Ethics, and the company's system for review and treatment of integrity hotline complaints.

Public Affairs and Environmental Policy Committee

- Oversight of legislative and regulatory matters and policies and practices on public and political issues, including charitable and political contributions and budgets.
- Oversight of current and emerging political and societal trends.
- Oversight of programs and policies relating to civic affairs, human rights, charitable and community affairs, safety, diversity, equity and inclusion, equal employment opportunities, employee well-being, customer engagement and other corporate social responsibility matters.
- Review and recommendation of environmental matters and policies and sustainability efforts.
- Review of major environmental risks and plans for managing those risks.

Finance Committee

- Oversight of financing programs, budgets and forecasts, financial policy matters, including hedging policies and practices, economic environment, gas supply and pricing, including liquidity and cash flow impacts, and carbon credit pricing and procurement, and material regulatory issues, including regulatory policy related to financial strategy and policy, capital structure and dividend policy.
- Oversight of investor relations program, and credit agency and New York Stock Exchange relationships.
- Financial oversight of pension and retirement plans.
- Review and recommendation of finance aspects of corporate development strategies.

Organization and Executive Compensation Committee

- Oversight of company's human capital management.
- Review and recommendation of plans and preparations for talent succession and management of risks associated with transfer of knowledge and expertise.
- Recommendation of executive compensation programs and benefit plans to the board, as well as monitoring of risks and alignment of incentives related to such plans and programs.
- Review and approval of grants under equity incentive plans to eligible employees.
- Primary responsibility for ensuring executive compensation programs and plans are consistent with corporate objectives and OECC's compensation philosophy.

Governance Committee

- Recommendations to the board regarding nominees for election to the board, and committee composition and structure.
- Establishment of criteria for board and committee membership and policies that govern the board's activities.
- Review and recommendation of governance policies and structure, including the Corporate Governance Standards, to the board.
- Evaluation of board and individual director performance and oversight of director onboarding and continuing education.
- Oversight and consideration of plans and preparations for board succession.
- Oversight of director and executive stock ownership guidelines and ownership levels.
- Oversight of integrated environmental, social and governance matters.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

MANAGEMENT LEADERSHIP

Our executive leadership team is responsible for leading and managing our business and for developing and executing company strategy as approved by the board, and meets regularly to actively monitor operations, financial performance, and legal, regulatory, policy and other external developments; ensure compliance with policies, procedures and ethical business practices; identify, assess and manage company risks and opportunities; and develop and implement strategy to achieve sustainable, long-term performance. Each member of our executive leadership team has identified goals in support of sustainable, long-term business performance, with a portion of their compensation tied to the achievement of these goals. We have a diverse executive team and have expanded the number of women in leadership positions. Today, our 15-person executive leadership team includes six women.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

ESG Governance & Oversight

While our executives are responsible for day-to-day management and leadership of the company, the board of directors has responsibility for oversight of management and its development and implementation of company strategy, including ESG matters and risks and opportunities, including those related to climate and cybersecurity. The Governance Committee oversees the company's integrated ESG strategy and reviews its full board and committee oversight authority to ensure that the board has adequate visibility and oversight to execute its responsibilities. In order to assist the Governance Committee in its ESG oversight responsibilities, management provides formal ESG updates to the Governance Committee at each regularly scheduled meeting (approximately five times per year). In addition, appropriate members of management serve as liaisons to board committees, attend board and committee meetings, and regularly discuss with the board matters relevant to the company, including ESG matters and the company's risks and opportunities. Areas of ESG oversight include, but are not limited to:

Audit

- Business Integrity
- Whistleblower Hotline
- Enterprise Risk Management
- Business Continuity
- Significant Legal Matters
- Internal Controls Over Financial Reporting
- SEC Reporting Oversight
- Cybersecurity and IT

Board

- Decarbonization; Including Low Carbon Pathway and Vision 2050
- Customer Preference/Satisfaction
- Tone at the Top
- Operational and Business Development Initiatives (e.g., Water and RNG)
- Other Natural Gas Applications
- Strategic Matters
- Pipeline Safety

Public Affairs and Environmental Policy

- Employee Safety
- Diversity, Equity and Inclusion
- Employee Engagement and Well-Being
- Civic and Human Rights
- Environmental and Sustainability
- Community and Public Relations
- Charitable Giving and Political Contributions
- Legislative and Regulatory Matters
- Employee Satisfaction
- Procurement
- Customer Metrics, Engagement and Affordability Considerations

Organization and Executive Compensation

- Compensation and Benefit Programs, Including Alignment of Incentives with ESG
- Talent Strategy and Succession
- CEO Succession
- Labor Relations
- Employee Attrition Rates

Governance

- Board Structure, Policies, Governance and Expectations
- CEO and Board Succession Planning
- Board Composition, Diversity and Independence
- Board Evaluations
- Committee Oversight Roles/Responsibilities
- Continuing Board Education and Training
- ESG Strategy

Finance

- Financial Policies and Matters That May Have ESG Implications
- Investor Relations
- Goal Setting and Performance Metrics
- Rating Agency Relationships
- Capital Markets/Green Financings
- Carbon credit pricing and procurement
- Investment in Key ESG Improvements

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Management ESG Leadership

Each member of our executive leadership team is responsible for developing and implementing our business strategy and lead areas that are considered ESG. For example, our VP and chief public affairs and sustainability officer leads our environmental management and sustainability, legacy environmental programs, community and government affairs and community involvement teams. She also leads teams focused on procuring renewable natural gas and pursuing hydrogen gas initiatives. Our VP, chief human resources and diversity officer leads our safety, employee and labor relations, organizational effectiveness, diversity, equity and inclusion and human resources and benefits teams. Our VP, chief compliance officer and corporate secretary leads our governance and business integrity and compliance teams and co-leads our ESG Steering Committee, a cross functional group of executives and senior management that meets regularly to discuss the company's ESG strategy, implementation and disclosure. Each of these officers report directly to the CEO or president and serves as an executive liaison to a relevant committee of the board of directors. Also reporting directly to our president, our SVP and chief operating officer heads our efforts to pursue a lower-carbon pathway. Our VP, treasurer, chief accounting officer and controller oversees our sustainable financing and sustainable procurement efforts. And, our VP and chief information officer, leads our cybersecurity and compliance, and information technology (IT) teams. Each of our executive leaders has identified goals in support of sustainable, long-term business performance attentive to ESG matters, with a portion of their compensation tied to the achievement of these goals. Our 15-person executive leadership team meets regularly to discuss the development and implementation of company strategy, including sustainability matters.

Stock Ownership Requirements

To closely align director interests with shareholder interest, the board has adopted stock-ownership guidelines that require directors to own NW Natural Holdings shares of at least $450,000 in value within five years of joining the board. Similarly, executive officers are required to hold stock at a dollar value that is a multiple of base salary, with the CEO holding five times their annual salary, the president holding four times their annual salary, executive vice president or chief operating officer holding three times their annual salary, senior vice presidents or named executive officers holding two times their annual salary and vice presidents holding one times their annual salary.

Insider Trading

To foster integrity in trading in NW Natural Holdings stock, the company maintains an insider trading policy that specifies that if a director, officer, any employee of NW Natural Holdings or its subsidiaries, has material nonpublic information relating to the company, it is the company's policy that neither that person nor any related person may buy or sell securities of the company or engage in any other action to take advantage of, or pass on to others, that information.

Policy on Hedging & Pledging of NW Natural Holdings Securities

NW Natural Holdings has adopted a policy on hedging and pledging of securities that prohibits the directors and executive officers of the company and its subsidiaries from engaging in any short sales, zero-costcollars, or forward sale contracts with respect to the company's securities, or purchasing or selling puts, calls, options, or other derivatives securities based on the company's securities. In addition, the policy restricts the ability of directors and executive officers to pledge their ownership of company securities in a non-recourse loan, failing to meet a margin call with respect to a margin account resulting in the sale of company stock, or buying company securities on non-recourse margin.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Business Integrity

Since 1859, NW Natural has been viewed as a respected leader in Oregon and SW Washington. We could not have maintained this reputation for over 165 years without one fundamental characteristic—integrity. Our customers trust us to provide them with essential energy and deal with them fairly, in a caring and equitable fashion. Our business integrity program aims to reinforce our core values in our everyday work.

We are honored to have been recognized as one of the 2024 World's Most Ethical Companies® by Ethisphere[1], a global leader in defining and advancing the standards of ethical business practices. It is the third year NW Natural Holdings has been recognized and the company is one of only eight honorees in the Energy & Utilities industry. In all, 136 honorees from 20 countries and 44 industries were recognized for their commitment to ethical business practices through programs that positively impact employees, communities, and broader stakeholders.

Oversight of Business Integrity Program

Our Business Integrity program is overseen by the Audit Committee of the board of directors and is managed on a day-to-day basis by our business integrity team, which is a cross-functional team led by our chief compliance officer and consisting of members of the internal audit, legal and human resources departments. Our chief compliance officer and director of internal audit each regularly provide updates on business integrity matters to the Audit Committee of the board of directors, including updates on business integrity reports, management actions, training, outreach and other integrity initiatives, business integrity trends and updates, and benchmarking analysis.

Code of Ethics

We maintain a Code of Ethics that applies to all of our employees, including supervisors, managers and officers, as well as to our board of directors and other agents, vendors and business partners working on our behalf. Our Code of Ethics is intended to set expectations for conduct that is consistent with our core values; help promote compliance with laws and NW Natural policies; establish our high standards of integrity; and provide information about how to resolve real-life questions or concerns. Employees are required to annually certify their commitment to the principles outlined in the Code of Ethics and disclose any business integrity concerns. Our Code of Ethics is approved annually by the board upon the review and recommendation of the Audit Committee.

Code of Ethics Training & Communications

To reinforce the company's core value of integrity, every employee and director completes an annual online Code of Ethics training to refresh their understanding of the company's Business Compliance and Integrity Program and Code of Ethics. NW Natural's program received the national award for Best Ethics and Compliance Program (Small and Mid-Cap) at the 2018 Corporate Governance Awards event, in recognition of its new Code of Ethics document and refreshed online training and certification program. The Code of Ethics training covers a number of topics including, but not limited to conflicts of interest, non-retaliation, anticorruption/ anti-bribery, fair business dealings, compliance with laws, government relations, confidentiality, politics in the workplace, and social media, among other things.

In 2023, 100% of our active employees participated in our annual ethics and compliance trainings. We also regularly provide specialized live training to help managers and supervisors navigate pertinent business integrity questions and emphasize their role as the front line of integrity at NW Natural and the resources available to them.

We reinforce our annual Code of Ethics and information security trainings with periodic communications spotlighting pertinent business integrity topics and messages from senior leadership. We also provide additional resources to employees via an internal intranet page dedicated to business integrity.

[1] "World's Most Ethical Companies" and "Ethisphere" names and marks are registered trademarks of Ethisphere LLC

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

Reporting, Investigations & Actions

We maintain our Integrity Hotline to empower employees, shareholders, customers, the public and other third parties to raise issues or submit concerns anonymously at 1-866-546-3696 or NWNIntegrity.com, which is managed by a third party and is available through our external and internal websites. Our hotline offers employees and others the opportunity to anonymously ask questions about ethical decisions. We also provide several other avenues to raise issues or report concerns in addition to our hotline.

Our chief compliance officer and our director of internal audit handle matters reported on the hotline and through other reporting avenues. Both regularly report to the Audit Committee regarding hotline activity.

NW Natural is committed to investigating all potential violations of law, company policy or business integrity and handling each report fairly and reasonably. In 2023, we received 37 interactions with our hotline and other business integrity reporting channels (approximately 2.7 per 100 employees), of which 23 (approximately 1.7 per 100 employees) were determined to involve business integrity reports. Business integrity reports are reviewed by our Business Integrity team and investigated as necessary with assistance from the company's internal audit, human resources, legal, or other departments and/or other internal or external resources as appropriate under the circumstances, depending on the type and nature of the allegation. When violations are detected, appropriate actions are taken, which may include coaching or counseling, administering disciplinary action, up to and including termination and/or improvements to our policies, procedures or practices.

We maintain a Violation Reporting Policy, approved by the Audit Committee of the board of directors, that prohibits retaliation and offers protections for individuals that make good faith reports of possible violations of the Code of Ethics, company policy or law or who participates in an investigation in good faith. Employees who have engaged in retaliation may face disciplinary action, up to and including termination. We proactively communicate our prohibition on retaliation in multiple forums including our annual Code of Ethics Training, manager trainings, integrity website and periodic communications to employees.

Evaluation & Continuous Improvement

We strive to evaluate the effectiveness of our program on a regular basis. As part of this process, we monitor relevant business integrity risks, legal updates, hotline reports, investigation results and survey data, among other things. We also review compliance best practices and periodically benchmark our business integrity program against other companies. These activities help inform priority areas for training, communications and other program initiatives.

Supplier Code of Ethics & Fair Business Dealings

We seek to do business with organizations and service providers that embrace our core values, including integrity. We maintain a Supplier Code of Ethics, which is available on our supplier website and sets forth our expectations for our suppliers in areas of ethics and compliance, safety, human rights, and diversity, among other things. Under the Supplier Code, suppliers have a responsibility to report any suspected illegal or unethical conduct involving NW Natural or its business partners, and the company's business integrity hotline is available to suppliers and other third parties to anonymously report concerns. We monitor key suppliers on an ongoing basis and have implemented a scorecard for certain vendors that considers whether such vendor operated in accordance with our core values in doing business with us.

As set forth in our Code of Ethics, we strive to deal fairly and in good faith with NW Natural's customers, shareholders, employees, regulators, suppliers, competitors and others. We strive to avoid any attempt to take unfair advantage of any person through manipulation, misrepresentation, fraud, misuse of confidential information or any other unethical dealing, practice or act. Our Code of Ethics sets forth our policies and expectations regarding fair business dealings, including our expectations regarding expenses, purchasing and contracting, gathering competitive data, and engaging in transactions between utility and non-utility subsidiaries. Our Code of Ethics also sets forth our strict prohibition on bribes and kickbacks. In 2023, we received zero substantiated reports of bribery or corruption through our Integrity Hotline.

2023 Sustainability Accounting Standards Board (SASB)

For the year ended Dec. 31, 2023

The following index sets forth Northwest Natural Holding Company's SASB reporting disclosures for our primary industry, Gas Utilities & Distributors. While we report information on nearly all of SASB's metrics, we may report a different unit of measure, different metric, or partial information for the topic area or accounting metric as noted. Unless otherwise noted, data in the below SASB disclosure is as of, or for the year ended December 31, 2023.

Gas Utilities & Distributors Accounting Standard

ENERGY AFFORDABILITY		
SASB CODE	**ACCOUNTING METRIC**	**2023 DISCLOSURE RESPONSE**
IF-GU-240a.1	Average retail gas rate for residential customers[1] per MMBtu	$13.76
	Average retail gas rate for commercial customers[1] per MMBtu	$11.64
	Average retail gas rate for industrial customers[1] per MMBtu	$9.35
	Average retail gas rate for transportation services[1] per MMBtu	$2.12
IF-GU-240a.2	Typical monthly gas bill for residential customers for 50 MMBtu of gas delivered per year[2] (USD)	$63.01
	Typical monthly gas bill for residential customers for 100 MMBtu of gas delivered per year[2] (USD)	$120.37
IF-GU-240a.3	Number of residential customer gas disconnections for nonpayment, percentage reconnected within 30 days	Approx. 8,535 within 20 days[3]
	Percentage of residential customer gas disconnections for nonpayment reconnected within 30 days	57% reconnected within 20 days[3]
IF-GU-240a.4	Discussion of impact of external factors on customer affordability of gas, including the economic conditions of the service territory	2023 Community & Sustainability Report, "Customers & Community"

[1] Weighted average rates from 11/1/22-10/31/23.
[2] Based on weighted average rates for the heating year beginning 11/1/2022 and ending 10/31/2023.
[3] NW Natural reports reconnections within 20 days rather than 30 days, consistent with our internal practice regarding measurement and reporting of reconnections.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

END-USE EFFICIENCY		
SASB CODE	**ACTIVITY METRIC**	**2023 DISCLOSURE**
IF-GU-420a.1	Percentage of gas utility revenues from rate structures that are decoupled	77%
	Percentage of gas utility revenues from rate structures that contain a lost revenue adjustment mechanism	0%
IF-GU-420a.2	Customer gas savings from efficiency measures by market (MMBtu)	Oregon: 549,258 Washington: 27,287

INTEGRITY OF GAS DELIVERY INFRASTRUCTURE		
SASB CODE	**ACTIVITY METRIC**	**2023 DISCLOSURE**
IF-GU-540a.1	Number of federally reportable pipeline incidents	0
	Number of federal corrective action orders	0
	Number of federal notices of probable violation	0
IF-GU-540a.2	Percentage of distribution pipeline that is cast and/or wrought iron	0%
	Percentage of distribution pipeline that is unprotected steel	0%
IF-GU-540a.3	Percentage of gas transmission pipelines inspected	75% as of December 31, 2023[4]
	Percentage of gas distribution pipelines inspected	20%[5]
IF-GU-540a.4	Description of efforts to manage the integrity of gas delivery infrastructure, including risks related to safety and emissions	2023 Community & Sustainability Report, "Safety & Reliability", "Environmental Stewardship"

[4] Pipeline inspected through December 31, 2023, but not limited to inspections during the calendar year 2023. As of December 31, 2023, we inspected 70% of our pipeline, 2.5 times the number required by 49 CFR 192.903 and reassess covered pipelines every seven years as set forth in 49 CFR §192.939(6) by the Pipeline and Hazardous Materials Safety Administration (PHMSA).

[5] We strive to perform a leak survey on 20% of our gas mains annually, with every gas main surveyed at least every five years. We also strive to perform leakage and atmospheric corrosion surveys every three years on residential service lines and annually in business districts and high-occupancy buildings.

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

ACTIVITY METRICS		
SASB CODE	**ACTIVITY METRIC**	**2023 DISCLOSURE**
IF-GU-000.A	Number of residential customers served	728,915
	Number of commercial customers served	69,273
	Number of industrial customers served	1,062
IF-GU-000.B	Amount of natural gas delivered to residential customers (MMBtu)	45,570,284
	Amount of natural gas delivered to commercial customers (MMBtu)	28,005,196
	Amount of natural gas delivered to industrial customers (MMBtu)	17,931,727
	Amount of natural transferred to a third party (MMBtu)	29,160,138
IF-GU-000.C	Length of gas transmission pipelines	734 miles
	Length of gas distribution pipelines	14,419 miles

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

2023 NW Natural Workforce Statistics

The following table sets forth NW Natural's consolidated EEO-1 data as submitted for the payroll period 12/15/23 through 12/31/2023.

2023 American Gas Association (AGA) Voluntary Reporting Tool

Parent Company:	**NW Natural Holding Co.**
Operating Company(s):	**NW Natural**
Business Type(s):	*LDC*
State(s) of Operation:	**OR & WA**
Regulatory Environment:	*Regulated Utility*
Report Date:	*Sep-24*

Gas Company ESG/Sustainability Quantitative Information

Ref. No.	Refer to the "Definitions" column for more information on each metric.	Current Year 2023	Definitions
Natural Gas Distribution			
1	**METHANE EMISSIONS AND MITIGATION FROM DISTRIBUTION MAINS**		**All methane leak sources per 98.232 (i) (1-6) are included for Distribution. Combustion sources are excluded. CO2 is excluded.**
1.1	Number of Gas Distribution Customers	799,250	
1.2	Distribution Mains in Service		These metrics include all local distribution companies (LDCs) held by NW Natural that are above the LDC Facility reporting threshold for EPA's 40 C.F.R. 98, Subpart W reporting rule.
1.2.1	Plastic (miles)	7,885	
1.2.2	Cathodically Protected Steel – Bare & Coated (miles)	7,264	
1.2.3	Unprotected Steel – Bare & Coated (miles)	0	
1.2.4	Cast Iron / Wrought Iron – without upgrades (miles)	0	
1.3	Plan/Commitment to Replace / Upgrade Remaining Miles of Distribution Mains (# years to complete)		NW Natural has completed pipeline modernization system wide. As a result the values for these fields are all zero. Thorugh partnership with regulators The Company was able to accelerate replacement of cas iron and bare steel pipe. This has resulted in one of the lowest leaks per mile and provides opportunity for the company to pursue emisison reduction elsewehre in operations and along the supply chain.
1.3.1	Unprotected Steel (Bare & Coated) (# years to complete)	0	
1.3.2	Cast Iron / Wrought Iron (# years to complete)	0	
2	Distribution CO2e Fugitive Emissions		Fugitive methane emissions (not CO2 combustion emissions) stated as CO2e, as reported to EPA under 40 CFR 98, Subpart W, sections 98.236(q)(3)(ix)(D), 98.236(r)(1)(v), and 98.236(r)(2)(v)(B) – i.e., this is Subpart W methane emissions as input in row 2.2.1 below and converted to CO2e here. This metric should include fugitive methane emissions above the reporting threshold for all natural gas local distribution companies (LDCs) held by the Parent Company NW Natural that are above the LDC Facility reporting threshold for EPA's 40 C.F.R. 98, Subpart W reporting rule. Calculated value based on mt CH4 input in the 2.2.1 (below) and GWP of 25.
2.1	CO2e Fugitive Methane Emissions from Gas Distribution Operations (metric tons)	67,024	
2.2	CH4 Fugitive Methane Emissions from Gas Distribution Operations (metric tons)	2,678	INPUT VALUE (total mt CH4) as explained in definition above. Subpart W input is CH4 (mt).
2.2.1	CH4 Fugitive Methane Emissions from Gas Distribution Operations (MMSCF/year)	139	
2.3	Annual Natural Gas Throughput from Gas Distribution Operations in thousands of standard cubic feet (Mscf/year)	114,489,298	This metric provides gas throughput from distribution (quantity of natural gas delivered to end users) reported under Subpart W, 40 C.F.R. 98.236(aa)(9)(iv), as reported on the Subpart W e-GRRT integrated reporting form in the "Facility Overview" worksheet Excel form, Quantity of natural gas delivered to end users (column 4).
2.3.1	Annual Methane Gas Throughput from Gas Distribution Operations in millions of standard cubic feet (MMscf/year)	108,765	assumes 95% Methane content
2.4	Fugitive Methane Emissions Rate (MMscf of Methane Emissions per MMscf of Methane Throughput)	0.128%	$\frac{E_C}{TP_C} = \frac{tonnes\ CH_4}{MMscf\ gas} \times \frac{10^6\ g\ CH_4}{tonne\ CH_4} \times \frac{g\ mole\ CH_4}{16\ g\ CH_4} \times \frac{gmol\ Nat.Gas}{0.95\ gmol\ CH_4} \times \frac{scf\ gas}{1.198\ gmol\ gas} \times \frac{MMscf\ gas\ emissions}{10^6\ scf\ gas} = \frac{MMscf\ gas\ emissions}{MMscf\ gas\ throughput} = \%$

2023 NW Natural Environmental Data

NW Natural's Emissions

	2023	2022	2021
Fugitive Methane Emissions Rate[6]	0.128%	0.126%	0.131%
Scope 1 Emissions[7]	101,298 $MTCO_2e$	102,496 $MTCO_2e$	97,113 $MTCO_2e$
Scope 2 Facility Emissions (electricity use)[8]	2,394 $MTCO_2e$	2,398 $MTCO_2e$	2,972 $MTCO_2e$
Scope 2 Total Emisssions (electricity use)[9]	2,662 $MTCO_2e$	2,646 $MTCO_2e$	N/A – information not available to perform calculation

[6] Fugitive emissions calculated in accordance with EPA's 40 CFR part 98 subpart W. Percentage is calculated by metric tons of fugitive emissions divided by volume of gas delivered through our system. MMscf of methane emissions per MMscf of methane throughput.

[7] Includes NW Natural's use of gas footprint, fleet fuel carbon footprint, and natural gas fugitive emissions from system operations. Company use of gas footprint includes emissions from direct use of gas by NW Natural, including space and water heat, line heaters, compressors and other natural gas equipment, and calculations use emission factors from 40 CFR Part 98 Subpart C Table C-1 and C-2. Fleet fuel carbon footprint includes all NW Natural fleet fuel combustion associated with operating fleet vehicles (including diesel, gasoline, and CNG vehicles), and fleet equipment, and calculations use emissions factors for CO2 from Appendix H of US EIA Instructions for Form EIA-1605. Natural gas fugitive emissions from system operation are calculated in accordance with EPA's 40 CFR part 98 subpart W and fugitive emission from our system in Oregon undergo third party verification under the Oregon Department of Environmental Quality's Greenhouse Gas Reporting Program framework.

[8] Includes data from electricity data from utility bills from facilities and legacy environmental accounts. Calculated by multiplying electricity usage at each facility by the emissions factor for the corresponding electric utilities (published in 2021 by the Oregon Department of Environmental Quality and 2020 by the Washington Department of Commerce). Scope 2 Facility Electricity Emissions represent 12 months of electricity usage at the 18 main facilities operated by NW Natural. Due to the meter reading dates on the utility bills this value is approximate.

[9] Includes data from utility bills from all NW Natural sites including legacy environmental accounts, rectifier, and telecom sites. Calculated by multiplying electricity usage at each facility by the emissions factor for the corresponding electric utilities (published in 2021 by the Oregon Department of Environmental Quality and 2020 by the Washington Department of Commerce).

Not to be used for investment purposes—see NW Natural and NW Natural Holdings most recent Form 10-Ks as updated by the most recent quarterly and periodic reports for information relevant to investment decisions.

2023 Additional Statistics

2023 NW Natural Gas Utility Statistics

Sector	Customers (as of 12/31/23)	Gas Delivered During 2023		Natural Gas Rate (Weighted Average Rates from 11/1/22-10/31/23)	
		Therms	MMBtu	Variable Rate per Therm	Fixed Rate per Month
Residential	728,915	455,702,837	455,702,837	$1.22	$8
Commercial	69,273	280,051,963	28,005,196	$1.05	$24
Industrial	755	179,317,270	17,931,727	$0.75	$250
Transportation	307	291,601,384	29,160,138	$0.05	$880
Total	799,250	1,206,673,454	120,667,345		

In 2023, NW Natural used approximately 16,136 megawatt hours of electricity and approximately 5.7 million therms of natural gas in our own operations.

Forward-Looking Statements

This report and other materials prepared by NW Natural Holdings from time to time may contain forward-looking statements within the meaning of the U.S. Private Securities Litigation Reform Act of 1995. Forward-looking statements can be identified by words such as "anticipates," "assumes," "continues," "could," "intends," "plans," "seeks," "believes," "estimates," "expects", "will" and similar references to future periods. Examples of forward-looking statements include, but are not limited to, statements regarding the following: plans, objectives, assumptions, estimates, expectations, timing, goals, strategies, commitments, future events, continuation of past practices, investments, projections, expectations, outlooks, commitments, intentions, acquisitions and timing, completion and integration thereof, infrastructure investments, safety results and implementation of safety initiatives and expected benefits, system inspections and quality assurance measures, system modernization, improvements and reliability, infrastructure resiliency, gas storage capabilities, business continuity and emergency preparedness measures, damage prevention measures, risk management programs, commodity costs and sourcing, competitive advantage, marketing, service territory, customer service, customer and business growth, customer satisfaction ratings, weather and ability to serve customers during weather events, customer rates, customer support, affordability and bill payment assistance initiatives, customer preference, business risk, efficiency of business operations, operational performance and costs, business development, new business initiatives and the success of such initiatives, water, wastewater and water services industry, acquisitions, partnerships and investments, including timing, completion and integration of such investments and related operational initiatives, financial positions and performance, operating plans of third parties, global, local and national economies, economic and housing market conditions, trends and performance, capital expenditures, technological and equipment innovations and investments, cybersecurity initiatives and investments, strategic goals and visions and our communication of such goals and visions, environmental initiatives and expected outcomes, matters related to climate change, greenhouse gas reduction and the role of natural gas and the gas delivery system, including use of and demand for renewables, carbon emissions, targets and savings, renewable natural gas projects or investments and timing, and completion thereof, unregulated renewable natural gas strategy and initiatives, hydrogen projects, programs and investments and timing and completion thereof, emerging decarbonization technologies and equipment, gas supply initiatives, including supply chain emissions reduction and procurement of renewable natural gas or hydrogen, energy efficiency initiatives, investments and funding, carbon offset initiatives, energy usage and savings, operational sustainability measures, water use, waste reduction, charitable donations and volunteer programs, political contributions, workforce trends, labor relations, diversity, equity and inclusion initiatives, compensation and benefit programs, employee training, sustainable procurement initiatives, the regulatory environment, timing or effects of future regulatory proceedings or future regulatory approvals or rate case outcomes, effects of public policy, legislation and changes in laws and regulations, including but not limited to carbon, climate, renewable natural gas and hydrogen regulations, effects, extent, severity and duration of pandemics or epidemics and any resulting economic disruption therefrom, geopolitical uncertainty, and other statements that are other than statements of historical facts.

The forward-looking statements contained in this report are provided for the general information of our stakeholders and are not intended to induce any sales or purchases of securities or to be used in connection therewith for any investment purposes. Forward-looking statements are based on our current expectations and assumptions regarding our business, the economy, geopolitical factors and other future conditions. Because forward-looking statements relate to the future, they are subject to inherent uncertainties, risks and changes in circumstances that are difficult to predict. Our actual results may differ materially from those contemplated by the forward-looking statements. You are therefore cautioned against relying on any of these forward-looking statements. They are neither statements of historical fact nor guarantees or assurances of future performance. Important factors that could cause actual results to differ materially from those in the forward-looking statements are discussed by reference to the factors described in Part I, Item 1A "Risk Factors," and Part II, Item 7 and Item 7A "Management's Discussion and Analysis of Financial Condition and Results of Operations," and "Quantitative and Qualitative Disclosure about Market Risk" in the Company's most recent Annual Report on Form 10-K, and in Part I, Items 2 and 3 "Management's Discussion and Analysis of Financial Condition and Results of Operations" and "Quantitative and Qualitative Disclosures About Market Risk", and Part II, Item 1A, "Risk Factors", in the Company's quarterly reports filed thereafter, which, among others, outline legal, regulatory and legislative risks, public health risks, financial, macroeconomic and geopolitical risks, growth and strategic risks, operational risks, business continuity and technology risks, environmental risks and risks related to our water and renewables businesses.

All forward-looking statements made in this report and all subsequent forward-looking statements, whether written or oral and whether made by or on behalf of the Company, are expressly qualified by these cautionary statements. Any forward-looking statement speaks only as of the date on which such statement is made, and we undertake no obligation to publicly update any forward-looking statement, whether as a result of new information, future developments or otherwise, except as may be required by law. New factors emerge from time to time and it is not possible to predict all such factors, nor can it assess the impact of each such factor or the extent to which any factor, or combination of factors, may cause results to differ materially from those contained in any forward-looking statements.

Direct Testimony of Cory A. Beck

LANGUAGE ACCESS APPROACH

Exh. CAB-1T

August 29, 2025

DIRECT TESTIMONY OF CORY A. BECK

Table of Contents

I. Introduction and Summary 2

II. List of Exhibits 12

I. INTRODUCTION AND SUMMARY

Q. Please state your name and position at Northwest Natural Gas Company ("NW Natural" or "the Company").

A. My name is Cory Beck. I am the Director of Customer Experience Services for NW Natural. My responsibilities include customer and public communications, advertising, website, digital portal and Interactive Voice Response (IVR) services, natural gas safety communications, and our Federal Public Safety Awareness program. I have worked for NW Natural since 2005.

Q. Please describe your education and employment background.

A. I received my undergraduate degree in Graphic Design from Oregon State University and a Master of Business Administration from Marylhurst University. From 1994 to 1998, I worked as an account executive at a design agency, Electro Art, in Portland, Oregon. From 1998 to 2000, I worked as an account executive at an advertising agency, Gerber Advertising, in Portland, Oregon. From 2000 to 2005, I worked as an account supervisor at a marketing and advertising agency, CMD (Creative Media Development), also in Portland, Oregon.

Q. What is the purpose of your testimony?

A. The purpose of this testimony is to describe NW Natural's commitment to making sure that all customers—regardless of English proficiency or income level—have equitable access to essential utility programs and information.

Q. Please summarize your testimony.

A. NW Natural's testimony outlines its proactive efforts to ensure language accessibility for all customers, especially those with limited English proficiency.[1] Currently, NW Natural collaborates with community-based organizations ("CBOs") and the Community Equity Advisory Group ("CEAG") to review and improve communications. Program information is shared through trusted CBOs, and materials are translated into multiple languages in partnership with Immigrant and Refugee Community Organization (IRCO). Spanish-language television and radio ads are aired on Spanish media channels, and plans are underway to expand the Company's website to support multiple languages. These efforts are guided by best practices in plain language, translation, reading level, and technology access, as recommended by our CBOs and CEAG members.

The testimony defines NW Natural's language access approach and explains why it matters—not just for compliance, but to promote equity and meaningful access to services. Priority is given to translating vital documents such as bills, disconnection notices, and low-income program materials, along with website content, self-service tools, outreach materials, and instructional content. These efforts help reduce confusion and service delays by addressing language barriers and improving program access for customers.

[1] As used here, Limited English Proficiency is defined in the same manner that the Commission defined the term in its Interim Procedural Equity Policy Statement in Docket A-230217, which is: "individuals for whom English is not their primary language and who have a limited ability to read, write, speak, or understand English." *See* Interim Procedural Equity Policy Statement at note 45.

Customers who benefit include speakers of Spanish, Chinese, Vietnamese, and Russian,[2] as well as those with lower literacy levels. To ensure continued success, NW Natural plans to monitor the use of language services—such as interpretation calls and QR code engagement in low-income program materials—while gathering feedback from CBOs and CEAG. The Company will also document challenges to refine future implementation.

Q. What is language access?

A. Language access is essential to advancing equity for all NW Natural customers. It ensures that customers with limited English proficiency can meaningfully access and engage with critical services and information. Beyond meeting compliance requirements, language access reflects NW Natural's commitment to inclusive customer experiences—both now and into the future—by supporting equitable access for the communities we serve.

Q. How did NW Natural determine what steps to take in developing its language access approach?

A. The Company relied on guidance from the State of Washington and the Commission itself in determining how to improve accessibility to vital services for customers with limited English proficiency. The Commission recently issued its Interim Policy Statement Regarding Procedural Justice in Docket A-230217, and the Company's language access approach reflects the values and guidance provided in that Policy Statement. Specifically, the Commission states:

[2] These languages, along with English, are the most commonly used by our customers according to the most recent census data.

> To better meet the needs of customers with limited English, energy utilities are encouraged to translate vital documents, including but not limited to: applications for service, informational correspondence once taking new service, and any brochure for Limited English Proficiency (LEP) customers within the utility's service territory outlining customers' rights and responsibilities. Once the utility has determined the top three languages spoken in its service territory using the most recent survey from the United States Census, the utility should post each of the translated documents in each of the three languages on the utility's website.[3]

Further, in Order 09 in Docket UG-210755, the Commission stated that utilities should internalize equity justice in their decision-making processes by viewing their decision-making process through an equity lens.[4] Four core tenets make up the framework of that equity lens: (1) recognition justice, (2) procedural justice (3) distributional justice, and (4) restorative justice, [5] as discussed in the Direct Testimony provided by Ms. Cecelia J. Tanaka (Exh. CJT-1T). Procedural justice means that a utility should seek to collaborate transparently with a broad range of constituents within its service territory when it makes a decision that will impact customers directly or indirectly. A genuine offer to collaborate must include consideration of anything that might hinder conversation, including the language spoken. Accordingly, the Commission has expressed a desire for utilities to incorporate a process for considering how to eliminate or reduce language barriers that may hinder customer conversation or

[4] *In the Matter of Washington Utilities and Transportation Commission v. Cascade Natural Gas Corporation,* Docket UG-210755, Final Order 09, Approving and Adopting Settlement Agreement Subject to Conditions (Aug. 23, 2022).

[5] Docket UG-210755, Final Order 09, at para. 56 (Aug 23, 2022).

understanding. Additionally, "equity lens," as that term is used by the Commission, expressly includes considering language access in an equity evaluation.[6]

Q. Please describe the steps that NW Natural is taking to ensure that customer information—particularly regarding income-based energy assistance programs—is accessible and easy to understand.

A. The Company is committed to integrating accessibility features and offerings across its programming, customer communications, and public outreach. Whenever a new tool becomes known or available in one area, efforts are made to implement it throughout the Company as appropriate. For example, when Plain Language accessibility was recommended for bill discount program information materials, the Company's Communications team began incorporating these language screens across its material development process, in addition to bill discount material. This is in addition to NW Natural's practice of providing program information in the top five most used languages in the Company's territory (Chinese, Vietnamese, Russian, Spanish, and English).

Additional steps the Company makes to ensure inclusive, accessible communications, include:

[6] RCW 43.06D.010.

- Actively engaging CEAG[7] members, who represent diverse community-based organizations[8] throughout the Company's service territory, and providing feedback[9] across multiple topics. Outreach materials, strategies, and best practices have been reviewed and discussed in several meetings. This collaborative process ensures that the content is guided by the expertise of CBO partners that know their communities best. As a result, customers receive clearer, more accessible information about programs that lower bills and reduce energy usage---including bill discounts, arrearage management, free weatherization and energy efficiency resources, and other Company offerings.
- CEAG feedback played an integral role in the development of the Company's 2025 Integrated Resource Plan ("IRP"). With regard to enhanced language access, the Company made several CEAG-informed enhancements to the IRP, including:

[7] The Community & Equity Advisory Group (CEAG) is a collaboration between NW Natural and our community-based organization (CBO) partners. The CEAG meets quarterly to discuss and provide direct feedback, recommendations on utility operations and programming. It is intended to seek out and elevate historically underrepresented voices, perspectives and lived experiences to participate in NW Natural's energy and operational planning. NW Natural holds quarterly CEAG discussions with its members on specific topics related to equity, energy justice, or other topics of interest related to NW Natural's operations and energy services.

[8] CEAG recruitment focuses on CBOs that serve an identity, community, and underrepresented/underserved population present within the NW Natural service territory in Washington and Oregon —prioritizing organizations that had not participated in energy planning and Company program planning opportunities in the past.

[9] At each CEAG meeting, NW Natural provides a detailed report to the CEAG on topics such as the concrete actions, deliverables, and milestones achieved that were undertaken or achieved since the last meeting and under the recommendations from CEAG members in an effort to demonstrate and strengthen accountability to the CEAG. Providing a clear closed circle on how feedback is being utilized when it is collected from communities is core to this practice. This involves ensuring that community feedback is not only collected but also transparently integrated into decision-making processes, creating a loop where community members can see the impact of their input.

- Updating the Company's IRP webpage to offer more comprehensive information on the IRP development process, ways to get involved, and a section for Frequently Asked Questions (FAQs).
- Offering translation service upon request.
- Hosting community-based resource fairs, tabling events and partner workshops to engage non-technical audiences and provide a pathway to resource planning education and informed engagement.
- Developing an IRP informational toolkit to utilize at community events.
- Engaging external guidance to provide impartial facilitation and expertise in managing technically complex public processes and fostering meaningful dialogue and collaboration among technical experts, the general public, and the Company.
- Developing an IRP Feedback Form to establish a more standardized approach to its feedback process. The form is publicly accessible on the Company's Energy/Resource Planning webpage and highlighted during each IRP workshop, technical working group (TWG), and other public engagement events.

- Leveraging partnerships with CBOs to disseminate information about programs, especially those serving low-English-proficiency and low-income populations.
- Incorporating best practices related to plain language, reading grade level, translations, and technology access, recommended by our CBO and CEAG members.

- Creating materials in multiple languages, translated in partnership with locally based IRCO (Immigrant and Refugee Community Organization).
- Translating most television and radio advertising to Spanish and airing on Spanish media channels.
- NW Natural is also planning to add language preference and selection functionality to the customer-facing website that would translate the website into five of the most common languages spoken in NW Natural's service territory. This is part of the Customer Self-Service Enhancements Project, described in the confidential Direct Testimony provided by Mr. Brian E. Fellon (Exh. BEF-1CT).

Q. What type of information is prioritized in language access?

A. Language access focuses on ensuring clear, multilingual access to essential customer information, including:

- Vital documents such as billing statements, disconnection notices, and income-based program materials,
- Website content and self-service portals,
- Outreach materials shared at community events and through community-based organizations, and
- Calls to action and instructional content that guide customers through key processes.

Q. Do you have examples of how the Company is ensuring language access?

A. Yes. Exh. CAB-2 contains NW Natural's bill discount program application in Spanish, Chinese, Vietnamese, and Russian. Exh. CAB-3 is a brochure and a postcard for the bill discount program in each of these languages. Exh. CAB-4 is the bill insert and

letter for the meter update program in these languages. Finally, Exh. CAB-5 has examples of low-income outreach that also show the Company's commitment to language access.

Q. **How do NW Natural's language access enhancements benefit customers?**

A. By translating key materials—such as program eligibility, application steps, and contact information—into the commonly spoken languages in NW Natural's service area, customers with limited English proficiency can quickly understand their options. Language access also includes identifying and removing barriers, such as ensuring materials are linguistically and culturally appropriate, and closing communication gaps that may prevent customers from accessing low-income programs.

Language access is designed to support customers who speak the most common non-English languages in our service area: Spanish, Chinese, Vietnamese, and Russian. Additionally, customers with lower literacy levels—particularly those reading at a 6th- to 8th-grade level—will benefit from plain-language messaging that makes critical information easier to understand.

Q. How can NW Natural ensure successful language access?

A. NW Natural can ensure the success of language access through a commitment to continuous improvement. This could include:

- Tracking use of language services over time (e.g., monitoring volume of interpretation calls and number of times QR codes scanned—without requiring customers' personal information). Exhs. CAB-3, CAB-4, and CAB-5 all include QR codes. Exh. CAB-6 has an example of how the Company uses QR code data for the bill discount program.

- Engaging regularly with CBOs and the Community & Equity Advisory Group (CEAG) to gather feedback and identify areas for improvement. Engagement occurs quarterly—remotely and in person—and includes demonstration of applied feedback and recommendations.
- Documenting challenges and the actions taken to address them.
- Reviewing and updating language access based on data, community input, and changing customer needs.
- Developing language access plan anticipated to be completed by the end of 2026.

Q. Does this conclude your Direct Testimony?

A. Yes, it does.

Washington

NW Natural®

Solicitud para el Programa de descuento de facturas residenciales de NW Natural

El registro está disponible para los clientes residenciales Washington calificables de NW Natural. La elegibilidad se basa en el tamaño de su unidad familiar y en el ingreso bruto anual promedio de todos los miembros de su unidad familiar de 18 años de edad o mayores, combinado. Ingreso bruto significa sus ingresos antes de impuestos. **Vea si califica y haga su solicitud hoy mismo.**

1 Paso 1: Marque las pautas de elegibilidad de ingresos.

Los ingresos totales del grupo familiar no pueden exceder las cantidades indicadas.

- Las cantidades están basadas en los ingresos brutos totales.
- Las familias que comparten una vivienda deben presentar la solicitud como una sola unidad de residencia.

Household Size	Annual Income	Monthly Income
1	$66,100	$5,508
2	$75,550	$6,296
3	$85,000	$7,083
4	$94,400	$7,867
5	$102,000	$8,500
6	$109,550	$9,129
7	$117,100	$9,758
8	$124,650	$10,388
9	$132,200	$11,017
10	$139,750	$11,646
11	$147,300	$12,275
12	$154,850	$12,904

Por cada miembro adicional de la familia, agregue $7,600 dólares anuales o $633 dólares mensuales. En vigor a partir del 1.o de octubre de 2024.

Si su grupo familiar cumple con las pautas de ingresos bajos a moderados del Servicio de Impuestos Internos (IRS, por sus siglas en inglés), podría reunir los requisitos para recibir créditos tributarios por ingresos del trabajo. Llame al IRS al **800-829-1040** o visite **www.irs.gov/es/credits-deductions/individuals/earned-income-tax-credit-eitc**

Cómo calcular los ingresos anuales de su grupo familiar

Para los trabajadores por hora, tome su salario por hora y multiplíquelo por el promedio de horas trabajadas semanalmente. A continuación, multiplique esa cifra por 52 (semanas al año) para obtener sus ingresos brutos anuales (antes de impuestos).

Por ejemplo:

- $13.50 (tarifa por hora) x 40 (promedio de horas trabajadas por semana) = $540
- $540 x 52 (semanas al año) = $28,080 (Este es su ingreso bruto anual)

Consejo: Si los ingresos de su grupo familiar cambian de un mes a otro, tome los ingresos combinados del último mes y multiplíquelos por 12 para calcular los ingresos brutos anuales promedio de su grupo familiar. Si tiene preguntas o necesita ayuda para presentar la solicitud, llámenos al 800-422-4012.

2 Paso 2: Complete la siguiente información obligatoria.

Nombre y apellido (nombre en la factura)

Número de cuenta de NW Natural (ejemplo: 1234567-8)

Dirección del servicio

Ciudad del servicio

Washington

Estado del servicio

Código postal del servicio

Número de teléfono

Dirección de correo electrónico (se usa para la confirmación)

Idioma preferido

Declaración

1. Entiendo que la presente es una solicitud inicial y que NW Natural hará un seguimiento conmigo después de la inscripción formal con detalles sobre mi descuento.
2. Si cambian los ingresos anuales promedio de mi grupo familiar o la cantidad de personas que viven en mi grupo familiar, notificaré a NW Natural presentando una nueva solicitud en línea o llamando al 800-422-4012.
3. Entiendo que se me puede exigir una prueba de los ingresos del grupo familiar y de la cantidad de integrantes del grupo familiar, si se me pide. La información estará disponible para NW Natural y de las personas o entidades que trabajen en nombre de NW Natural para implementar este programa.
4. Entiendo que este descuento no se aplicará a los cargos que incurran antes de la inscripción, sino solamente a los nuevos cargos que surjan después de la inscripción (la inscripción puede tardar hasta 30 días).
5. Entiendo que este descuento solamente se aplica para mi residencia principal.
6. Es posible que tenga que volver a certificar cuando se transfiera el servicio o se abra una nueva cuenta.
7. NW Natural puede compartir mi información de cliente con otros servicios públicos o agencias para el registro en este y otros programas de asistencia.
8. Para optar por no participar en el programa, debo llamar a NW Natural al 800-422-4012.

Al presentar esta solicitud, certifico que la información que he proporcionado en esta solicitud es verdadera y correcta. Confirmo que he leído y entendido el contenido de la presente solicitud. También acepto los términos especificados en el Programa de descuento de facturas residenciales de NW Natural de NW Natural (Anexo L).

Firma del cliente de NW Natural

华盛顿

NW Natural®

NW Natural 住宅账单折扣计划申请

华盛顿州符合资格的 NW Natural 住宅客户可以报名。资格取决于您的家庭人数以及 18 岁及以上的家庭所有成员的平均年总收入的总和。总收入指您的税前收入。立即申请，看看您是否符合资格。

1 第 1 步：查看收入资格指南。

家庭总收入不能超过所示金额。

- 金额基于合起来的总收入。
- 同屋共户的家庭必须作为一个住宅单元提出申请。

家庭人数	年收入	月收入
1	66,100 美元	5,508 美元
2	75,550 美元	6,296 美元
3	85,000 美元	7,083 美元
4	94,400 美元	7,867 美元
5	102,000 美元	8,500 美元
6	109,550 美元	9,129 美元
7	117,100 美元	9,758 美元
8	124,650 美元	10,388 美元
9	132,200 美元	11,017 美元
10	139,750 美元	11,646 美元
11	147,300 美元	12,275 美元
12	154,850 美元	12,904 美元

每增加一名家庭成员，年收入增加 7,600 美元或月收入增加 633 美元。 Effective October 1, 2024.

如果您的家庭符合国税局的中低收入指南，您就有资格获得收入所得税抵免。请致电 **800–829–1040** 联系国税局或浏览网站 **www.irs.gov/credits–deductions/individuals/earned–income–tax–credit–eitc**

如何计算您的家庭年收入

对于小时工，请将您的时薪乘以每周平均工作小时数。再将该数字乘以 52（每年的周数），得出您的年总收入（税前）。

示例：

- 13.50 美元（时薪）x 40（每周平均工作小时数）= 540 美元
- 540 美元 x 52（每年的周数）= 28,080 美元（这是您的年总收入）

提示： 如果您的家庭收入每个月都不同，请将您上个月的收入总和乘以 12，计算得出您的平均家庭年总收入。如果您有任何疑问或需要帮助提出申请，请致电 800–422–4012，联系我们。

2 第 2 步：填写以下必填信息。

名字和姓氏（账单上的姓名）

NW Natural 账号（示例：1234567–8）

服务街道地址

服务城市

华盛顿

服务州

服务邮政编码

Washington

NW Natural®

Đơn Đăng ký Chương trình Chiết khấu Hóa đơn Tiện ích cho Khách hàng Cư dân của NW Natural

Các khách hàng cư dân đủ tiêu chuẩn của NW Natural ở Washington hiện có thể ghi danh chương trình này. Khả năng hội đủ điều kiện sẽ được xác định dựa trên quy mô hộ gia đình và tổng thu nhập trung bình hàng năm của tất cả các thành viên từ 18 tuổi trở lên trong hộ gia đình của quý vị cộng lại. Tổng thu nhập có nghĩa là thu nhập trước thuế. **Hãy xem quý vị có đủ tiêu chuẩn hay không và đăng ký ngay hôm nay.**

1 Bước 1: Kiểm tra các hướng dẫn về tiêu chuẩn thu nhập.

Tổng thu nhập hộ gia đình không được vượt quá số tiền nêu ở đây.

- Các số tiền này dựa trên tổng thu nhập.
- Các gia đình ở chung nhà phải đăng ký như họ thuộc cùng một đơn vị.

Quy mô hộ gia đình	Hàng năm Thu nhập	Thu nhập hàng tháng
1	$66,100	$5,508
2	$75,550	$6,296
3	$85,000	$7,083
4	$94,400	$7,867
5	$102,000	$8,500
6	$109,550	$9,129
7	$117,100	$9,758
8	$124,650	$10,388
9	$132,200	$11,017
10	$139,750	$11,646
11	$147,300	$12,275
12	$154,850	$12,904

Đối với mỗi thành viên bổ sung trong gia đình, hãy cộng thêm $7,600 thu nhập hàng năm hoặc $633 hàng tháng. Có hiệu lực từ ngày 1 tháng 10 năm 2024.

Nếu hộ gia đình của quý vị đáp ứng các tiêu chí về thu nhập từ thấp đến trung bình của IRS, quý vị có thể đủ tiêu chuẩn để nhận Tín dụng Thuế Thu nhập Từ Việc làm (Earned Income Tax Credits). Gọi cho IRS theo số **800-829-1040** Hoặc truy cập trang web **www.irs.gov/credits-deductions/individuals/earned-income-tax-credit-eitc**

Cách tính thu nhập hộ gia đình hàng năm

Nếu quý vị làm việc theo giờ, hãy lấy tiền lương giờ của quý vị và nhân với số giờ làm việc trung bình hàng tuần. Sau đó nhân số đó với 52 (số tuần trong một năm) để có tổng thu nhập hàng năm (trước thuế).

Ví dụ:

- $13.50 (lương giờ) x 40 (số giờ làm việc trung bình mỗi tuần) = $540
- $540 x 52 (số tuần trong một năm) = $28,080 (Đây là tổng thu nhập hàng năm của quý vị)

Mẹo: Nếu thu nhập hộ gia đình của quý vị thay đổi từ tháng này sang tháng khác, hãy cộng lại tổng thu nhập của tất cả mọi người từ tháng trước, xong lấy số đó nhân với 12 để tính ra tổng thu nhập hộ gia đình trung bình hàng năm. Vui lòng gọi cho chúng tôi theo số 800-422-4012 nếu quý vị có thắc mắc hoặc cần trợ giúp đăng ký.

2 Bước 2: Điền các thông tin bắt buộc sau đây.

Họ và tên (tên trên hóa đơn)

Số trương mục NW Natural (ví dụ: 1234567-8)

Địa chỉ của nơi nhận dịch vụ tiện ích

Thành phố

Washington

Tiểu bang

Mã Zip

Số điện thoại

Địa chỉ Email (Cho mục đích xác nhận)

Ngôn ngữ quý vị muốn sử dụng

Tiếp →

Tôi hiện đang có thu nhập cố định và tôi có thu nhập hoặc trợ cấp từ (các) nguồn sau đây: Phụ cấp An sinh (Supplemental Security Income, hoặc SSI), Medicaid, Trợ cấp từ Chương trình Nâng cao Tính tự lực (Self Sufficiency Program, hoặc SSP), và Bảo hiểm An sinh Xã hội cho Người Bệnh tật (Social Security Disability Insurance hoặc SSDI).

Vui lòng nhập tổng thu nhập theo loại:

Thu nhập kiếm được*
(ví dụ: tiền lương, tiền lương, tiền boa)
$

Trợ cấp Thất nghiệp và lương hưu
(nhập số tiền trước thuế)
$

Thu nhập tự kinh doanh
$

Phúc lợi Cựu chiến binh

Tờ khai

1. Tôi hiểu đây là đơn đăng ký đầu tiên và NW Natural sẽ liên hệ với tôi sau khi tôi được đăng ký chính thức để cung cấp thông tin chi tiết hơn liên quan đến chiết khấu của tôi.

2. Tôi sẽ thông báo cho NW Natural nếu thu nhập hộ gia đình trung bình hàng năm của tôi hoặc số người sống trong hộ gia đình của tôi thay đổi bằng cách nộp một đơn đăng ký mới trực tuyến hoặc gọi số 800-422-4012.

3. Tôi hiểu rằng có thể tôi sẽ phải cung cấp bằng chứng về thu nhập hộ gia đình và quy mô hộ gia đình nếu được yêu cầu. NW Natural và các cá nhân hoặc tổ chức đại diện cho NW Natural sẽ sử dụng các thông tin tôi cung cấp để thực hiện chương trình này.

4. Tôi hiểu rằng chiết khấu này sẽ không áp dụng cho các khoản phí phát sinh trước khi tôi đăng ký, mà chỉ áp dụng cho các khoản phí mới sau khi tôi đăng ký (việc đăng ký có thể mất đến 30 ngày).

5. Tôi hiểu rằng chiết khấu này chỉ áp dụng cho nơi ở chính của tôi.

6. Tôi có thể phải xin phép được chứng nhận lại nếu tôi chuyển đến nơi khác ở hoặc mở trương mục mới.

7. NW Natural có thể chia sẻ thông tin khách hàng với các cơ quan tiện ích hoặc cơ quan khác để ghi danh vào dịch vụ này và các chương trình hỗ trợ khác.

8. Nếu tôi chọn không tham gia chương trình này, tôi phải gọi cho NW Natural theo số 800-422-4012.

Bằng cách gửi đơn đăng ký này, tôi xác nhận rằng thông tin tôi kê khai trong đơn là đúng sự thật và chính xác. Tôi xác nhận rằng tôi đã đọc và hiểu nội dung của đơn này. Tôi cũng đồng ý với các điều khoản của Chương trình Chiết khấu Hóa đơn Tiện ích cho Khách hàng Dân cư của NW Natural (Phụ lục L).

Вашингтон

NW Natural®

Заявление на участие в программе скидок на коммунальные счета от компании NW Natural

Регистрация доступна для правомочных частных клиентов компании NW Natural в штате Вашингтон. Право на участие зависит от количественного состава вашей семьи и среднего годового валового дохода всех членов вашей семьи в возрасте 18 лет и старше. Валовой доход означает ваш доход до уплаты налогов. **Посмотрите, соответствуете ли вы требованиям, и подайте заявление сегодня.**

1 Шаг 1: Ознакомьтесь с требованиями, предъявляемыми к доходу.

Общий доход семьи не может превышать указанные суммы.

- Суммы представлены в виде общего валового дохода.
- Семьи, проживающие в одном доме, должны подать заявление в качестве одного домохозяйства.

Количественный состав семьи	Годовой доход	Месячный доход
1	66 100 долларов	5 508 долларов
2	75 550 долларов	6 296 долларов
3	85 000 долларов	7 083 долларов
4	94 400 долларов	7 867 долларов
5	102 000 долларов	8 500 долларов
6	109 550 долларов	9 129 долларов
7	117 100 долларов	9 758 долларов
8	124 650 долларов	10 388 долларов
9	132 200 долларов	11 017 долларов
10	139 750 долларов	11 646 долларов
11	147 300 долларов	12 275 долларов
12	154 850 долларов	12 904 долларов

Для каждого дополнительного члена семьи добавляйте 7 600 долларов в год или 633 долларов в месяц. Вступает в силу 1 октября 2024 года.

Если ваша семья соответствует требованиям управления IRS к доходам от низкого до среднего, вы, возможно, имеете право на получение налоговых баллов за заработанный доход. Позвоните в управление IRS по телефону **800-829-1040** или посетите веб-сайт **www.irs.gov/credits-deductions/individuals/earned-income-tax-credit-eitc**

Порядок расчета годового дохода семьи

Для работников, получающих почасовую оплату: начните с почасовой заработной платы и умножьте ее на среднее количество часов, отработанных в неделю. Затем умножьте это число на 52 (недель в году), чтобы получить годовой валовой доход (до вычета налогов).

Пример:

- 13,50 долларов (почасовая ставка) x 40 (среднее количество отработанных часов в неделю) = 540 долларов.
- 540 долларов x 52 (недель в году) = 28 080 долларов (это ваш годовой валовой доход)

Совет: Если доход вашей семьи меняется от месяца к месяцу, используйте совокупный доход за последний месяц и умножьте его на 12, чтобы рассчитать средний валовой годовой доход семьи. Если у вас возникли вопросы или вам необходима помощь в подаче заявления, позвоните нам по телефону 800-422-4012.

2 Шаг 2: Внесите запрашиваемую ниже обязательную информацию.

Имя и фамилия (имя, как указано на счете)

Декларация

1. Я понимаю, что этот документ является первоначальным заявлением, и представитель компании NW Natural свяжется со мной после официальной регистрации и предоставит подробную информацию о моей скидке.

2. Я уведомлю компанию NW Natural, если средний годовой доход моей семьи или количество людей, проживающих в моей семье, изменится, подав новое заявление через Интернет или позвонив по телефону 800-422-4012.

3. Я понимаю, что по запросу от меня могут потребовать предоставить подтверждение суммы дохода и количественного состава семьи. Информация будет предоставлена в компанию NW Natural и физическим или юридическим лицам, работающим от лица компании NW Natural для реализации этой программы.

4. Я понимаю, что эта скидка распространяется не на расходы, понесенные до регистрации, а исключительно на новые расходы после регистрации (регистрация может занять до 30 дней).

5. Я понимаю, что эта скидка распространяется исключительно на мое основное место жительства.

6. Возможно, мне придется пройти повторную сертификацию при регистрации услуги на новый адрес или открытии новой учетной записи.

7. Компания NW Natural может передавать информацию о клиентах другим коммунальным службам или агентствам для регистрации в этой и других программах помощи.

8. Для того, чтобы отказаться от участия в программе, мне необходимо позвонить в компанию NW Natural по телефону 800-422-4012.

Отправляя это заявление, я подтверждаю, что информация, предоставленная мной в этом заявлении, является достоверной и правильной. Я подтверждаю, что я прочитал(-а) и понял(-а) содержание этого заявления. Я также соглашаюсь с условиями, указанными в программе скидок на коммунальные счета от компании NW Natural (приложение L).

Подпись клиента компании NW Natural

NW Natural®

EN

We are here to help lower your energy bills.

You can learn more about these programs at **nwnatural.com/BillDiscount**, or contact us:

503-226-4211 or 800-422-4012, Monday to Friday, 7 a.m. to 6 p.m.
csst@nwnatural.com

Get Bill Discounts

NW Natural's bill discount program could save you 15% to 80% on your monthly NW Natural bills. Discounts are available if your household income is at or below 80% of area median income or federal poverty level. Effective 10/1/2024 to 9/30/2025.

Household income (family of four)	Bill discount
$18,720 or less	80%
$18,721 to $37,440	40%
$37,441 to $46,800	20%
$46,801 to $94,400	15%

Get Free Home Improvements

You may qualify for free home improvements through our partnerships with local Community Action Agencies. See these agencies at **nwnatural.com/BillDiscount**.

Free improvements can include:

- A new natural gas furnace
- A new natural gas water heater
- Home insulation

Get Help with Payments

NW Natural payment plans

We offer several payment plans. One plan, called Equal Pay, splits your yearly gas use into 11 predictable monthly payments.

Bill support from community agencies

We partner with nonprofit agencies to help you pay your energy bill. See a list of partner agencies at **nwnatural.com/BillDiscount**.

Use Less Energy

Even small steps like these can help lower your bills:

- **Keep furnace filters clean.** A dirty filter makes your furnace work harder and wastes energy.
- **Save up to 3% on energy use** with each degree you reduce the temperature on your thermostat.

See more tips at **nwnatural.com/BillDiscount**.

Get Help with Electric Bills

To lower your energy bills even more, you may qualify for support from your electric utility. Please contact your electric utility to learn more.

ES

Estamos aquí para ayudar a reducir sus facturas de energía.

Usted puede aprender más sobre estos programas en **nwnatural.com/BillDiscount**, o contáctenos:

503-226-4211 o 800-422-4012, de lunes a viernes, 7 a.m. to 6 p.m.
csst@nwnatural.com

Obtenga descuentos en las facturas

El programa de descuento en la factura de NW Natural puede ahorrarle de 15 % a 80 % en sus facturas mensuales de NW Natural. Los descuentos están disponibles si los ingresos de su unidad familiar son equivalentes al 80 %, o menos, del ingreso medio del área o del nivel federal de pobreza. En vigencia del 10/1/2024 al 9/30/2025.

Unidad familiar (familia de cuatro)	Descuento en la factura
Menos de $18,720 dólares	80%
de $18,721 a $37,440 dólares	40%
de $37,441 a $46,800 dólares	20%
de $46,801 a $94,400 dólares	15%

Obtenga mejoras para el hogar gratis

Usted podría calificar para mejoras para el hogar gratis a través de nuestras asociaciones con Agencias de Acción Comunitaria locales. Vea estas agencias en **nwnatural.com/BillDiscount**.

Las mejoras gratuitas pueden incluir:

- Una nueva unidad de calefacción de gas natural
- Un nuevo calentador de agua de gas natural
- Insolación para la casa

Obtenga ayuda con sus pagos

Planes de pago de NW Natural

Ofrecemos varios planes de pago. Un plan, llamado Equal Pay, divide su uso anual de gas en 11 pagos iguales.

Apoyo para facturas de las agencias comunitarias

Nos asociamos con agencias sin fines de lucro para ayudarle a pagar su factura de energía. Consulte la lista de agencias socias en **nwnatural.com/BillDiscount.**

Use menos energía

Incluso pequeño pasos como estos pueden ayudar a reducir sus facturas:

- **Mantener los filtros de la calefacción limpios.** Los filtros sucios hacen que su calefacción trabaje más duro y gaste energía.
- **Ahorre 3 % en el uso de energía** con cada grado que reduzca de temperatura en su termostato.

Consulte más consejos en **nwnatural.com/BillDiscount**.

Obtenga ayuda con las facturas de electricidad

Para reducir las facturas de energía aún más, usted podría calificar para obtener apoyo con su compañía de electricidad. Por favor, contacte a su compañía de electricidad para obtener más información.

CN

我们乐意帮助您减少能源账单。

您可以登录网站 **nwnatural.com/BillDiscount** 或联系我们，了解更多有关这些计划的信息：

503-226-4211 或 800-422-4012（周一到周五上午 7 点到下午 6 点）
csst@nwnatural.com

获取账单折扣

您可以通过 NW Natural 的账单折扣计划享受 NW Natural 月账单 15% 到 80% 的折扣。若您的家庭收入不超过地区中位收入或联邦贫困线的 80%，则符合折扣资格。折扣有效期：2023 年 10 月 1 日至 2025 年 9 月 30 日。

家庭收入（四口之家）	账单折扣
$18,720 美元以下	80%
$18,721 美元至 $37,440 美元	40%
$37,441 美元至 $46,800 美元	20%
$46,801 美元至 $94,400 美元	15%

获得免费家居改善

您有资格通过我们与当地社区行动机构的合作伙伴关系获得免费的家居改善。请登录网站 **nwnatural.com/BillDiscount**，查看这些机构。

免费改善包括：

- 一种新款天然气炉
- 一种新款天然气热水器
- 家居隔热层

获取付款方面的帮助

NW Natural 付款方案

我们提供多种付款方案。一种方案为等额付款方案，即是将您每年的天然气用量分成 11 个月的等额付款。

社区机构提供的账单援助

我们与非营利机构合作，帮助您支付能源账单。请登录网站 **nwnatural.com/BillDiscount**，查看合作伙伴机构列表。

使用更少的能源

即使是这样小小的举动，也可以帮助您减少账单：

- 保持火炉过滤器的清洁。肮脏的过滤器会使您的火炉效率变低，浪费能源。
- 每将恒温控制器的温度下调一度，就可以节能 3%。

请登录网站 **nwnatural.com/BillDiscount**，获得更多提示。

获取电费账单帮助

为了进一步减少您的能源账单，您可能有资格获得电力公司的援助。请联系您的电力公司，了解更多信息。

RU

Мы готовы помочь вам снизить счета за электроэнергию.

Вы можете получить дополнительную информацию об этих программах на веб-сайте **nwnatural.com/BillDiscount** или связаться с нами:

503-226-4211 или 800-422-4012 800-422-4012, с понедельника по пятницу, с 7 a.m. до 18:00 p.m.
csst@nwnatural.com

Получите скидки на оплату счетов

Программа скидок компании NW Natural может помочь вам сэкономить от 15 до 80% на ежемесячных счетах от NW Natural. Скидки предоставляются при условии, что доход вашей семьи составляет не более 80% от среднего дохода по району или от федерального уровня бедности. Действует в период с 1 октября 2024 года по 30 сентября 2025 года.

Семейный доход (семья из четырех человек)	Скидка на оплату счетов
До 18 720 долл.	80%
От 18 721 долл. до 37 440 долл.	40%
От 37 441 долл. до 46 800 долл.	20%
От 46 801 долл. до 94 400 долл.	15%

Получите бесплатные средства для благоустройства дома

Вы можете иметь право на бесплатные средства для благоустройства дома благодаря нашему партнерству с местными общественными службами. Перечень этих служб см. на веб-сайте **nwnatural.com/BillDiscount.**

К бесплатным средствам для благоустройства дома могут относиться:

- Новая газовая печь
- Новый водонагреватель, работающий на природном газе
- Теплоизоляция дома

Получите помощь с оплатой счетов

Схемы оплаты от компании NW Natural

Мы предлагаем несколько планов оплаты счетов. Один план, называемый «Equal Pay» (равные платежи), разделяет годовое потребление газа на 11 равных ежемесячных платежей.

Поддержка в оплате счетов от общественных организаций

Мы сотрудничаем с некоммерческими организациями, чтобы помочь вам в оплате счетов за электроэнергию. Перечень партнерских служб см. на веб-сайте **nwnatural.com/BillDiscount**.

Потребляйте меньше электроэнергии

Даже небольшие шаги, подобные тем, что перечислены ниже, могут помочь вам сократить ваши счета:

- **Поддерживайте печные фильтры в чистоте.** Грязный фильтр усложняет работу печи и приводит к трате энергии.
- **кономьте 3% энергии** с каждым градусом понижения температуры на термостате.

Дополнительные советы см. на веб-сайте **nwnatural.com/BillDiscount**.

Получите помощь в оплате счетов за электричество

Возможно, вы имеете право на поддержку со стороны вашей электроэнергетической компании, чтобы еще больше сократить расходы на электроэнергию. Пожалуйста, свяжитесь с вашей электроэнергетической компанией, чтобы получить дополнительную информацию.

Chúng tôi có thể giúp quý vị giảm chi phí năng lượng của mình.

VI

Quý vị có thể tìm hiểu thêm về các chương trình này tại **nwnatural.com/BillDiscount** hoặc liên lạc với chúng tôi.:

503-226-4211 hoặc 800-422-4012 800-422-4012, Thứ Hai đến Thứ Sáu, 7:00 sáng đến 6:00 chiều
csst@nwnatural.com

Chiết khấu hóa đơn

Chương Trình Giảm Giá Hóa Đơn của NW Natural có thể giúp quý vị tiết kiệm từ 15% đến 80% hóa đơn NW Natural hàng tháng. Chương trình giảm giá có thể áp dụng nếu thu nhập hộ gia đình của quý vị bằng hoặc dưới 80% thu nhập trung bình của khu vực hoặc mức nghèo liên bang. Có hiệu lực từ ngày 1/10/2023 đến ngày 30/9/2025.

Thu nhập hộ gia đình	Chiết khấu hóa đơn
Dưới $18,720	80%
$18,721 đến $37,440	40%
$37,441 đến $46,800	20%
$46,801 đến $94,400	15%

Nhận các thiết bị nâng cấp nhà cửa miễn phí

Quý vị có thể hội đủ tiêu chuẩn để được cải tiến các hệ thống tiện ích trong nhà miễn phí thông qua quan hệ đối tác của chúng tôi với các Cơ quan Vận động Cộng đồng (Community Action Agencies). Xem các cơ quan này tại **nwnatural.com/BillDiscount**.

Các cải tiến miễn phí này có thể bao gồm:

- Một lò khí đốt tự nhiên mới
- Một máy đun nước bằng khí đốt tự nhiên mới
- Hệ thống cách nhiệt trong nhà

Hỗ trợ trong việc thanh toán

Các kế hoạch thanh toán của NW Natural

Chúng tôi có một vài kế hoạch thanh toán. Kết hoạch Equal Pay sẽ chia hóa đơn tiền gas hàng năm của quý vị thành 11 khoản thanh toán hàng tháng bằng nhau.

Hỗ trợ thanh toán hóa đơn từ các cơ quan cộng đồng

Chúng tôi hợp tác với các cơ quan phi lợi nhuận để giúp quý vị thanh toán hóa đơn năng lượng. Xem danh sách các đối tác của chúng tôi tại **nwnatural.com/BillDiscount**.

Giảm tiêu dùng năng lượng

Ngay cả những việc làm nhỏ như thế này cũng có thể giúp quý vị tiết kiệm chi phí năng lượng:

- **Đảm bảo bộ lọc của lò sưởi luôn sạch.** Bộ lọc bẩn sẽ làm cho lò của quý vị làm việc nhiều hơn và lãng phí năng lượng.
- **Tiết kiệm 3% mức sử dụng năng lượng** với mỗi độ mà quý vị hạ xuống trên bộ điều nhiệt của mình.

Xem thêm mẹo tại **nwnatural.com/BillDiscount.**

Được trợ giúp về hóa đơn tiền điện

Để giảm hóa đơn năng lượng nhiều hơn nữa, quý vị có thể đủ tiêu chuẩn để được trợ giúp bởi công ty điện của mình. Vui lòng liên lạc với công ty điện của quý vị để tìm hiểu thêm.

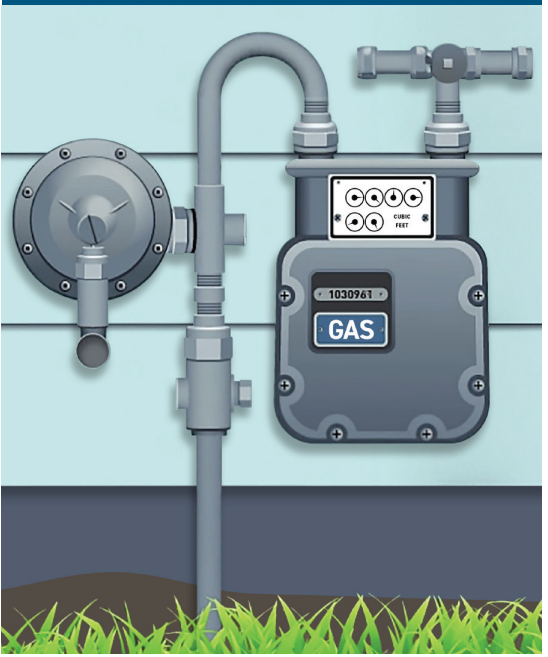
METER UPDATE PROJECT



Over the next few months, we will start updating some gas meters in your area. You may notice more NW Natural contractor vehicles and crews.

Not all meters will be updated. If your meter will be updated, you will receive a letter with additional details by mail or email before work begins. Your gas service should not be affected.

The schedule is subject to change.

NW Natural®

Visit **nwnatural.com/Meter** for more information.

Proyecto de Actualización del Medidor Natural del NW

En los próximos meses, comenzaremos a actualizar algunos medidores de gas en los hogares de su área. No se actualizarán todos los medidores. Los horarios están sujetos a cambios.

NW Natural 表具更换项目

在接下来的几个月里，我们将更新您所在地区的一些燃气表。并非所有灯具都需要更新。时间表可能会发生变化。

Dự Án Cập Nhật Đồng Hồ Đo NW Natural

Trong vài tháng tới, chúng tôi sẽ bắt đầu cập nhật một số đồng hồ đo gas cho các ngôi nhà trong khu vực của bạn. Không phải tất cả các đồng hồ đo sẽ được cập nhật. Lịch trình có thể thay đổi.

Проект обновления счетчиковкомпании NW Natural

В течение следующих нескольких месяцев мы начнем обновлять некоторые газовые счетчики в домах в вашем районе. Не все счетчики будут обновлены. Расписание может быть изменено.

nwnatural.com

Advance notice for gas meter access

Dear valued customer,

NW Natural contractor crews will be updating your gas meter as part of planned maintenance over the next few months.

You do not need to be home for your meter to be updated, and your gas service should not be affected. However, now is a great time to make sure there is clear access to your gas meter.

How to prepare for your meter update

- Please check the area around your meter to make sure we have a clear path to access it, and at least 3 feet of space in all directions. This could mean you need to prune, remove foliage, move objects away from your meter, and unlock gates.
- If we cannot reach the meter, we will leave a notice with a number for you to call and schedule time to access it.

Thank you in advance for working with us. Learn more about gas meter updates, schedules and what to expect at:

nwnatural.com/Meter

Sincerely,

NW Natural

NW Natural®

250 SW Taylor Street
Portland, OR 97204

503-226-4211

Notificación anticipada para el acceso al medidor de gas

Estimado/a y valorado/a cliente:

Las cuadrillas contratistas de NW Natural estarán actualizando su medidor de gas como parte de un mantenimiento planeado a partir de los siguientes meses. Usted no tiene que estar en casa para la actualización de su medidor, y su servicio de gas no se verá afectado. Sin embargo, este es un buen momento para garantizar que haya acceso sin obstrucciones a su medidor de gas. Escanee la código QR para obtener más información sobre el acceso al medidor, los calendarios, y qué esperar.

Предварительное уведомление о доступе к газовому счетчику

Уважаемый клиент!

В рамках планового технического обслуживания бригады подрядчиков компании NW Natural будут производить обновления газовых счетчиков в течение следующих нескольких месяцев. Во время работы по обновлению счетчика вам не обязательно находиться дома, и работа не должна повлиять на подачу природного газа. Тем не менее, сейчас самое время убедиться в том, что к вашему газовому счетчику имеется беспрепятственный доступ. Отсканируйте QR-код, чтобы получить дополнительную информацию об обеспечении доступа к счетчику, графике работ и о том, чего следует ожидать.

燃气表访问提前告知通知

尊敬的客户：

NW Natural 的承包商团队将在未来几个月内开始进行计划内维护，更新您的燃气表。您无需在家即可更新燃气表，您的燃气服务也不会受到影响。但是，现在是确保您的燃气表周围通道畅通的好时机。扫描二维码，了解更多关于燃气表访问、时间安排以及相关注意事项的信息。

Thông báo trước về việc tiếp cận đồng hồ đo gas

Kính gửi quý khách hàng,

Đội ngũ nhà thầu của NW Natural sẽ cập nhật đồng hồ đo gas của quý vị như một phần của hoạt động bảo trì theo kế hoạch bắt đầu trong vài tháng tới. Quý vị không cần phải ở nhà để cập nhật đồng hồ đo và dịch vụ gas của quý vị sẽ không bị ảnh hưởng. Tuy nhiên, bây giờ là thời điểm tuyệt vời để đảm bảo có thể tiếp cận đồng hồ đo gas của quý vị một cách dễ dàng. Vui lòng quét mã QR để tìm hiểu thêm về cách tiếp cận đồng hồ đo, lịch trình và những điều được mong đợi.

III. Long-Term Debt and Short-Term Debt 16

IV. List of Exhibits 23

I. INTRODUCTION AND SUMMARY

Q. Please state your name, address and position at Northwest Natural Gas Company ("NW Natural" or "Company").

A. My name is Brody J. Wilson. My business address is 250 SW Taylor Street, Portland, Oregon 97204. My current position at NW Natural and Northwest Natural Holding Company ("NW Natural Holdings") is Vice President, Controller, Treasurer and Chief Accounting Officer.

Q. Please summarize your educational background and business experience.

A. I received a Bachelor of Arts in accounting from George Fox University in 2001. From 2001 through 2012, I worked at PricewaterhouseCoopers, LLP, in the Power and Utilities Assurance practice. I joined NW Natural in 2012 as Accounting Director. In 2013, I was appointed as Controller and Chief Accounting Officer of NW Natural and its subsidiaries. In 2016, I was appointed Treasurer.

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to support the Company's requested capital structure and explain the Company's financing strategy and how that leads to a financially healthy utility that benefits its customers.

Q. Please summarize your testimony.

A. The Company's financing strategy is to maintain a balance of long-term debt and equity financing, by targeting a capital structure that supports its strong investment grade credit profile. The Company's strong investment grade credit ratings support its ability to efficiently access capital markets. NW Natural works to manage interest rate risk and secure low-cost capital to fund utility infrastructure and operations. To do this, the

Company prioritizes maintaining a strong balance sheet and focusing on financing the long-term assets of the Company through a balance of long-term debt and equity financing, with minimal reliance on short-term debt. To further explain the Company's financing strategy, my testimony:

- Describes NW Natural's request for a capital structure of 51 percent common equity, 1 percent short-term debt, and 48 percent long-term debt, with an overall rate of return ("ROR") on rate base for each rate year provided in Table 1 below.
- Describes NW Natural's plan to maintain its targeted ratios of equity, short-term debt, and long-term debt;
- Explains the method for calculating short and long-term cost of debt for the Test Year (Twelve Months ended 3/31/2025) and each subsequent rate year.

II. CAPITAL STRUCTURE AND RATE OF RETURN

Q. What is NW Natural's current Commission-authorized overall ROR?

A. In the Company's last general rate case (Order 05 in Docket UG-200994), the Commission adopted a settlement which included an ROR of 6.814 percent. The components of the ROR were not specified by the settling parties.

Q. What is NW Natural's requested capital structure for ratemaking purposes and overall ROR in this proceeding?

A. NW Natural is requesting an authorized capital structure of 51.0 percent equity, 1.0 percent short-term debt and 48.0 percent long-term debt, with an overall rate of return (ROR) on rate base provided by rate year in Table 1 below. The following table presents the proposed capital structure along with the calculation of the Company's ROR for each year of the Multi-Year Rate Plan:

Table 1. Requested Capital Structure and Rate of Return

Test Year (13-month Avg. Ending 3/31/25)			
Component	Ratio	Cost	Weighted Cost
Long-term Debt	50.06%	4.697%	***
Short-term Debt	2.06%	6.335%	***
Common Equity	47.87%	***	***
Total	**100%**		**6.982%**

*** Confidential due to black box settlement in UG 200994

Rate Year 1 (13-months Avg. Ending 7/31/27)			
Component	Ratio	Cost	Weighted Cost
Long-term Debt	48.0%	4.779%	2.294%
Short-term Debt	1.0%	6.04%	0.060%
Common Equity	51.0%	10.1%	5.151%
Total	**100%**		**7.505%**

Rate Year 2 (13-month Avg. Ending 7/31/2028)			
Component	Ratio	Cost	Weighted Cost
Long-term Debt	48.0%	4.924%	2.364%
Short-term Debt	1.0%	5.745%	0.057%
Common Equity	51.0%	10.2%	5.202%
Total	**100%**		**7.623%**

Rate Year 3 (13-month Avg. Ending 7/31/2029)			
Component	Ratio	Cost	Weighted Cost
Long-term Debt	48.0%	5.005%	2.402%
Short-term Debt	1.0%	5.674%	0.057%
Common Equity	51.0%	10.2%	5.202%
Total	**100%**		**7.661%**

Q. What was NW Natural's capital structure in the Test Year?

A. Based on a 13-month average of monthly averages ("AMA") for the year ended March 31, 2025, the Company's capital structure was 47.87 percent Equity, 50.06 percent Long-Term Debt, and 2.06 percent Short-Term Debt. However, recently NW Natural

has targeted a higher equity ratio in its capital structure. In Table 2 below, the capital structure has recently maintained Equity higher than 52 percent.

Table 2. Recent Capital Structure

Recent Cap Structures			
Component	Test Year (13-Month Avg Ending 3/31/25)	As of 3/31/25	As of 6/30/25
Long-term Debt	50.06%	47.4%	47.4%
Short-term Debt	2.06%	0.0%	0.0%
Common Equity	47.87%	52.6%	52.6%

Q. Why is NW Natural changing its targeted capital structure?

A. NW Natural's target capital structure has been 49 percent equity/1 percent short term debt/50 percent long term debt for a number of years. In order to strengthen its balance sheet, attract investment, better align with peer gas utilities, improve credit metrics, and maintain solid investment grade credit ratings—all of which benefit customer rates—NW Natural has taken steps to increase its capital structure to above 51 percent equity in 2025.

The Company is targeting a long-term debt percentage of 48 percent with a 1 percent short-term debt balance because generally, companies with higher debt ratios are considered riskier, as a higher debt layer in the capital structure inherently puts pressure on the credit metrics. By reducing its long-term debt ratio to 48 percent, the Company is improving its risk profile and moving to be in-line with its natural gas peer group. Reducing the Company's debt ratio to 48 percent is likely to be viewed positively by the rating agencies. Moody's Investor Service ("Moody's") methodology specifically looks at debt/capitalization ratios and generally, a lower amount of debt

improves the metrics. Moody's July 8, 2025 credit opinion states, "...we view a higher equity ratio as a credit positive because it supports higher required revenue and reduces reliance on debt, which helps to support stronger credit metrics...". The latest rating agency credit reports can be found in Exh. BJW-2.

This equity ratio demonstrates the Company's commitment to a strong and stable balance sheet, which helps maintain the Company's current credit ratings. Strong investment-grade credit ratings provide the Company with financing flexibility and liquidity, thereby ensuring timely, efficient, and cost-effective access to capital markets, which in turn helps to lower the cost of capital. The cost of capital and capital structure directly impact the return for debt service and common equity investors within the revenue requirement calculation.

Q. What is NW Natural's plan to maintain the target equity ratio of 51 percent over the next few years?

A. The Company plans to rely on retained earnings growth each year, as well as continuing to request equity infusions from its parent company. The Company has a strong track record of operating its business at or near its authorized capital structure. This includes a strong track record of support from NW Natural's parent company as evidenced through the equity contributions made over the years.

Q. Has the Company received equity from the parent company, NW Natural Holdings, since the holding company structure was approved by the Commission?

A. Yes. Table 3, below, displays the equity contributions from NW Natural Holdings to the Company since 2019. Equity infusions from the parent company help the Company manage its common equity and maintain a strong balance sheet.

Table 3. Equity Contributions from NW Natural Holdings to NW Natural

2019	2020	2021	2022	2023	2024	YTD June 2025
(In millions)						
$93	$ -	$116	$179.4	$30	$75	$135

Q. What are the credit concerns of the rating agencies for NW Natural?

A. The rating agencies' most significant factors in determining ratings are how constructive the regulatory framework is in the jurisdictions the Company does business (business risk), the ability of the Company to recover costs and earn a sufficient rate of return, and the financial strength of the organization as measured by its credit metrics. NW Natural's key credit metrics, which help investors evaluate the creditworthiness and risk profile of the Company, generally are quantitative measures of the Company's operating cash inflows, its capital requirements or outflows, and its debt profile. NW Natural's credit metrics have been inconsistent and below the rating agencies' downgrade thresholds over the last five years. By lowering the debt levels for the Company, NW Natural can improve its performance for these metrics.

Q. How does NW Natural's proposed utility capital structure compare with the natural gas peer group?

A. The Company's proposed capital structure is similar to the equity-to-capital ratio of its peer group identified by Ms. Nelson in the Company's Rate of Return on Equity Direct Testimony, Exh. JEN-1T. Specifically, the Company's gas proxy group has an average equity ratio of 53.58 percent over the last three years, and the Combined Proxy Group has a three-year average common equity ratio of 51.68 percent.

Q. What are NW Natural's current credit ratings?

A. Table 4, below, and Exh. BJW-3 show the Company's current ratings for each type of debt security from Moody's and Standard and Poor's Ratings ("S&P"), as well as the outlook issued by each agency.

Table 4. Current Ratings

	Moody's	S&P
Corporate credit rating	n/a	A+
Senior unsecured (long-term debt)	Baa1	n/a
Senior Secured (long-term debt)	A2	AA-
Commercial Paper	P-2	A-1
Outlook	Stable	Stable

Q. Please explain the implications of the credit ratings in terms of NW Natural's ability to access capital markets.

A. Generally speaking, companies with higher credit ratings will have greater access to investors at lower yields, given the lower risk profile of such companies. Lower-rated companies may find it difficult to access capital, or potentially pay significantly more (i.e., risk premium), especially in challenging capital market conditions. The capital market environment changes as macro business cycles move up and down, which creates tighter and looser access to capital. To ensure that the Company continues to have favorable pricing and access to capital markets during all market environments, it is imperative that the Company have strong investment grade credit ratings.

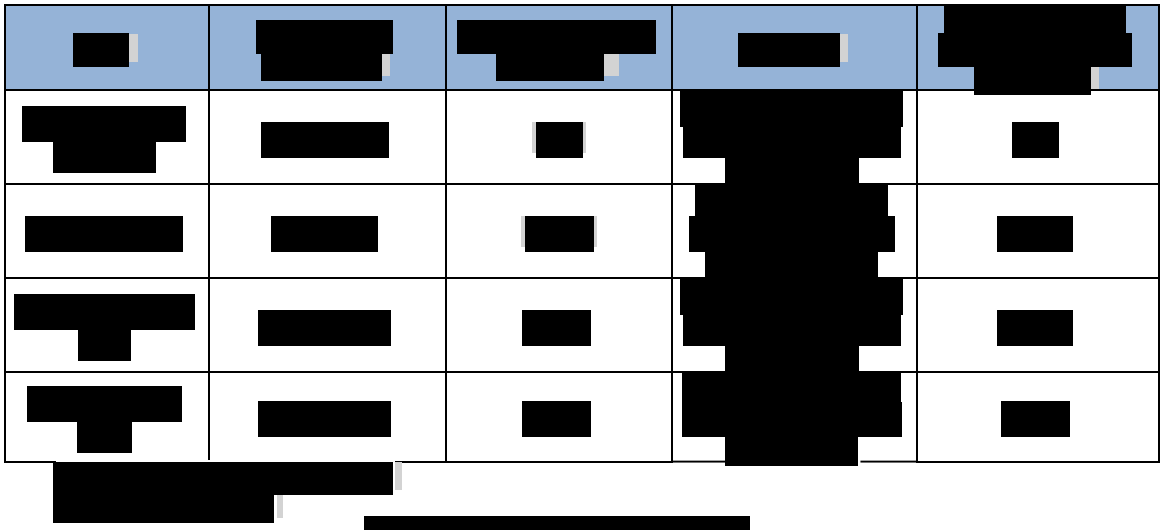
Q. Are there important factors that the rating agencies review in determining NW Natural's ratings?

A. Yes. Moody's and S&P rate the Company's debt based on their independent review of the Company's financial condition and credit metrics. Independent credit reviews

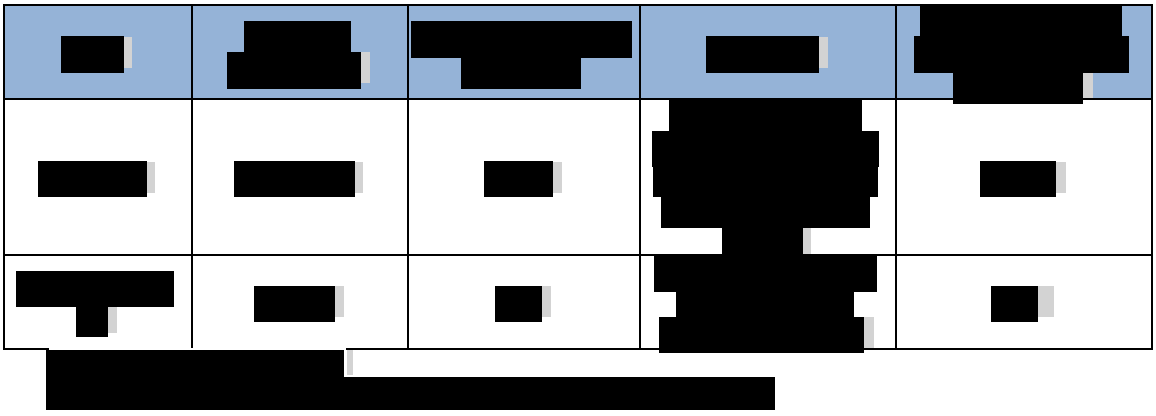
consist of qualitative and quantitative metrics—for example, the regulatory environment and cash flow metrics. Although each rating agency has a slightly different methodology for analyzing credit risk, many of the key financial ratios are similar and comparable.

Confidential Tables 5 and 6, below, display Moody's and S&P's benchmarks and consolidated NW Natural's financial forecast for the 2025 year-end ("YE") period.

[redacted]



[redacted]



Q. How do NW Natural's credit ratings benefit customers?

A. Investment grade credit ratings provide NW Natural access to capital to support capital improvements in order to maintain a high standard of safe and reliable systems and operation. Credit ratings that are higher than investment grade, as is the case with NW Natural, generally provide access to capital at comparatively lower interest rates. This allows customers to benefit from lower interest expense. In particular, access to capital markets in highly volatile or constrained conditions reduces the impacts that could occur from market disruptions that may otherwise have required more expensive capital raising to fund ongoing operations. NW Natural has proven over time that as a result of its strong credit, it has been able to access capital markets and fund its operations without material disruption or cost to customers even during challenging capital market times.

Q. How has NW Natural performed under Moody's credit metrics?

A. Moody's credit metrics are focused on understanding a company's cash flows and debt profile. Specifically, Moody's uses cash flow from operations ("CFO") as a key metric, because CFO reflects the cash generated from a company's ongoing, regular business or operating activities. To get a clearer picture, Moody's looks at CFO before changes in working capital ("CFO pre-W/C"), which removes the effect of short-term fluctuations in items like receivables and payables. Another important metric is "retained cash flow," which is CFO pre-W/C minus dividends paid to shareholders, since stopping or changing dividends can have significant implications, even if they are not mandatory like interest payments on a bond. Moody's also examines a company's leverage through the "debt to total capitalization" ratio, which shows how much of the

company's capital structure is funded by debt. Please see Table 7 below, which shows Moody's historical credit metrics for NW Natural.

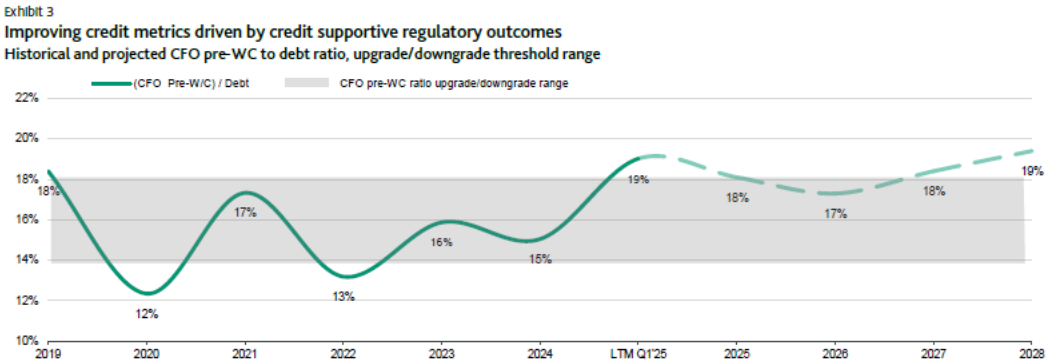
Table 7. Moody's Historical Credit Metrics for NW Natural

Moody's Metrics	2019	2020	2021	2022	2023	2024	LTM 3/31/2025	Downgrade Threshold	Upgrade Threshold
CFO Pre-W/C / Debt	18.4%	12.4%	17.3%	13.2%	15.9%	15.0 %	19.0%	14%	18%
Retained Cash Flow (CFO pre-WC – Dividends/Debt)	13.9%	8.5%	13.5%	9.0%	10.1%	10.8%	14.3%	7%	14%
Debt/Capitalization	51.2%	55.2%	52.5%	49.3%	50.0%	49.9%	44.8%	59% or more	50% or less

CFO = Cash Flow from Operations
W/C = working capital

Below is a table of historical and projected CFO pre-WC to Debt Ratio for NW Natural. NW Natural's ratio has fluctuated over the years, recently improving due to equity infusions from its parent company and improved cash flows. Prior periods were lower and fluctuated significantly based on the timing of debt issuances and or cash flows.

Table 8. Moody's Historical and Projected CFO pre-WC to Debt Ratio



For reference, the three peers Moody's has selected to compare with NW Natural average higher CFO pre-W/C to debt ratios (18.4 percent, with one peer averaging 24 percent) and lower debt to capitalization ratio (40.6 percent, with one peer averaging 35.4 percent).

According to Moody's methodology and specific scorecard for NW Natural, 40 percent of NW Natural's credit rating is based on these credit metrics. Because NW Natural's credit metrics have been weaker historically, it has been difficult for the Company to maintain its current senior unsecured long-term debt rating (Baa1) and the Company has not been able to achieve the higher rating (A3), despite qualifying in most other respects, except its credit metrics.

In addition to the financial metrics, Moody's report on July 30, 2024, cited credit challenges for NW Natural related to "[e]levated social risk due to higher scrutiny on natural gas as an energy source and long-term risks associated with environmental remediation costs and emission reduction requirements." Furthermore, Moody's stated that "[a] rating downgrade could occur if NW Natural's regulatory environment becomes less credit supportive, including material environmental challenges where costs cannot be recovered due to state emission reduction requirements." Moody's most recent report on July 8, 2025, cited, "A rating downgrade could also be considered if CFO pre-WC to debt is sustained below 14%." See Exh. BJW-2 for all referenced credit agency reports.

Q. How has NW Natural performed under S&P's credit metrics?

A. S&P evaluates NW Natural's creditworthiness primarily through two key financial metrics: Funds from Operations Divided by Debt ("FFO/Debt") and Debt/EBITDA (earnings before interest, taxes, depreciation and amortization). FFO/Debt is a ratio that measures a company's ability to cover its debt with cash generated by operations. Debt/EBITDA is a ratio that shows how many years it would take for a company to pay off its debt using earnings before interest, taxes, depreciation, and amortization.

NW Natural's credit metrics for S&P, like Moody's, have fluctuated and repeatedly been below the downgrade threshold over the past five years. Please see Table 9 below, which shows the key financial metrics used by S&P.

Table 9. S&P's Historical Credit Metrics for NW Natural

S&P's Metrics	2019	2020	2021	2022	2023	2024	Downgrade Threshold	Upgrade Threshold
FFO/Debt	18.9%	15.3%	15.3%	16.9%	14 .0%	14.6%	15%	21%
Debt/EBITDA	4.4	5.3	4.8	4.8	4.6	4.8	4x	3x

FFO = Funds From Operations

EBITDA = Earnings Before Interest, Taxes, Depreciation and Amortization

As shown in Table 9 above, NW Natural's FF/Debt ratio has fluctuated and has often been below S&P's downgrade threshold of 15 percent. In 2024, the ratio was 14.6 percent, which is lower than the peer average of 18.5 percent and below the level of two of the three peers, which were at 19 percent FFO/Debt or higher (based on peers disclosed in the S&P June 2025 report).

S&P's latest report on NW Natural on June 25, 2025, highlighted several risks that could lead to a downgrade. Per S&P: "We could lower our rating on NWNG [NW Natural Gas] over the next 24 months if the company's consolidated financial performance weakened such that FFO to debt remained consistently below 15%; or if the company's business risk increases. This could reflect higher risks due to decarbonization mandates and potential gas bans, a weakening of the company's effective management of regulatory risk, or an inability to consistently earn its authorized ROE." And in the previous report on June 24, 2024, S&P listed several key risks including "[c]ontinued negative discretionary cash flow over the next few years,

indicating external funding needs." See Exh. BJW-2 for all referenced credit agency reports.

As mentioned in the June 2025 report, S&P is focused on a company's ability to consistently earn its authorized ROE. But NW Natural has been earning below its authorized ROE for a number of years, and its underperformance has worsened in the recent past.

Q. How could NW Natural increase its credit metrics to continue to hold its current ratings and improve the liquidity of the organization to continue garnering capital?

A. There are two key ways to improve the Company's credit metrics. First is to improve the timely recovery of costs, which improves the cash flows of the business, and the other is to reduce the amount of debt of the Company. The recent improvements in the 2025 forecast are being largely driven by the higher equity layer of the business, resulting in lower reliance on debt.

Additionally, the Company also continuously monitors its funds from operations (FFO). The Company reviews and monitors items such as cash payments, accurate depreciation rates, timely collection of payments from customers, and swift recovery of deferrals.

Q. Have any of NW Natural's credit ratings changed since the Commission issued its order in the Company's last general rate case (UG-200994)?

A. No. There have not been any changes to NW Natural's credit ratings since the filing of the last general rate case, UG-200994. However, NW Natural has had outlook changes. Most recently, in the report issued for NW Natural on April 19, 2024, S&P

changed the outlook for NW Natural from negative to stable, and reaffirmed this stable outlook in June 2025. Historical ratings for each rating agency can be found in Exh. BJW-3.

Q. What reasons did S&P give for the stable outlook?

A. S&P originally moved NW Natural's outlook to negative in October 2023. S&P gave three primary reasons for the negative outlook. First, S&P noted that the Company's FFO (funds from operations) to debt ratio is near the low end of the range for its rating. This was attributed to challenges such as the COVID-19 pandemic, higher bad debt expenses, increased capital spending, and inflationary pressures, including higher operating costs. Second, S&P observed a gradual weakening of NW Natural's business risk profile, mainly due to the ongoing energy transition risks in Oregon and Washington associated with the implementation of decarbonization mandates. In particular, decarbonization mandates could negatively impact NW Natural's credit perspective to the extent decarbonization programs require NW Natural to finance costs ahead of recovery from customers rates. Lastly, S&P noted the Company's inability to consistently earn its authorized return on equity also weighed on the rating.

On April 19, 2024, S&P moved NW Natural's outlook back to stable, citing two main factors: (1) NW Natural's strong ring-fencing provisions, which help protect the utility's financial integrity; and (2) S&P's expectation that NW Natural Gas Company's financial measures, particularly the FFO to debt ratio, will remain above their downgrade threshold (15 percent) and within the 15 percent to 18 percent through 2026. S&P reaffirmed the stable outlook in its June 25, 2025 report. Despite the stable outlook, the cash flow metrics and the risks noted by S&P persist and must be closely

managed in order for the Company to continue garnering strong investment grade ratings.

III. LONG-TERM DEBT AND SHORT-TERM DEBT

Q. How was the cost of long-term debt calculated for the Test Year?

A. The cost of long-term debt for the Test Year was determined using the details provided in confidential Exh. BJW-4C, which lists all of the Company's outstanding long-term debt as of March 31, 2025, totaling ($1,375 million as of March 31, 2025). The corresponding weighted average cost of this debt was calculated to be 4.697 percent for the Test Year. The cost of long-term debt includes only existing debt at the end of the Test Year. The weighted average cost of long-term debt was calculated by multiplying the debt outstanding by the average cost for each debt issue.

The effective interest rate for each debt issue, shown in Column (o) of confidential Exh. BJW-4C, tabs "ECOD March 2025" through "COD – 2029," reflects the total annualized expense of each individual issue, which represents the total cost of issue, including coupon rate, premiums or discounts, underwriter's commissions, gains and losses on interest rate hedges, and other expenses related to the issue such as legal fees and unamortized debt discounts and early redemption premiums assigned to refunding issuances. Unamortized debt discounts and early redemption premiums from previously outstanding debt issuances are carried over to the new debt issuance because the Company was able to achieve a lower annualized cost of debt due to net present value savings from the early redemption.

Q. How was the cost of short-term debt calculated for the Test Year?

A. The cost of short-term debt was calculated in a similar manner to long-term debt, using details in confidential Exh. BJW-5C and the corresponding embedded cost (6.33 percent) for test year 13-month AMA ending March 31, 2025. The cost of short-term debt was calculated by multiplying the 13-month AMA short-term debt outstanding by its 13-month AMA average cost and fees for each debt issue.

Northwest Natural Gas Company

Update following rating affirmation

Summary

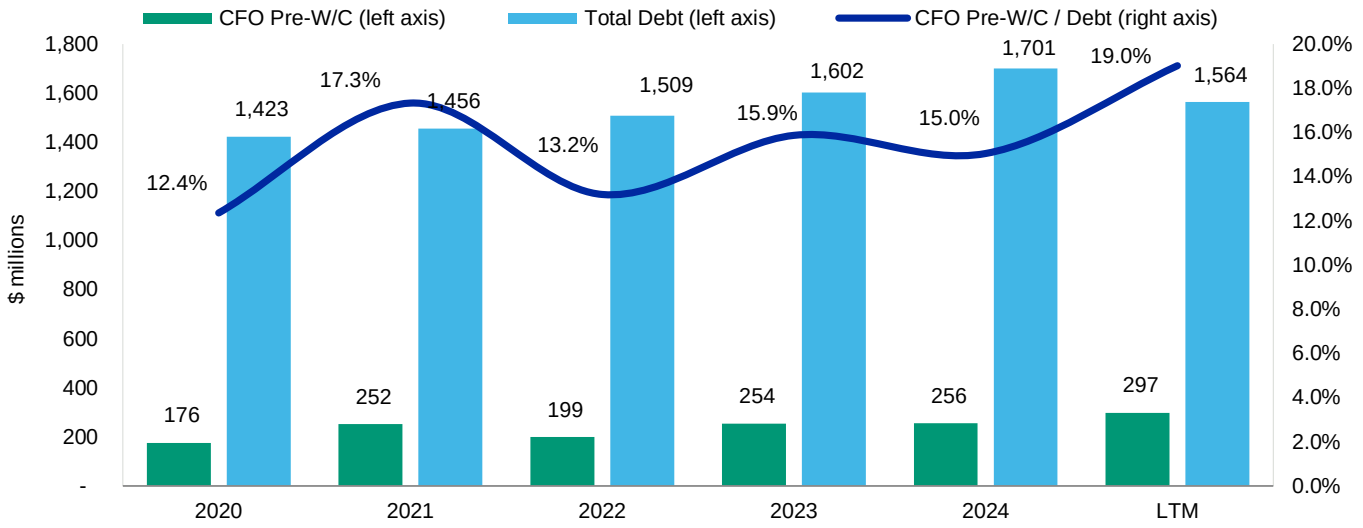
Northwest Natural Gas Company's (NW Natural, Baa1 stable) credit profile incorporates the company's low business risk as a local gas distribution company (LDC) operating in generally supportive regulatory environments. In particular, Oregon's suite of cost recovery mechanisms and constructive stakeholder relationships have supported NW Natural's solid, albeit volatile, cash flow generation over the last several years.

We expect NW Natural's financial performance to improve over the next several years driven by timely cash flow generation and credit supportive regulatory proceedings. The utility's cash flow from operations before changes in working capital (CFO pre-WC) to debt ratio has averaged about 15% over the last three years, ending at 15% in 2024. As of the last twelve months ending 31 March 2025, the ratio increased to 19%.

The recent improvement is attributed to stronger cash flow generation and temporarily reduced debt levels, aligning the utility's capital structure to a higher equity layer of 52%, as filed in their most recent general rate case. NW Natural entered into a stipulation, subject to commission approval, with parties in its 2025 rate case that includes a 50% equity layer as well as a 9.5% ROE (increase from 9.4%) and a $21 million revenue increase. Although we view a higher equity ratio as a credit positive because it supports higher required revenue and reduces reliance on debt, which helps to support stronger credit metrics, we view the 2025 rate case settlement as constructive.

Because of its supportive regulatory outcomes, we expect NW Natural's financial profile to improve over the next several years. We estimate that the CFO pre-WC to debt ratio will range between 16% and 18% over the next 12 to 18 months with a stronger longer-term run rate ranging between 17% and 19%. These estimates include an about $1.6 billion capital expenditure plan (2025-2029), which is consistent with the last five-year capex spend of $1.5 billion (2019-2024). We estimate funding at 50% equity and 50% debt as in prior years.

Exhibit 1
Historical CFO Pre-WC, Total Debt and CFO Pre-WC to Debt ($ MM)



LTM= Last Twelve Months
Source: Moody's Financial Metrics™

Credit strengths

» Low business risk local gas distribution company

» Improving financial metrics

» Supportive regulatory jurisdictions, including cost tracking mechanisms and legislation that can help investment prospects

Credit challenges

» Historically volatile financial metrics

» CFO pre-W/C to debt has been below 14% downgrade threshold in some years

» Heightened social risk due to state led decarbonization goals

Rating outlook

The stable outlook reflects our expectation that NW Natural's track record of supportive regulatory outcomes will continue over the next several years. We expect credit metrics to improve to levels that are more commensurate with its current ratings, including a ratio of CFO pre-WC to debt ranging between 16% and 18% over the next 12 to 18 months with a stronger longer-term run rate in the 17% to 19% range.

Factors that could lead to an upgrade

A rating upgrade could occur if NW Natural's regulatory environment remains credit supportive and metrics improve such that its CFO pre-WC to debt ratio increases to 18% or above on a sustained basis.

Factors that could lead to a downgrade

A rating downgrade could occur if NW Natural's regulatory environment becomes less credit supportive. A rating downgrade could also be considered if CFO pre-WC to debt falls below 14%.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on https://ratings.moodys.com for the most updated credit rating action information and rating history.

Profile

Northwest Natural Gas Company (NW Natural) is a natural gas local distribution company (LDC), serving 807,000 customers in Oregon (about 88% of utility margins) and Washington (about 12% of utility margins). NW Natural is regulated by the Oregon Public Utility Commission (OPUC) and the Washington Utilities and Transportation Commission (WUTC).

NW Natural's parent, Northwest Natural Holding Company (NW Holdings), is a holding company headquartered in Portland, Oregon and owns NW Natural (largest subsidiary), SiEnergy, NW Natural Water Company, LLC (NW Natural Water), NW Natural Renewables Holdings, LLC (NW Natural Renewables), and other businesses and activities.

Detailed credit considerations

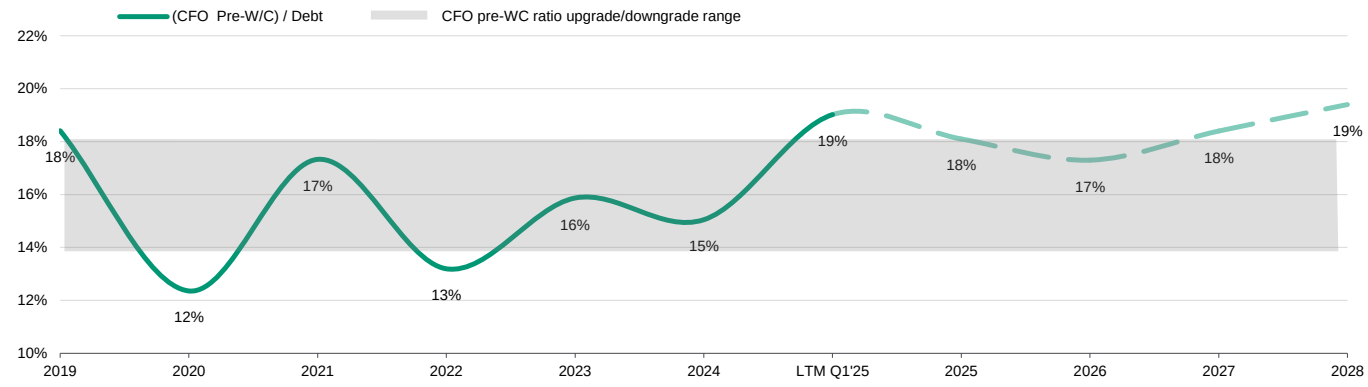
Improving financial performance driven by constructive regulatory proceedings

Over the past five years, NW Natural's credit metrics have experienced significant volatility, primarily driven by one-time events and the company's strategic investments in technology. These investments increased regulatory lag, with the utility's CFO pre-working capital (pre-WC) to debt ratio averaging approximately 15% from 2020 through 2024, falling below the 14% downgrade threshold in some years. However, in its 2024 general rate case, NW Natural received regulatory approval to recover these investments. Combined with a temporary reduction in debt, this led to a recent improvement in the CFO pre-WC to debt ratio, which rose to 19% on a last twelve months ending 31 March 2025.

We expect NW Natural's credit metrics to improve over the next several years driven by more timely recovery of cash flow as a result of supportive general rate case outcomes. As shown in Exhibit 3, we project the CFO pre-WC to debt ratio for the next 12 to 18 months to be between 16% and 18% with a longer-term run rate ranging between 17% and 19%, at or slightly above the 18% upgrade threshold. These estimates include capital expenditures for the next five years (2025-2029) of about $1.6 billion, an average of about $320 million annually. This compares to about $1.5 billion, or an average of about $300 million annually, from 2020 to 2024.

Exhibit 3

Improving credit metrics driven by credit supportive regulatory outcomes
Historical and projected CFO pre-WC to debt ratio, upgrade/downgrade threshold range



The range indicated is one of several factors that could lead to an upgrade or downgrade of the ratings if the CFO pre-WC to debt ratio is above or below the level for a sustained period
Source: Moody's Ratings

The utility had two years (2020 and 2022) where CFO pre-WC to debt dropped below 14%. In 2020, the utility's cash flow was affected by the coronavirus pandemic as well as debt levels that increased to ensure adequate liquidity that year amid pandemic uncertainties. The pandemic-related debt was subsequently repaid in 2021. In 2022, the weak metrics were due to cost inflation pressures, primarily within materials used in field work, higher natural gas prices and related short term debt to cover these gas costs. Notably, these were pressures that plagued the entire industry during most of 2022. Favorably, the utility was able to recover the deferred costs within a year as reflected in its stronger credit metrics for 2023.

Supportive legislative and regulatory framework in both Oregon and Washington

NW Natural's low business risk profile is supported by gas distribution operations that receive supportive regulatory treatment from the Oregon Public Utility Commission (OPUC) and Washington Utilities and Transportation Commission (WUTC), which allows for several cost recovery mechanisms that help provide stability and predictability of the utility's cash flow.

Oregon

Since 88% of the utility's margins are derived from Oregon customers, the legislative and regulatory support that NW Natural receives from the OPUC is a fundamental credit driver. In general, NW Natural has cooperative relationships with stakeholders in the state and has been able to negotiate supportive rate case outcomes and obtain tracking mechanisms for its most material costs.

The most important cost recovery mechanisms include: the use of forward test years for capital expenditures; a weather adjusted rate mechanism (WARM); a conservation tariff (i.e., revenue decoupling); purchased gas adjustment (PGA); utility gas reserve investments included in rate base; and a Site Remediation and Recovery Mechanism (SRRM), primarily for the recovery of manufactured gas plant environmental expenditures. These various cost recovery mechanisms help support recovery of the most significant costs that NW Natural faces.

The utility filed its most recent Oregon general rate case in December 2024 and entered into a stipulation, subject to commission approval, with parties that included a 50% equity layer as well as a 9.5% ROE (increase from 9.4%) and a $21 million revenue increase. NW Natural's original request included a $59.4 million revenue increase, a 10.4% ROE and 52% equity layer. Because the utility requested a higher equity layer, NW Natural reduced its debt to align with the requested capital structure. Although we view a higher equity ratio as more credit supportive, we view the stipulated filing as credit supportive despite the 50% equity ratio and lower revenue increase than requested.

NW Natural's last general rate case concluded in an all-party settlement agreement, that was approved by the OPUC in October 2024. The order authorized a $95 million revenue increase (10.2%) and a 9.4% ROE and 50% equity layer. The initial request included a $154.9 million revenue increase (16.6%), a 10.10% ROE, 50% equity layer and a $2.14 billion rate base. NW Natural's initial filing represented the largest base rate increase requested in recent years, underscoring the inflationary pressures that the utility was facing.

Washington

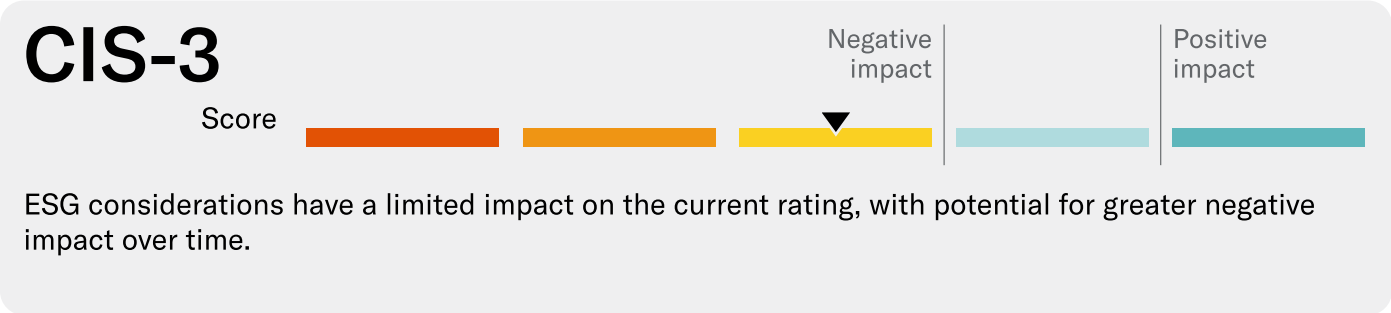
In October 2021, it most recent rate order, the WUTC authorized an annual revenue requirement increase over two years; a 6.4% or $5 million increase in the first year, effective 1 November 2021, and up to a 3.5% or $3 million increase in the second year beginning 1 November 2022. The order was based on an average rate base of $247.3 million.

The filing was based on system investments including costs associated with resiliency and reliability, consumer focused technology and building improvements and upgrades. The WUTC order did not specify the underlying inputs of the cost of capital such as capital structure and ROE. This multiyear rate case was filed for the recovery of investments and costs for system resiliency and reliability as well as for headquarter leasehold improvements and rent costs. It also provided for recovery of upgrades to the Vancouver, Washington service center.

ESG considerations

Northwest Natural Gas Company's ESG credit impact score is CIS-3

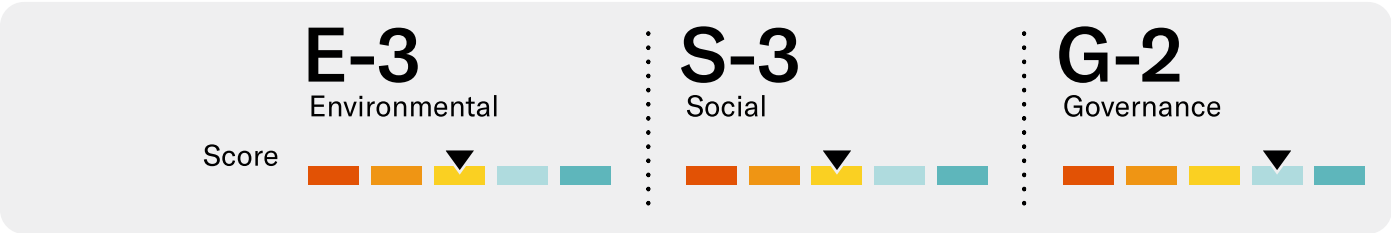
Exhibit 4
ESG credit impact score



Source: Moody's Ratings

NW Natural's **CIS-3** indicates its ESG considerations that have a limited impact on the current rating, with greater potential for future negative impact over time. The utility's scores reflect a combination of higher risk exposure to carbon transition, physical climate and demographic and societal trends.

Exhibit 5
ESG issuer profile scores



Source: Moody's Ratings

Environmental

NW Natural's **E-3** issuer profile score is driven by its higher risk exposure to carbon transition and physical climate risks. Favorably, the company has a strong track record of meeting established emissions targets set by legislative (Oregon Senate Bill 98) and regulatory policies. NW Natural established a Low Carbon Savings goal of 30% by 2035 that includes customers emissions and a goal of being a carbon neutral provider by 2050. This will be achieved through increasing the use of renewable natural gas as well as hydrogen blending. Although the utility is exposed to moderately high physical climate risks, the company worked to mitigate these risks by removing all bare steel pipe from its system by completing the multi-year investment in 2015. Additionally, the system is predominantly underground, which makes the infrastructure more resilient and less vulnerable to weather or other events that could disrupt power to the region.

Social

NW Natural's **S-3** issuer profile score reflects higher risk to responsible production and demographics and societal trends that increase public concern over environmental, social, or affordability issues that could lead to adverse regulatory political intervention. These risks are balanced by neutral to low exposure to health and safety, human capital, and customer relations. NW Natural has historically worked collaboratively with its regulator to make energy transition as affordable as possible for customers and we see this trend continuing as the company executes on its energy transmission goals over the next several years. Additionally, the company has a strong hedging program including storage and contracts that draw from a diverse supply to ensure reliability and reduce commodity risk

Governance

NW Natural's **G-2** issuer profile score is broadly in line with other utilities and does not pose a particular risk. This is supported by neutral to low exposure to financial strategy and risk management and management credibility and track record.

ESG Issuer Profile Scores and Credit Impact Scores for the rated entity/transaction are available on Moodys.com. In order to view the latest scores, please click here to go to the landing page for the entity/transaction on MDC and view the ESG Scores section.

Liquidity analysis

NW Natural maintains adequate liquidity through the use of external credit facilities and market issuances to fund negative free cash flow. As of the last twelve months ending 31 March 2025, NW Natural's internal liquidity included about $82 million of cash on hand and produced about $290 million in cash flow from operations; this compares to about $365 million in capital expenditures and $70 million in dividends for the same last twelve month period, resulting in approximately $150 million of negative free cash flow.

The utility has access to a $400 million revolving credit agreement. In December 2024, the agreement was amended with a new maturity date of 3 November 2027, with an option to extend one additional year, subject to lender approval. The credit agreement includes a feature that allows NW Natural to request an increase in the total amount up to $600 million. The credit agreement also permits the issuance of letters of credit in an aggregate amount of up to $60 million.

In January 2024, the utility entered into an uncommitted letter of credit and reimbursement agreement. Although there is no expressly stated maximum amount of letters of credit that can be issued or outstanding under the facility due to current regulatory authority from the OPUC, the sum of LCs outstanding cannot exceed $100 million at any one time. As of 31 March 2025, NW Natural did not have any outstanding balance drawn under its credit facility or letters of credit. The primary restrictive covenant for both agreements requires the company to maintain a debt to capitalization ratio of 70% or less, which NW Natural was in compliance with at 31 March 2025 (47.4%).

NW Natural's next debt maturities are in September 2025 and December 2025, when $20 million and $10 million of senior secured notes are due, respectively.

Credit Highlights

Overview

Key strengths	Key risks
Low-risk natural gas distribution operations with limited unregulated storage operations.	Limited geographic and regulatory diversity.
Effective management of regulatory risks with operations under the credit-supportive regulatory frameworks in Washington and Oregon.	Decarbonization initiatives that pressure future growth.
Insulating measures that we assess as sufficient to rate the company above its parent's group credit profile.	Continued negative discretionary cash flow over the next few years, indicating external funding needs.

We continue to monitor the ongoing Oregon rate case proceedings. On June 23, 2025, Northwest Natural Gas Co. (NWNG), and certain parties filed a stipulation in the company's 2024 rate case filing for a revenue increase of $21.3 million (about 35% of the company's original request). The stipulation is based on a modestly improved return on equity (ROE) of 9.5% and maintaining the 50% equity structure. While the stipulated revenue increase appears modest, it is in line with our base-case expectations, and we believe it will continue to support credit quality. We expect the stipulation, subject to approval by the Public Utility Commission of Oregon (OPUC), will be in effect by year-end 2025. We also believe items not addressed in the

stipulation, will be subject to ongoing litigation process. This current filing follows a $95 million rate case order based on a settlement that was approved in late 2024. We assessed this previous rate case order as supportive of credit quality and expect that the company will continue to effectively manage regulatory risk.

We view the insulating measures in place as sufficient to rate NWNG two-notches above the 'a-' group credit profile on parent Northwest Natural Holding Co. (NWNH). Our analysis incorporates our 'a+' stand-alone credit profile (SACP) on NWNG and the cumulative value of the insulating and regulatory measures in place. NWNG has the following insulating measures:

- NWNG's financial performance and funding prospects are independent from those of NWNH.
- NWNG issues its own debt and has its own credit facility.
- NWNG is regulated by the Oregon and Washington regulatory commissions.
- NWNG has dividend restrictions. It must maintain 45% equity before distributing any dividends upstream if its secured issue-level ratings are below 'A-', maintain 46% equity if its secured issue-level ratings are below 'BBB'. No dividends are allowed if its equity falls below 44% or the secured issue-level ratings drop below 'BBB-'.
- NWNG's board of directors is highly independent with eight independent directors on a board of 10.
- Independent directors on NWNG's board have effective influence on decisions, and their votes are required for a voluntary bankruptcy filing.
- NWNG is unlikely to be drawn or forced into a NWNH bankruptcy due to absence of cross-default provisions.
- An independent third party holds the "golden share" vote required to file for a bankruptcy filing.

Outlook

The stable rating outlook on NWNG reflects our base-case assumption that the company will generate sufficient cash flow to maintain appropriate consolidated financial measures for the current rating, including funds from operations (FFO) to debt of 15%-17% through 2027. The stable outlook also reflects our expectation of continued strong operating performance and effective management of regulatory risk.

Downside scenario

We could lower our rating on NWNG over the next 24 months if:

- The company's consolidated financial performance consistently weakens such that FFO to debt falls below 15%; or
- The company's business risk increases. This could reflect higher risks due to decarbonization mandates and potential gas bans, a weakening of the company's effective management of regulatory risk, or an inability to consistently earn its authorized ROE.

Upside scenario

We could raise our rating on NWNG over the next 12-24 months if the company's financial performance improves such that FFO to debt is consistently above 21%, with no increase to business risk.

Our Base-Case Scenario

Assumptions

- Modest customer growth and continued use of regulatory mechanisms.
- Continued negative discretionary cash flow through 2027.
- Annual capital spending averaging about $350 million through 2027.
- Annual dividends averaging about $85 million.
- All debt maturities refinanced.

Business Risk

We assess NWNG's business risk based on its low-risk regulated gas distribution operations accounting for about 95% of consolidated operating revenue, residential-focused customer base, and effective management of regulatory risks.

The company benefits from stable and supportive regulatory environments in both jurisdictions in which it operates, with purchased gas adjustments and environmental cost recovery, decoupling, and a forward-looking test year in Oregon and multiyear rate case fillings in Washington. We view these mechanisms as supportive of its financial measures, allowing the company to mitigate regulatory lag. In addition, 90% of the margin is generated from residential and commercial customers, providing a stable margin profile.

Northwest Natural Gas Co.'s natural gas distribution by segment

Financial Risk

Under our base case, we assess NWNG using our low-volatility table, reflecting the low-risk nature of its natural gas distribution operations and effective management of regulatory risk. NWNG's 2024 stand-alone FFO to debt was 14.6%, and we expect it to strengthen modestly over our forecast period but remain in the middle of the range for its financial risk profile category. Specifically, we project FFO-to-debt in the range of 15%-17% through 2027. Our assumptions include the 2024 and 2025 Oregon rate case increases, annual capital spending averaging about

$350 million, and annual dividends averaging about $85 million through 2027. We expect a majority of the capital spending to fund replacing and improving system reliability.

Liquidity

As of March 31, 2025, we assess NWNG's liquidity as adequate, with sources covering uses by more than 1.1x over the coming 12 months, even if forecast consolidated EBITDA declines 10%. We believe the predictable regulatory framework for NWNG provides a manageable level of cash flow stability even in times of economic stress, supporting our use of slightly lower thresholds to

assess liquidity. In addition, NWNG can absorb high-impact, low-probability events, reflecting that the company maintains about $400 million in committed credit facilities through 2027. It also reflects our belief that the company can lower its high capital spending (averaging about $350 million annually through 2027) during stressful periods, indicating a limited need for refinancing under such conditions. Furthermore, our assessment reflects the company's generally prudent risk management and sound relationships with its banking group (which includes over four well-established banks).

Overall, we believe that the company can withstand adverse market circumstances over the next 12 months, with sufficient liquidity to meet its obligations. The company has no big long-term debt maturity coming due, and we expect it to proactively address this maturity well in advance of its scheduled due date.

Principal liquidity sources

- Cash and cash equivalents of about $81.8 million as of March 31, 2025;
- Credit facility availability of about $400 million; and
- Cash FFO estimated of about $280 million.

Principal liquidity uses

- Debt maturities of about $30 million;
- Capital expenditure of about $360 million; and
- Dividend payments of about $80 million

Environmental, Social, And Governance

ESG factors have no material influence on our credit rating analysis of NWNG.

Group Influence

Under our group rating methodology, we consider NWNH as the parent of the group with a GCP of 'a-'. We assess NWNG as a core subsidiary of NWNH because we view the utility as integral to the group's identity, highly unlikely to be sold, and having a strong commitment from NWNH's senior management, given the company's emphasis on maintaining its strategic focus on regulated gas distribution operations.

That said, our issuer credit rating on NWNG is two notches above the parent's GCP. Because NWNG is operationally separate from NWNH and there are certain regulatory restrictions in place, which we view the utility as having sufficient insulating measures that allow NWNG to be rated up to two notches above the NWNH's GCP. These regulatory protections include dividend restrictions, a highly independent board, and an independent third party that is the holder of the "golden share" whose vote is required to file for bankruptcy.

Issue Ratings--Subordination Risk Analysis

Capital structure

The short-term rating on NWNG is 'A-1' based on our 'A+' issuer credit rating on the company.

Analytical conclusions

We rate the company's medium-term notes program 'A+', equal to its issuer credit rating, because we view any debt issued under this program as debt issued by a qualifying investment-grade utility.

Issue Ratings--Recovery Analysis

Key analytical factors

NWNG's first-mortgage bonds benefit from a first-priority lien on substantially all of the utility's real property, owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating one notch above the issuer credit rating.

MOODY'S
RATINGS

Rating Action: Moody's Ratings affirms Northwest Natural Gas Company's ratings; outlook stable

02 Jul 2025

Approximately $1.4 billion of debt instruments affected

New York, July 02, 2025 -- Moody's Ratings (Moody's) has affirmed Northwest Natural Gas Company's (NW Natural) ratings, including its A2 senior secured rating, (P)Baa1 senior unsecured shelf rating and P-2 short-term rating for commercial paper. The outlook is stable. A full list of affected ratings is included at the end of this press release.

RATINGS RATIONALE

"We expect NW Natural's financial performance to improve over the next several years driven by timely cash flow generation and credit supportive regulatory proceedings," stated Edna Marinelarena, Moody's Ratings Assistant Vice President. The utility's cash flow from operations before changes in working capital (CFO pre-WC) to debt ratio has averaged about 15% over the last three years, ending at 15% in 2024. As of the last twelve months ending 31 March 2025, the ratio increased to 19%.

The recent improvement is attributed to stronger cash flow generation and temporarily reduced debt levels, aligning the utility's capital structure to a higher equity layer of 52%, as filed in their most recent general rate case. NW Natural entered into a stipulation, subject to commission approval, with parties in its 2025 rate case that included a 50% equity layer as well as a 9.5% ROE (increase from 9.4%) and a $21 million revenue increase. Although we view a higher equity ratio as a credit positive because it supports higher required revenue and reduces reliance on debt, which helps to support stronger credit metrics, we view the 2025 rate case settlement as constructive.

Because of its supportive regulatory outcomes, we expect NW Natural's financial profile to improve over the next several years. We estimate that the CFO pre-WC to debt ratio will range between 16% and 18% over the next 12 to 18 months with a stronger longer-term run rate ranging between 17% and 19%. These estimates include an about $1.6 billion capital expenditure plan (2025-2029), which is consistent with the last five-year capex spend of $1.5 billion (2019-2024). We estimate funding at 50% equity and 50% debt as in prior years.

The ratings incorporate NW Natural's low business risk as a local gas distribution company (LDC) operating in generally supportive regulatory environments. Oregon's suite of cost recovery mechanisms and constructive stakeholder relationships have supported NW Natural's solid, albeit volatile, cash flow generation over the years.

Outlook

The stable outlook reflects our expectation that NW Natural's track record of supportive regulatory outcomes will continue over the next several years. We expect credit metrics to improve to levels that are more commensurate with its current ratings, including a ratio of CFO pre-WC to debt ranging between 16% and 18% over the next 12 to 18 months with a stronger longer-term run rate in the 17% to 19% range.

FACTORS THAT COULD LEAD TO AN UPGRADE OR DOWNGRADE OF THE RATINGS

Factors that could lead to an upgrade

A rating upgrade could occur if NW Natural's regulatory environment remains credit supportive and metrics improve such that its CFO pre-WC to debt ratio increases to 18% or above on a sustained basis.

Factors that could lead to a downgrade

A rating downgrade could occur if NW Natural's regulatory environment becomes less credit supportive. A rating downgrade could also be considered if CFO pre-WC to debt falls below 14%.

Northwest Natural Gas Company (NW Natural) is a natural gas local distribution company (LDC), serving 807,000 customers in Oregon (about 88% of utility margins) and Washington (about 12% of utility margins). NW Natural is regulated by the Oregon Public Utility Commission (OPUC) and the Washington Utilities and Transportation Commission (WUTC).

NW Natural's parent, Northwest Natural Holding Company (NW Holdings), is a holding company headquartered in Portland, Oregon and owns NW Natural (largest subsidiary), SiEnergy, NW Natural Water Company, LLC (NW Natural Water), NW Natural Renewables Holdings, LLC (NW Natural Renewables), and other businesses and activities.

The principal methodology used in these ratings was Regulated Electric and Gas Utilities published in August 2024 and available at https://ratings.moodys.com/rmc-documents/426183. Alternatively, please see the Rating Methodologies page on https://ratings.moodys.com for a copy of this methodology.

The net effect of any adjustments applied to rating factor scores or scorecard outputs under the primary methodology(ies), if any, was not material to the ratings addressed in this announcement.

REGULATORY DISCLOSURES

For further specification of Moody's key rating assumptions and sensitivity analysis, see the sections Methodology Assumptions and Sensitivity to Assumptions in the disclosure form.

Moody's Rating Symbols and Definitions can be found on https://ratings.moodys.com/rating-definitions.

For any affected securities or rated entities receiving direct credit support/credit substitution from another entity or entities subject to a credit rating action (the supporting entity), and whose ratings may change as a result of a credit rating action as to the supporting entity, the associated regulatory disclosures will relate to the supporting entity. Exceptions to this approach may be applicable in certain jurisdictions.

For ratings issued on a program, series, category/class of debt or security, certain regulatory disclosures applicable to each rating of a subsequently issued bond or note of the same series, category/class of debt, or security, or pursuant to a program for which the ratings are derived exclusively from existing ratings, in accordance with Moody's rating practices, can be found in the most recent Credit Rating Announcement related to the same class of Credit Rating.

For provisional ratings, the Credit Rating Announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating.

Moody's does not always publish a separate Credit Rating Announcement for each Credit Rating assigned in the Anticipated Ratings Process or Subsequent Ratings Process.

These ratings are solicited. Please refer to Moody's Policy for Designating and Assigning Unsolicited Credit Ratings available on its website https://ratings.moodys.com.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

The Global Scale Credit Rating(s) discussed in this Credit Rating Announcement was(were) issued by one of Moody's affiliates outside the EU and UK and is(are) endorsed for use in the EU and UK in accordance with the EU and UK CRA Regulation.

Please see https://ratings.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the issuer/deal page on https://ratings.moodys.com for additional regulatory disclosures for each credit rating.

Northwest Natural Gas Company

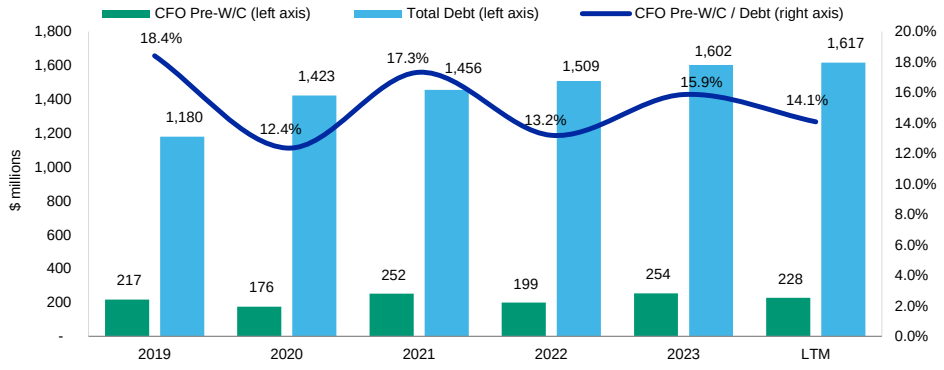
Update to credit analysis

Summary

Northwest Natural Gas Company's (NW Natural, Baa1 stable) credit profile reflects the low business risk nature of its business as a local gas distribution company (LDC) operating in generally constructive regulatory environments. In particular, Oregon's suite of cost recovery mechanisms and constructive stakeholder relationships have supported the utility's solid cash flow generation and financial metrics.

Because of its supportive regulatory outcomes, NW Natural has historically sustained credit metrics, including a cash flow from operations before changes in working capital (CFO pre-WC) to debt ratio, in the mid to high teens range over the last several years. The years of financial declines were due to one time events including the coronavirus pandemic (2020) and an increase in commodity prices that drove an increase in gas cost deferrals (2022). Favorably, the utility was authorized full recovery of these costs thereby driving the improvement in the utility's credit metrics in 2023. We expect NW Natural's financial profile to remain consistent over the next several years.

Exhibit 1
Historical CFO Pre-WC, Total Debt and CFO Pre-WC to Debt ($ MM)



Source: Moody's Financial Metrics™

Credit strengths

» Low business risk local gas distribution company

» Supportive regulatory jurisdiction, including cost tracking mechanisms and legislation that can help investment prospects

» Good stakeholder relationships and ongoing dialogue to resolve most issues

Credit challenges

» Elevated social risk due to higher scrutiny on natural gas as an energy source

» Long-term risks associated with environmental remediation costs and emission reduction requirements

Rating outlook

The stable outlook reflects our expectation that NW Natural's track record of solid financial performance and credit supportive regulatory outcomes will continue over the next several years. We see credit metrics sustaining at levels sufficient for the current credit profile including a ratio of CFO pre-WC to debt in the mid-teens percent range over the longer-term.

Factors that could lead to an upgrade

A rating upgrade could occur if NW Natural's credit metrics improve such that CFO pre-WC to debt ratio increases to 18% and CFO pre-WC less dividends to debt is consistently above 14%.

Factors that could lead to a downgrade

A rating downgrade could occur if NW Natural's regulatory environment becomes less credit supportive, including material environmental challenges where costs cannot be recovered due to state emission reduction requirements. A rating downgrade could also be considered if CFO pre-WC to debt is sustained below 14%.

Key indicators

Profile

Northwest Natural Gas Company (NW Natural) is a natural gas local distribution company (LDC), serving 800,000 customers in Oregon (about 88% of utility margins) and Washington (about 12% of utility margins). NW Natural is regulated by the Oregon Public Utility Commission (OPUC) and the Washington Utilities and Transportation Commission (WUTC).

NW Natural's parent, Northwest Natural Holding Company (NW Holdings), is a holding company headquartered in Portland, Oregon and owns NW Natural, NW Natural Water Company, LLC (NWN Water), NW Natural Renewables Holdings, LLC, and other businesses and activities. NW Natural is NW Holdings' largest subsidiary and an illustrative organizational chart is shown in Exhibit 3.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on https://ratings.moodys.com for the most updated credit rating action information and rating history.

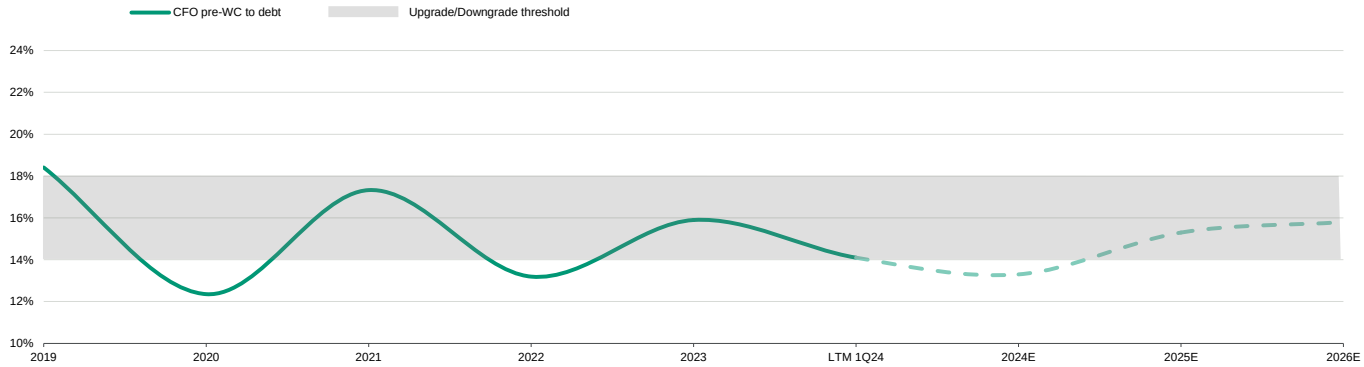
Detailed credit considerations

Consistent track record of solid financial performance expected to continue

NW Natural has a strong track record of producing solid financial performance as a result of its credit supportive regulatory framework and balanced fiscal policies. Over the last five years, the utility averaged about $220 million in cash flow from operations. This led to an average CFO pre-WC to debt ratio of about 15% from 2019 to 2023. As of the last twelve months ending 31 March 2024, the ratio was about 14%, as shown in Exhibit 4.

For 2024, credit metrics may fall to about 13% due to higher debt issued in 2023 and pressured cash flow due to higher O&M costs. NW Natural has a pending general rate case that is expected to conclude in a constructive manner with new rates effective November 2024; coupled with lower capital expenditures starting in 2025, we see credit metrics including its CFO pre-WC to debt ratio improving and sustaining in the 15% range over the next several years.

Exhibit 4
Consistent credit metrics expected over next several years
Historical and projected CFO pre-WC to debt ratio, upgrade/downgrade threshold range



The range indicated is one of several factors that could lead to an upgrade or downgrade of the ratings if the CFO pre-WC to debt ratio is above or below the level for a sustained period.
Source: Moody's Ratings

NW Natural's capital expenditures have averaged about $275 million from 2019 to 2023. In 2022 and 2023, capital spending increased to $319 million and $291 million, respectively. For 2024, NW Natural is projecting about $360 million. Capex has increased largely due to investments in technology of which much of it was related to the federal cybersecurity mandates. With the conclusion of these major projects, from 2025 to 2027, capital expenditures are projected to decrease totaling about $900 million or an average of about $225 million annually.

The utility had two years over this period where credit metrics dropped below 14% (its established downgrade threshold). In 2020, the utility's cash flow was affected by the impacts from the coronavirus pandemic as well as debt levels that increased to ensure adequate liquidity for the year amid the pandemic uncertainties. The pandemic-related debt was subsequently repaid in 2021. In 2022, the weaker metrics were due to cost inflation pressures, primarily within the materials used in field work, higher natural gas prices and related short term debt to cover the initial cost. Notably, these were pressures that plagued the industry during most of 2022. Favorably, the utility was able to recover the deferred costs within a year as reflected in its stronger credit metrics for 2023.

Supportive legislative and regulatory framework in Oregon and Washington

NW Natural's low business risk profile is supported by gas distribution operations that receive supportive regulatory treatment from the Oregon Public Utility Commission (OPUC) and Washington Utilities and Transportation Commission (WUTC), which allows for several cost recovery mechanisms that help provide stability and predictability of the utility's cash flow.

Oregon

Since 88% of the utility's margins are derived from Oregon customers, the legislative and regulatory support that NW Natural receives from the OPUC is a fundamental credit driver for the utility. In general, NW Natural has cooperative relationships with stakeholders in the state and has been able to negotiate constructive rate case outcomes and acquire tracking mechanisms for its most material costs.

The most important cost recovery mechanisms include: NW Natural's use of forward test years for capital expenditures; weather adjusted rate mechanism (WARM); conservation tariff (i.e., revenue decoupling); purchased gas adjustment (PGA); utility gas reserve investments included in rate base; and a Site Remediation and Recovery Mechanism (SRRM), primarily for the recovery of manufactured gas plant environmental expenditures. These various cost recovery mechanisms help support recovery of the most significant costs that NW Natural faces.

The utility filed its most recent Oregon general rate case on 29 December 2023 requesting $154.9 million revenue increase (16.6%), a 10.10% ROE, 50% equity layer and a $2.14 billion rate base. On 24 July 2024, NW Natural entered into an all-party settlement agreement that included a $95 million revenue increase (10.2%) and a 9.4% ROE and 50% equity layer, which remain unchanged. If approved by the OPUC, we view the settlement as credit supportive and consistent with prior rate case outcomes that have also been constructive. It also illustrates NW Natural's robust relationship with its regulatory authority. NW Natural's initial filing represented the largest base rate increase requested in recent years, underscoring the inflationary pressures the utility has been navigating. NW Natural expects new rates to take effect 1 November 2024.

From a legislative perspective, Oregon has frequently been on the forefront of progressive environmental measures, including the 2019 passage of Senate Bill 98 (SB 98), which allows utilities to acquire renewable natural gas (RNG) on behalf of customers. In July 2020, the parameters surrounding the rulemaking for RNG cost recovery were determined, which allowed for NW Natural to sign its first RNG investment in December 2020. We see this as an important step in supporting ongoing investment and growth for NW Natural in the face of the threat of electrification. The state support for RNG development can be a helpful tool for the company to maintain its place as a significant energy provider for customers, at the same time as state reduces carbon and methane emissions.

We also view the company as having low stranded asset risk given the state's policy goals of advancing renewable natural gas as a form of decarbonization and OPUC ongoing support of cost recovery for these projects. In the 2021 general rate case, the OPUC approved the recovery of costs associated with the Lexington RNG facility under Senate Bill 98 and authorized the adoption of an automatic adjustment clause that allows the utility to add costs associated with its renewable natural gas projects to rates annually on 1 November.

Washington

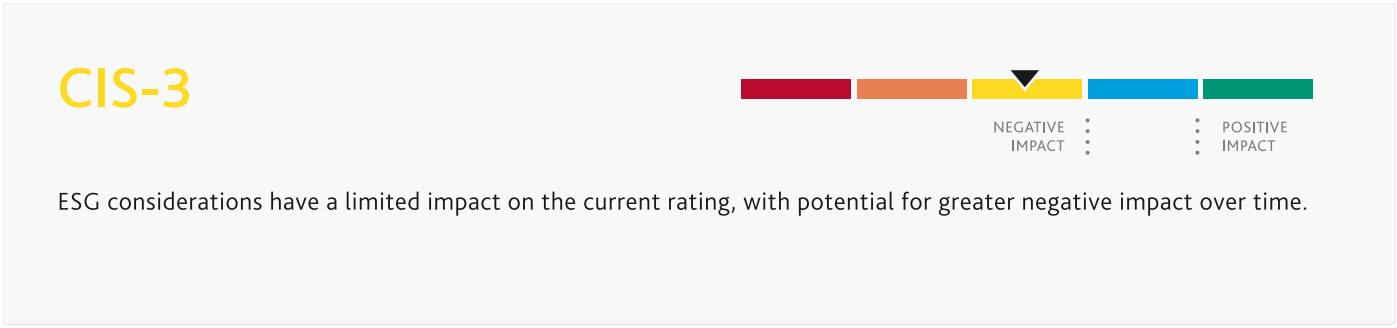
In October 2021, the WUTC issued an order authorizing an annual revenue requirement increase over two years; a 6.4% or $5 million increase in the first year, effective 1 November 2021, and up to a 3.5% or $3 million increase in the second year beginning 1 November

2022. The order was based on an average rate base of $247.3 million. The filing was based on system investments including costs associated with resiliency and reliability, consumer focused technology and building improvements and upgrades. The new WUTC order does not specify the underlying inputs of the cost of capital such as capital structure and ROE. This multiyear rate case is purposed to recover investments and costs for system resiliency and reliability as well as headquarter leasehold improvements and rent costs. It also provides for recovery of upgrades to the Vancouver, Washington service center.

ESG considerations

Northwest Natural Gas Company's ESG credit impact score is CIS-3

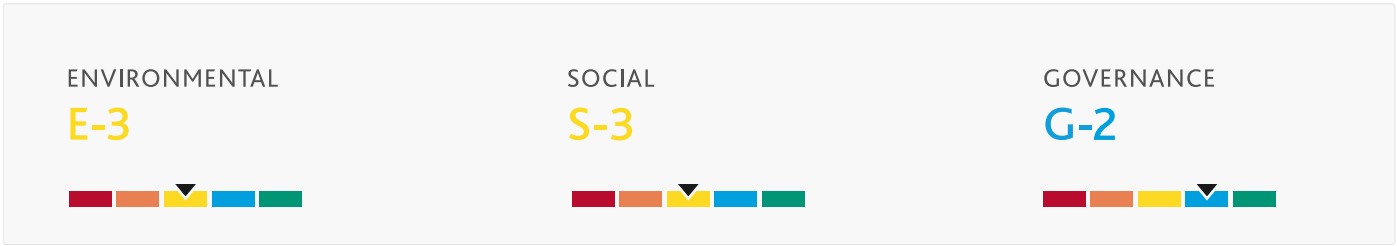
Exhibit 5
ESG credit impact score



Source: Moody's Ratings

NW Natural's **CIS-3** indicates that its ESG attributes are overall considered as having a limited impact on the current rating, with greater potential for future negative impact over time. The utility's scores reflect a combination of higher risk exposure to carbon transition, physical climate and demographic and societal trends.

Exhibit 6
ESG issuer profile scores



Source: Moody's Ratings

Environmental

NW Natural's **E-3** issuer profile score is driven by its moderately negative carbon transition and physical climate risks. Favorably, the company has a strong track record of meeting established emissions targets set by legislative (Oregon Senate Bill 98) and regulatory policies. NW Natural established a Low Carbon Savings goal of 30% by 2035 that includes customers emissions and a goal of being a carbon neutral provider by 2050. This will be achieved through increasing the use of renewable natural gas as well as hydrogen blending. Although the utility is exposed to moderately high physical climate risks, the company worked to mitigate these risks by removing all bare steel pipe from its system by completing the multi-year investment in 2015. Additionally, the system is predominantly underground, which makes the infrastructure more resilient and less vulnerable to weather or other events that could disrupt power to the region.

Social

NW Natural's **S-3** issuer profile score reflects higher risk to responsible production and demographics and societal trends that increase public concern over environmental, social, or affordability issues that could lead to adverse regulatory political intervention. These

risks are balanced by neutral to low exposure to health and safety, human capital, and customer relations. NW Natural has historically worked collaboratively with its regulator to make energy transition as affordable as possible for customers and we see this trend continuing as the company executes on its energy transmission goals over the next several years. Additionally, the company has a strong hedging program including storage and contracts that draw from a diverse supply to ensure reliability and reduce commodity risk

Governance

NW Natural's **G-2** issuer profile score is broadly in line with other utilities and does not pose a particular risk. This is supported by neutral to low exposure to financial strategy and risk management and management credibility and track record.

ESG Issuer Profile Scores and Credit Impact Scores for the rated entity/transaction are available on Moodys.com. In order to view the latest scores, please click here to go to the landing page for the entity/transaction on MDC and view the ESG Scores section.

Liquidity analysis

NW Natural maintains adequate liquidity through the use of external credit facilities and market issuances to fund negative free cash flow. As of the last twelve months ending 31 March 2024, NW Natural's internal liquidity included about $62 million of cash on hand and produced about $225 million in cash flow from operations; this compares to about $299 million in capital expenditures and $94 million in dividends for the same last twelve month period.

The utility has access to a $400 million revolving credit agreement that expires on 3 November 2026. The credit agreement includes a feature that allows NW Natural to request an increase to the total amount up to $600 million as well as request to extend the agreement for two additional one-year periods, subject to lender approval. Additionally, the credit agreement also permits the issuance of letters of credit in an aggregate amount of up to $60 million. As of 31 March 2024, NW Natural did not have any outstanding balance drawn under its credit facility or letters of credit. The primary restrictive covenant requires the company to maintain a debt to capitalization ratio of 70% or less, which NW Natural was in compliance with at 31 March 2024 (52.1%).

NW Natural's next debt maturities are due in September 2025 and December 2025, when $20 million and $10 million of senior secured notes are due, respectively.

Credit Highlights

Overview

Key strengths	Key risks
Primarily low-risk natural gas distribution operations with limited unregulated storage operations.	Limited geographic and regulatory diversity.
Effective management of regulatory risks with operations under the credit-supportive regulatory frameworks in Washington and Oregon.	Decarbonization initiatives add pressure to earnings and limit future growth.
Residential-focused customer base, which provides some cash flow stability.	Continued negative discretionary cash flow over the next few years, indicating external funding needs.

We continue to monitor the Oregon rate application. Northwest Natural Gas. Co. (NWNG) requested a revenue increase of about $154.9 million, along with a return on equity (ROE) of 10.1%, to which intervener proposed a rate change of about $74.2 million, along with an ROE of

9.2%, much lower than the initial request. The rate application, which includes the recovery of expenses such as operation and maintenance, taxes, and depreciation, could potentially result in an average customer bill increase of about 18%. Under our base case, we expect an outcome that is consistent with the historical rate applications in Oregon.

We consider NWNG to be insulated from its parent, Northwest Natural Holding Co. (NWNH). Based on the strength of the insulating measures, NWNG could potentially be rated up to two notches higher than NWNH's group credit profile (GCP). Currently, NWNG is rated only one notch higher than its GCP, limited by its 'a+' stand-alone credit profile.

Outlook

The stable rating outlook on NWNG reflects our base case assumption that the company will generate sufficient cash flows to maintain appropriate consolidated financial measures for the current rating, including funds from operations (FFO) to debt of 15%-18% through 2026. The stable outlook also reflects our expectation of strong operating performance and effective management of regulatory risk.

Downside scenario

We could lower our rating on NWNG over the next 24 months if the company's consolidated financial performance weakened such that FFO to debt remained consistently below 15%. We could also lower our rating if the company's business risk increased. This could reflect higher risks due to decarbonization mandates and potential gas bans, a weakening of the company's management of regulatory risk, or an inability to consistently earn its authorized ROE.

Upside scenario

We could raise our rating on NWNG over the next 12-24 months if the company's financial performance improved such that FFO to debt were consistently above 21%, with no weakening of business risk.

Our Base-Case Scenario

Assumptions

- Modest customer growth and continued use of regulatory mechanisms.
- Continued negative discretionary cash flow through 2026.
- Annual capital spending averaging about $330 million through 2026.
- Annual dividends averaging about $80 million.
- All debt maturities refinanced.

Business Risk

We assess NWNG’s business risk based on its low-risk regulated gas distribution operations accounting for about 98% of consolidated operating revenue, residential-focused customer base, and effective management of regulatory risks. NWNG provides natural gas service to approximately 799,000 customers, with 65% of its margin generated from residential customers, 24% from commercial customers, and 6% from industrial customers. Residential and commercial customers accounted for slightly more than 60% of natural gas distribution volumes delivered. Almost 60% of the gas supply was from Canada while most of the rest was from the U.S. Rocky Mountain region. The company benefits from stable and supportive regulatory environments in both jurisdictions in which it operates, with purchased gas adjustments and environmental cost recovery, decoupling, and a forward-looking test year in Oregon and multiyear rate case fillings in Washington. We view these mechanisms as supportive of its financial measures, allowing the company to mitigate regulatory lag. In addition, NWNG has continued its strategy to diversify its business operations by purchasing small, regulated water utilities. Given the low-risk nature of water utilities, we view NWNG's entry into the

regulated water utility space as a modest positive for its business risk profile. These factors support our view of the company's business risk profile at the stronger end of the excellent category.

Financial Risk

Under our base case scenario, we assess NWNG using our low-volatility table, reflecting the low-risk nature of its natural gas distribution operations and effective management of regulatory risk. We incorporate our assumptions, including the continued use of regulatory mechanisms and rate riders to effectively manage regulatory risk, annual capital spending averaging about $320 million, and annual dividends averaging about $80 million through 2026. NWNG plans to invest about 65% of capital spending in replacing and enhancing systems and technologies. We expect FFO to debt in the middle of the intermediate financial risk profile range, with FFO to debt about 15%-18% throughout 2026.

Our base case forecast includes the continued use of regulatory mechanisms and rate riders to effectively manage regulatory risk, annual capital spending averaging about $330 million, and annual dividends averaging about $75 million. We expect NWNG's stand-alone financial measures to remain in the middle range of its financial risk profile category such that FFO to debt is 15%-18% through 2026.

Liquidity

As of March 31, 2024, we assess NWNG's liquidity as adequate, with sources covering uses by 1.1x over the coming 12 months and covering uses even if forecast consolidated EBITDA declines by 10%. We believe the predictable regulatory framework for NWNG provides a manageable level of cash flow stability for the company even in times of economic stress, supporting our use of slightly lower thresholds to assess liquidity. In addition, NWNG has the ability to absorb high-impact, low-probability events, reflecting that the company maintains about $400 million in committed credit facilities through 2026. It also reflects our belief that the company can lower its high capital spending (averaging about $320 million annually through 2026) during stressful periods, indicative of a limited need for refinancing under such conditions. Furthermore, our assessment reflects the company's generally prudent risk management and sound

relationships with its banking group (which includes over four well-established banks). Overall, we believe that the company should be able to withstand adverse market circumstances over the next 12 months, with sufficient liquidity to meet its obligations. The company has no big long-term debt maturity coming due, and we expect it to proactively address this maturity well in advance of its scheduled due date.

Principal liquidity sources

- Cash and cash equivalents of about $61.9 million as of March 31, 2024;
- Credit facility of about $400 million; and
- Cash FFO estimated of about $245 million.

Principal liquidity uses

- Debt maturities of about $31.7 million,
- Capital expenditure of about $335 million,
- Working capital outflow of about $40 million, and
- Dividend payments of about $75 million.

Environmental, Social, And Governance

ESG factors have no material influence on our credit rating analysis of NWNG.

Group Influence

Under our group rating methodology, we consider NWNH as the parent of the group with a GCP of 'a-'. We assess NWNG as a core subsidiary of NWNH because we view the utility as integral to the group's identity, highly unlikely to be sold, and having a strong commitment from NWNH's senior management, given the company's emphasis on maintaining its strategic focus on regulated gas distribution operations.

Because NWNG is operationally separate from NWNH and there are certain regulatory restrictions in place, we view the utility as having sufficient insulating measures that allow NWNG to be rated potentially up to two notches above the NWNH group. These regulatory protections include dividend restrictions, a highly independent board, and an independent third party that is the holder of the "golden share" whose vote is required to file for bankruptcy. That said, our issuer credit rating on NWNG is limited to just one notch above the parent since NWNG's stand-alone credit profile reflects one-notch above the parent's GCP.

Issue Ratings--Subordination Risk Analysis

Capital structure

The short-term rating on NWNG is 'A-1' based on our 'A+' issuer credit rating on the company.

Analytical conclusions

We rate the company's medium-term notes program 'A+', equal to the issuer credit rating, because we view any debt issued under this program as debt issued by a qualifying investment-grade utility.

Issue Ratings--Recovery Analysis

Key analytical factors

NWNG's first-mortgage bonds benefit from a first-priority lien on substantially all of the utility's real property, owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating one notch above the issuer credit rating.

I. INTRODUCTION AND SUMMARY

Q. Please state your name, affiliation, and business address.

A. My name is Jennifer E. Nelson. I am a Vice President at Concentric Energy Advisors ("Concentric"). Concentric is a management consulting and economic advisory firm that specializes in the North American energy and water industries. Based in Marlborough, Massachusetts, Washington, D.C., and Calgary, Alberta, Concentric specializes in regulatory and litigation support, financial advisory services, energy market strategies, market assessments, energy commodity contracting and procurement, economic feasibility studies, and capital market analyses. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752.

Q. Please describe your professional background and education.

A. I have more than fifteen years of experience in the energy industry, having served as a consultant and energy/regulatory economist for state government agencies. Since 2013, I have provided consulting services to utility and regulated energy clients on a range of financial and regulatory issues including cost of capital, ratemaking policy, and regulatory strategy issues. Prior to consulting, I was a staff economist at the Massachusetts Department of Public Utilities, and a petroleum economist for the State of Alaska. I completed utility regulatory training offered by New Mexico State University's Center for Public Utilities and earned the Certified Rate of Return Analyst designation from the Society of Utility and Regulatory Financial Analysts based on my experience and successful completion of an examination. A summary of my professional and educational background, including a list of my testimony filed before regulatory commissions, is included as Exh.JEN-2.

Q. On whose behalf are you appearing in this proceeding?

A. I am appearing on behalf of Northwest Natural Gas Company ("NW Natural" or "the Company").

Q. Have you previously testified before the Washington Utilities and Transportation Commission (the "Commission")?

A. This is my first time submitting testimony before the Commission, however, I have filed testimony before 22 state regulatory commissions as detailed in Exh. JEN-2. During my time as a consultant, I have supported the development of expert witness testimony and analyses regarding the cost of capital (i.e., Return on Equity ("ROE") and capital structure) in more than 100 proceedings filed before numerous U.S. state regulatory commissions and the Federal Energy Regulatory Commission.

II. PURPOSE AND OVERVIEW OF DIRECT TESTIMONY

Q. What is the purpose of your testimony?

A. The purpose of my Direct Testimony is to present evidence and provide a recommendation regarding an appropriate return on equity (ROE)[1] for the Company's regulated natural gas utility operations and to assess the reasonableness of the Company's proposed capital structure for ratemaking purposes. My analyses and conclusions are supported by the data presented in JEN-3 to JEN-12, which have been prepared by me or under my direction.

[1] Throughout my testimony, I use the terms "ROE" and "cost of equity" interchangeably.

Q. Please summarize your conclusions regarding the appropriate cost of equity and capital structure in this proceeding.

A. To develop my ROE recommendation, I rely on the results of three widely used market-based financial models applied to two proxy groups of companies comparable in risk to NW Natural: (1) the constant growth and quarterly growth forms of the Discounted Cash Flow ("DCF") model, (2) the traditional and empirical forms of the Capital Asset Pricing Model ("CAPM"), and (3) the Bond Yield Plus Risk Premium analysis. As shown in Figure 1, these models indicate a cost of equity in the range of 10.00 percent to 11.00 percent. Within this range, I conclude that 10.20 percent is a reasonable and conservative estimate of NW Natural's cost of equity.

Figure 1: Summary of Results[2]

	Including SWX in DCF		*Excluding SWX from DCF*	
Model	**Gas Proxy Group**	**Combined Proxy Group**	**Gas Proxy Group**	**Combined Proxy Group**
Constant Growth DCF	10.69%	10.17%	10.34%	10.06%
Quarterly Growth DCF	10.95%	10.33%	10.59%	10.23%
Average DCF	*10.82%*	*10.25%*	*10.47%*	*10.15%*
Blended CAPM	11.17%	11.12%	11.17%	11.12%

Average CAPM	*10.96%*	*10.91%*	*10.96%*	*10.91%*
Average Risk Premium	*10.24%*	*10.28%*	*10.24%*	*10.28%*
3-Model Average	*10.67%*	*10.48%*	*10.56%*	*10.45%*
ROE Range	**10.00% - 11.00%**			
Recommendation	**10.20%**			

[2] Exhs. JEN-4 to JEN-8. DCF and CAPM model results are the average of the mean and median proxy group results. Data as of June 30, 2025.

As part of its Multi-year Rate Plan, NW Natural is proposing to phase in its rate request, including the requested return. In this proceeding, the Company is requesting an ROE of 10.10 percent in Rate Year 1, and 10.20 percent in Rate Years 2 and 3, which are at the low end of the range of analytical results shown in Figure 1 and below the average of the three models (approximately 10.50 percent).

As to the Company's capital structure, the requested capital structure consisting of 51.00 percent common equity, 48.00 percent long-term debt and 1.00 percent short-term debt reflects its projected capital structure over the rate years and is somewhat more leveraged (i.e., contains more debt) than its gas utility peers on average. Accordingly, the Company's requested capital structure is reasonable and should be approved.

Q. How do you determine your recommendation from the results summarized above?

A. The cost of equity is an opportunity cost that cannot be precisely quantified. Therefore, it must be estimated using various financial models. Each of the ROE estimation models is subject to limiting assumptions and each provides a different perspective on investors' return requirements under varying market conditions. The use of multiple financial models, therefore, enables a robust and comprehensive assessment of the cost of equity instead of relying on one specific estimation model.

In addition to the analytical results summarized above, my recommendation considers the Company's (1) regulatory risk and the need to access capital to fund its capital expenditure program; (2) the risks associated with decarbonization policies; and (3) NW Natural's significantly smaller size relative to a group of proxy companies

to assist with determining the appropriate ROE. In a recent credit report for NW Natural, S&P Global Ratings ("S&P") noted a potential increase in the Company's business risk associated with ongoing decarbonization policy risks in Oregon and Washington.[3] Similarly, Moody's noted "[e]levated social risk due to higher scrutiny on natural gas as an energy source"[4] as a credit challenge for NW Natural. Moody's reiterated that view in its most recent credit opinion for the Company issued in July 2025.[5]

Lastly, my recommendation reflects the current capital market and macroeconomic environment in which utilities such as NW Natural operate. Although these factors are relevant to investors, their effect on the Company's cost of equity cannot be directly quantified and I have not made an explicit adjustment to my ROE recommendation to reflect these factors. As shown in Figure 1 above, an ROE of 10.20 percent is at the low end of the range of analytical results, and below the 3-model averages for the two proxy groups.

Q. Does your recommendation consider changes in economic and financial market conditions since NW Natural's recent rate cases?

A. Yes, it does. The cost of equity is forward-looking; as such, the relevant point of emphasis in the cost of equity estimation process is on forward-looking data and expectations. As shown in Figure 2 and Figure 3 below, government and utility bond

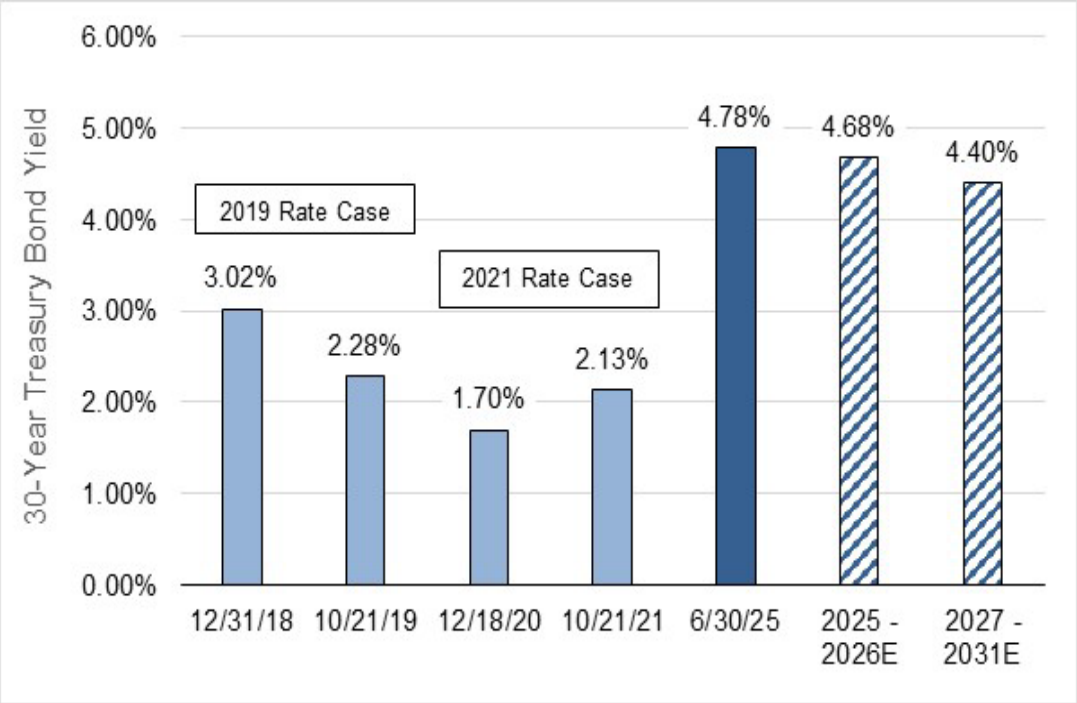
[3] S&P Global Ratings, "Northwest Natural Holding Co. Downgraded To 'A'; Outlook Negative; Subsidiary Ratings Affirmed, Outlook To Stable," at 2 (April 19, 2024).

[4] Moody's Investors Service, "Credit Opinion, Northwest Natural Gas Company, Update to credit analysis," at 1 (July 30, 2024).

[5] Moody's Investors Service, "Credit Opinion: Northwest Natural Gas Company," at 2 (July 8, 2025).

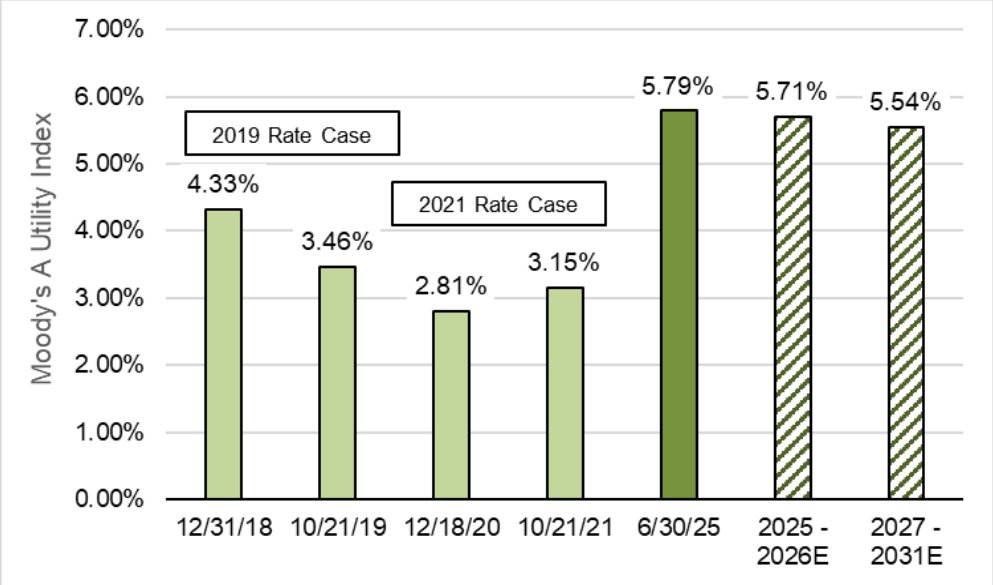
yields have increased significantly since the Company's last two rate cases and are expected to remain at elevated levels over the next five years. My CAPM and Risk Premium analyses incorporate both current and projected bond yields that reflect the existing view of the market.

Figure 2: 30-Year Treasury Yield (2019-2031)[6]



[6] Spot yields as of date referenced. Source: Federal Reserve Bank of St. Louis FRED Economic Data; Blue Chip Financial Forecasts Vol. 44, No. 7, at 2 (July 1, 2025), Blue Chip Financial Forecasts Vol. 44, No. 6, at 14 (June 2, 2025). I note that as of July 31, 2025, the spot yield on the 30-year Treasury bond was 4.89 percent.

Figure 3: Moody's 'A' Utility Index (2019-2031)[7]



Prevailing long-term bond yields have a significant effect on utilities' cost of capital, as well as investors' return requirements. Rising treasury yields signal to investors that they can earn a higher return investing in risk-free government bonds. Investors expect higher returns when investing in assets riskier than government-issued bonds (such as utility stocks); therefore, the cost of equity for utilities has increased along with the rise in interest rates, though not on a one-to-one basis.

As explained in Section III, a utility's capital costs are part of the cost of service and reflect the cost that the utility must pay its debt and equity investors to compensate them for the use of their financial capital. An ROE that does not sufficiently allow NW Natural to recover its higher capital costs ultimately reduces the Company's

[7] Spot yields as of date referenced. Source: Federal Reserve Bank of St. Louis FRED Economic Data; Bloomberg Professional, Blue Chip Financial Forecasts Vol. 44, No. 7, at 2 (July 1, 2025), Blue Chip Financial Forecasts Vol. 44, No. 6, at 14 (June 2, 2025). I note that as of July 31, 2025, the spot yield Moody's Utility A Index was 5.81 percent. Projected Utility Bond Yields assume long-term average spread between the Moody's 'A' Utility Bond Index and Moody's 'Aaa' Corporate Bond Index between 2015-2025.

attractiveness to investors and further increases the cost of debt and equity. Consequently, it is important that the Commission's decision in this case reflect the increase in capital costs that NW Natural faces.

Q. What is your conclusion regarding the Company's proposed capital structure?

A. I support NW Natural's requested capital structure of 51.00 percent common equity 48.00 percent long-term debt, and 1.00 percent short-term debt as reasonable relative to the range of capital structures for the operating companies held by the proxy group companies. My analyses regarding the Company's capital structure is further explained in Section VII.

Q. How is the remainder of your Direct Testimony organized?

A. The balance of my Direct Testimony is organized as follows:

- Section III – Summarizes the regulatory guidelines and principles relevant to the cost of capital estimation in regulatory proceedings;
- Section IV – Explains the development of the proxy groups used to develop my analytical results;

  Section V – Describes the analyses on which my ROE determination is based;

  Section VI – Discusses the Company's business risks relative to the proxy group that affect its cost of equity;
- Section VII – Provides an assessment of the Company's proposed capital structure;
- Section VIII – Reviews the current capital market conditions and the effect on the cost of equity;
- Section IX – Summarizes my conclusions and recommendations; and

- Section X – Provides a list of my Exhibits.

III. REGULATORY GUIDELINES AND PRINCIPLES

Q. Before addressing the specific aspects of this proceeding, please explain the connection between the cost of capital and a utility's cost of service.

A. Under the cost-of-service ratemaking paradigm, the development of utility rates begins with determining the utility's total cost to serve customers. This is known as the revenue requirement, since the utility's revenues must be sufficient to recover its costs to serve customers. The revenue requirement consists of four components: (1) operating and maintenance ("O&M") expenses, (2) taxes, (3) the return *of* capital through depreciation expense, and (4) the return *on* capital through the regulated return on rate base. The return on rate base is calculated as the weighted average cost of capital multiplied by the rate base. The return on capital must be sufficient to allow the utility to repay its debt obligations and compensate equity investors for the use of their financial capital. From that important perspective, the return on capital reflects a cost to the utility just like any other component of the revenue requirement.

Q. Please explain the cost of capital conceptually.

A. The cost of capital (i.e., the costs of both debt and equity) is the return that investors require to commit capital to a firm. Investors will provide funds to a firm only if the return they *expect* is equal to, or greater than, the return they *require* to accept the risk of investing capital in the firm. Simply, the cost of capital is the expected rate of return prevailing in the capital markets on alternative investments of similar risk.[8]

[8] Lawrence A. Kolbe, James A. Read, Jr., and George R. Hall, The Cost of Capital – Estimating the Rate of Return for Public Utilities, The MIT Press, Cambridge, MA (1985).

Conceptually, the cost of capital is: (1) forward looking and reflects an *expected* rate of return; (2) an opportunity cost; (3) determined in the capital markets, and (4) dependent on, and proportional to, the risk of the investment.[9]

Because the cost of equity is expectational and premised on the principle of opportunity costs, it is not directly observable. Instead, it must be estimated using market data applied to various financial models that reflect simplified representations of investor behavior and expectations. Further, equity investors have a claim on cash flows only *after* debt holders are paid; the uncertainty (or risk) associated with those residual cash flows determines the cost of equity. Because equity investors bear the residual risk, they take greater risks and require higher returns than debt holders. Ultimately, the estimated cost of equity should reflect the return that investors require considering the subject company's risk profile and the returns available on comparable investments.

Q. How is the cost of equity estimated in regulatory proceedings?

A. Regulated utilities primarily use long-term capital (i.e., common stock, preferred stock, and long-term debt) to finance their permanent rate base. The allowed rate of return for a regulated utility is calculated as its weighted average cost of capital, in which the costs of the individual sources of capital are weighted by their respective book values. The ROE reflects the cost of raising and retaining equity capital and is estimated by using one or more market-based analytical approaches. However, as noted earlier, although quantitative models are used to estimate the ROE, it cannot be precisely

[9] *Ibid*.

quantified through a strict mathematical exercise.[10] As such, a reasonable and appropriate ROE reflects the financial, economic, and regulatory environment in which the estimate is developed, as well as the subject company's relative risk profile.

Q. Please describe the guiding principles used in establishing the cost of capital for a regulated utility.

A. Public utility regulation is rooted in the principle that utilities receive a fair rate of return sufficient to attract the capital required to provide public utility service for customers at reasonable rates. The U.S. Supreme Court ("Supreme Court") established the guiding principles for establishing a fair rate of return for a public utility in two seminal cases: (1) *Bluefield Water Works and Improvement Co. v. Public Service Comm'n*. ("*Bluefield*");[11] and (2) *Federal Power Comm'n v. Hope Natural Gas Co.* ("*Hope*").[12] In *Bluefield*, the Supreme Court stated:

> A public utility is entitled to such rates as will permit it to earn a return upon the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit, and enable it to raise the money necessary for the proper discharge of its public duties.[13]

[10] This is consistent with the *Hope* and *Bluefield* principle that the analytical result, as opposed to the method employed, controls the determination of just and reasonable rates.

[11] See, Bluefield Water Works and Improvement Co. v. Public Service Comm'n. 262 U.S. 679, 692 (1923).

[12] See, Federal Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591, 603 (1944).

[13] Bluefield Water Works and Improvement Co. v. Public Service Comm'n. 262 U.S. 679, 692 (1923).

In *Hope*, the Supreme Court reiterated the three primary standards for a regulated rate of return:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock...By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[14]

In summary, the Supreme Court has recognized that the fair rate of return on equity should be: (1) comparable to returns investors expect to earn on other investments of similar risk (the "comparable return" standard); (2) sufficient to assure confidence in the company's financial integrity (the "financial integrity" standard); and (3) adequate to maintain and support the company's credit and to attract capital (the "capital attraction" standard). Importantly, a fair and reasonable return satisfies all three of these standards.

Q. Why is it important for a utility to be allowed the opportunity to earn a return that is adequate to attract capital at reasonable terms?

A. Regulated utilities have a legal obligation to serve regardless of prevailing economic and capital market conditions. Unlike non-regulated firms, a regulated utility cannot decide to whom it provides utility service in its footprint, how much service it delivers, nor when it provides service. Utility service requires substantial amounts of capital, and utilities must ensure they have access to external financial capital (debt and equity) on cost effective terms to finance its assets not only during times when markets are

[14] Federal Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591, 603 (1944).

well-behaving, but also when markets are volatile or constrained (e.g., during periods of high inflation and interest rates, global pandemics, changes in government, and economic recessions). A return that is adequate to attract capital at reasonable terms enables the utility to provide safe and reliable service to customers while maintaining its financial integrity. As discussed above, and in keeping with the *Hope* and *Bluefield* standards, that return must be commensurate with the returns expected for investments of equivalent risk.

The ratemaking process is based on the principle that, for investors and companies to commit the capital needed to provide safe and reliable utility services, the utility must have the opportunity to recover the return of, and the market-required return on, invested capital. The allowed ROE should enable the subject utility to maintain its financial integrity in a variety of economic and capital market conditions. A return that is adequate to attract capital at reasonable terms enables the utility to provide safe, reliable service to customers while maintaining its financial soundness.

Further, the financial community carefully monitors utility companies' current and expected financial conditions, as well as the regulatory environment in which those companies operate. In that respect, the regulatory environment is one of the most important factors considered in both debt and equity investors' assessments of risk.[15] That consideration is especially important during uncertain economic and financial conditions in which the utility may require access to capital markets.

[15] *See*, *e.g.*, Moody's Ratings, *Rating Methodology: Regulated Electric and Gas Utilities*, August 6, 2024, at 2.

The outcome of the Commission's order in this case, therefore, must provide NW Natural with the opportunity to earn a ROE that is: (1) adequate to attract capital at reasonable terms; (2) sufficient to ensure its financial integrity; and (3) commensurate with returns on investments in enterprises having corresponding risks. Providing NW Natural with a reasonable opportunity to earn its market-based cost of equity ensures that customers receive safe and reliable service at a reasonable cost in all market environments.

Q. What are your conclusions regarding the regulatory principles pertaining to the cost of capital for a public utility?

A. Congruent with other costs in a utility's cost of service, the regulated return on rate base is a cost that NW Natural incurs as part of its normal operations, including the need to compensate equity investors for the use of their capital. Under the *Hope* and *Bluefield* standards, the cost of equity authorized for NW Natural in this proceeding should be (1) adequate to attract capital at reasonable terms; (2) sufficient to ensure its financial integrity; and (3) commensurate with returns on investments in enterprises having corresponding risks.

Because utilities are capital intensive and investors have many investment alternatives, the Company's financial profile must be adequate on a relative basis to ensure its ability to attract capital under a variety of economic and financial market conditions. The Commission's decision regarding the authorized ROE and capital structure in this proceeding will directly affect the Company's ability to attract the capital needed to maintain and enhance service to customers.

IV. PROXY GROUP SELECTION

Q. Why is it necessary to select a proxy group to estimate the fair return on equity for NW Natural?

A. In this proceeding, we are focused on estimating the cost of equity for NW Natural's Washington-jurisdictional operations. Since the ROE is a market-based concept and NW Natural's Washington service territory is not a separate entity with its own stock price, it is necessary to select a group of companies that are both publicly traded and comparable to certain NW Natural business and financial characteristics to serve as a "proxy" for the ROE estimation process. Even if NW Natural's regulated gas utility operations in Washington made up the entirety of the publicly traded entity, it is possible that transitory events could bias the Company's market value in one way or another over a given period. A significant benefit of using a proxy group is the ability to mitigate the effects of company-specific events that may not be representative of the industry or long-term trends. As a result of the screening criteria used to select the proxy group, the companies included in the proxy groups and used in my ROE analyses have similar business and operating characteristics to NW Natural's regulated utility operations, and thus provide a reasonable basis for the derivation and assessment of ROE estimates.

Q. Please provide a brief overview of NW Natural's operations.

A. NW Natural distributes natural gas to approximately 806,000 residential commercial and industrial customers in Oregon and southwest Washington. The Company's Washington territory represents approximately 12 percent of its customer base, while

88 percent of its customer base is in Oregon.[16] NW Natural's long-term issuer rating is A+ from Standard & Poor's ("S&P"). The Company's senior unsecured shelf rating from Moody's Investor Services ("Moody's") is (P)Baa1.[17]

Q. What criteria do you use to select the proxy groups?

A. As explained below, I have developed two proxy groups: a Gas Proxy Group and a Combined Proxy Group. The Gas Proxy Group is utilized to develop my ROE recommendation. The Combined Proxy Group is utilized to inform, verify, and support my ROE recommendation. To develop the Gas Proxy Group, I first began with the nine companies that Value Line classifies as "Natural Gas Utilities" and then screened companies according to the following criteria to develop a proxy group reasonably comparable to NW Natural:

1. Pays quarterly cash dividends that have not been reduced or omitted in the last two years;
2. Maintains an investment grade long-term issuer rating (BBB- or higher from S&P or Baa3 or higher from Moody's) from both S&P and Moody's;
3. Is consistently covered by more than one equity analyst;
4. Has positive earnings growth rates published by at least two of the following sources: Value Line Investment Survey ("Value Line"), S&P, and Zacks Investment Research ("Zacks");

[16] Northwest Natural Holding Company, 2024 SEC Form 10-K, at 8. Accessible at NW Natural Holding's website: https://d18rn0p25nwr6d.cloudfront.net/CIK-0000073020/226d33d4-f658-4229-bd74-ca083bb85049.pdf.

[17] NW Natural's rating from Moody's is a provisional rating.

5. Natural gas distribution net operating income makes up a majority of the consolidated company's net operating income, on average, for the three years ended 2024;
6. Has not had a recent significant merger activity or transaction or have had a recent significant financial event that could affect its market data or financial condition.

Q. Do you include Northwest Natural Holding Company in your proxy groups?

A. No. It is my general practice to exclude the subject company, or its publicly traded parent company, from the proxy group due to the circular logic that would occur by including those results.

Q. What is the composition of your Gas Proxy Group?

A. Based on the screening criteria discussed above, and removing Northwest Natural Gas Holding Company, I arrived at a proxy group consisting of six publicly traded natural gas utilities shown in Figure 4.

Figure 4: Gas Proxy Group

Company	Ticker
Atmos Energy Corporation	ATO
New Jersey Resources Corporation	NJR
NiSource, Inc.	NI
ONE Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX
Spire Inc.	SR

Q. Does the Gas Proxy Group of six companies provide a reasonable basis to estimate NW Natural's ROE?

A. Yes. In selecting a proxy group, my objective is to balance the competing interests of selecting companies that are representative of the risks and prospects faced by NW Natural, while at the same time ensuring that there is a sufficient number of companies in the proxy group. The analyses performed in estimating the ROE are more likely to be representative of the subject utility's cost of equity to the extent that the selected proxy companies are fundamentally comparable to the subject utility. A larger proxy group does not necessarily improve the representative nature of the proxy group. Including companies whose fundamental comparability may be questionable simply for the purpose of expanding the number of observations does not improve the reliability of the results or the conclusions drawn from them. On balance, the Gas Proxy Group is reasonably comparable to NW Natural and is an appropriate set of companies to use in the ROE estimation process.

Q. Please describe your Combined Proxy Group alternative and the specific screening criteria you utilized to develop that group.

A. Due to consolidation in the natural gas industry over the last decade, the universe of publicly traded natural gas utilities covered by Value Line has been reduced to nine companies. The Gas Proxy Group screening criteria described above narrowed that group to six companies. Although it is my opinion that a proxy group of six natural gas companies is sufficient in size for the purpose of estimating NW Natural's cost of equity, I recognize that it may be appropriate to develop a larger proxy group to evaluate the reasonableness of Gas Proxy Group's ROE model results. A Combined

Proxy Group may be necessary in the future if there is further consolidation in the gas industry reducing the number of companies in the Natural Gas Utilities universe. Therefore, I developed a Combined Proxy Group consisting of the six natural gas utilities contained in the Gas Proxy Group, supplemented with electric utilities that have a meaningful amount of natural gas operations.

To screen the universe of 36 electric utilities covered by Value Line for inclusion in the Combined Proxy Group, I relied on the following criteria:

1. Pays quarterly cash dividends that have not been reduced or omitted in the last two years;
2. Maintains an investment grade long-term issuer rating (BBB- or higher from S&P or Baa3 or higher from Moody's) from both S&P and Moody's;
3. Is consistently covered by more than one equity analyst;
4. Has positive earnings growth rates published by at least two of the following sources: Value Line, S&P, and Zacks;
5. Regulated net operating income makes up a majority of the consolidated company's net operating income, on average, for the three years ended 2024;
6. Natural gas distribution net operating income makes up more than 15 percent of the consolidated company's net operating income, on average, for the three years ended 2024; and
7. Has not had a recent significant merger activity or transaction or have had a recent significant financial event that could affect its market data or financial condition.

Based on this screening criteria, 13 electric utilities were added to the six gas proxy companies to produce a Combined Proxy Group consisting of the following 19 companies:

Figure 5: Combined Proxy Group

Company	Ticker
Atmos Energy Corporation	ATO
New Jersey Resources Corporation	NJR
NiSource, Inc.	NI
ONE Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX
Spire Inc.	SR
Ameren Corporation	AEE
Avista Corporation	AVA
Black Hills Corporation	BKH
CenterPoint Energy, Inc.	CNP
CMS Energy Corporation	CMS
Consolidated Edison, Inc.	ED
DTE Energy Company	DTE
Eversource Energy	ES
Public Service Enterprise Group Inc.	PEG
Sempra Energy	SRE
Southern Company	SO
Wisconsin Energy Corporation	WEC
Xcel Energy Inc.	XEL

Q. Do your screening criteria result in groups of companies that investors would view as comparable to NW Natural?

A. Yes. The proxy groups have been selected to develop two groups of companies that are reasonably comparable (but not identical) to the financial and operational characteristics of NW Natural in aggregate. The screening criterion requiring an investment grade credit rating ensures that the proxy companies, like NW Natural, are generally in sound financial condition. Additionally, the criterion based on the percentage of net operating income from regulated natural gas distribution operations differentiates between utilities that derive a meaningful proportion of income from regulated natural gas distribution operations from those with substantial unregulated risks. These screens collectively reflect the risk factors that investors consider in making their investment decisions in natural gas utility companies.

V. COST OF EQUITY ESTIMATION

Q. What analytical approaches do you rely on to determine the Company's ROE?

A. As discussed earlier, I rely on the constant growth and quarterly growth forms of the DCF model, the traditional and empirical forms of the CAPM, and the Bond Yield Plus Risk Premium approach. The models I apply are commonly used in practice, as well as in regulatory proceedings.[18] Additionally, each model provides a different perspective of investors' views of risk and return. Therefore, using multiple methods provides a more comprehensive, and therefore more reliable, perspective on investors' return requirements.

[18] *See, for example,* Eugene Brigham, Louis Gapenski, Financial Management: Theory and Practice, 7th Ed., 1994, at 341.

A. Constant Growth Discounted Cash Flow Model

Q. Please describe the Constant Growth DCF approach.

A. The Constant Growth DCF model is based on the theory that a stock's current price represents the present value of all expected future cash flows. In its simplest form, the Constant Growth DCF model expresses the cost of equity shown in Equation [1] below sets the ROE equal to the expected dividend yield plus the expected long-term annual growth rate in perpetuity:

$$k = \frac{D_0\ (1+g)}{\mathrm{P}} + g \qquad [1]$$

where:

k = the required ROE,

D_0 = the current annualized dividend,

P = the current stock price, and

g = the expected long-term annual growth rate.

Q. What assumptions underlie the Constant Growth DCF model?

A. The Constant Growth DCF model assumes: (1) a constant average annual growth rate for earnings and dividends; (2) a stable dividend payout ratio; (3) a constant Price/Earnings multiple; and (4) a discount rate greater than the expected growth rate. The model also assumes that the current cost of equity remains constant in perpetuity.

Q. What market data do you use as inputs of your Constant Growth DCF analysis?

A. I calculate the Constant Growth DCF result for each of the proxy companies using the following inputs:

- The average daily closing prices for the 30-, 90-, and 180-trading days ended June 30, 2025, for the term P_0;
- The current quarterly dividend as of June 30, 2025 multiplied by 4, for the term D_0; and
- Long-term earnings per share ("EPS") growth rate projections as of June 30, 2025 reported by Zacks, S&P Capital IQ Pro, and *Value Line*.

Q. Why do you use three averaging periods to calculate an average stock price?

A. I do so to ensure that the model's results are not skewed by anomalous events that may affect stock prices on any given trading day. At the same time, the averaging period should be reasonably reflective of expected capital market conditions over the long term. Using 30-, 90-, and 180-trading day averaging periods balances those concerns.

Q. How do you calculate the expected dividend yield over the coming year?

A. Because utility companies tend to increase their quarterly dividends at different times throughout the year, it is reasonable to assume that dividend increases will be evenly distributed over calendar quarters. Given that assumption, it is appropriate to calculate the expected dividend yield by applying one-half of the long-term growth rate to the current dividend yield. That adjustment ensures that the expected dividend yield is, on average, representative of the coming 12-month period.

Q. Why are analysts' projected earnings growth rates the appropriate measure of long-term growth in the Constant Growth DCF model?

A. In its Constant Growth form, the DCF model (i.e., as presented in Equation [1] above) assumes a single expected growth estimate in perpetuity, which assumes a fixed payout

ratio, and the same constant growth rate in EPS, dividends per share, and book value per share. In the long run, dividend growth can only be sustained by earnings growth.

Further, academic studies have clearly and consistently shown that measures of earnings and cash flow are strongly related to returns, and that analysts' forecasts of growth are superior to other measures of growth in predicting stock prices.[19] For example, the research of Vander Weide and Carleton demonstrates that earnings growth projections have a statistically significant relationship to stock valuation levels, while dividend growth rates do not.[20] Those findings suggest that investors form their investment decisions based on expectations of growth in earnings, not dividends. Lastly, the only forward-looking growth rates that are available on a consensus basis are analysts' EPS growth rates. The fact that earnings growth projections are the only widely available estimates of growth further supports the conclusion that earnings growth is the most meaningful measure of growth among the investment community. For these reasons, earnings growth is the appropriate measure of long-term growth in the DCF model.

[19] *See, e.g.*, Andreas C. Christofi, Petros C. Christofi, Marcus Lori and Donald M. Moliver, *Evaluating Common Stocks Using Value Line's Projected Cash Flows and Implied Growth Rate*, Journal of Investing (Spring 1999); Harris and Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management at 21 (Summer 1992); and Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management (Spring 1988); Robert S. Harris, *Using Analysts' Growth Forecasts to Estimate Shareholder Required Rate of Return*, Financial Management (Spring 1986).

[20] *See* Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management (Spring 1988).

Q. What are the results of your Constant Growth DCF analysis?

A. To provide a spectrum of DCF-based ROE estimates, I calculate the low, mean, and high Constant Growth DCF result. The mean result combines the average of the three EPS growth rate estimates with each proxy company's expected dividend yield. The high DCF result adds the maximum EPS growth rate estimate with each proxy company's expected dividend yield. Similarly, the low DCF result adds the minimum EPS growth rate estimate for each proxy company to the expected dividend yield. I then calculate the mean and median low, mean, and high DCF results for the proxy group. In developing my ROE recommendation, I rely on the average of the mean and median proxy group Constant Growth DCF results (see Figure 6, below, and Exh. JEN-4). By relying on the average of the mean and median proxy group results, I consider the individual DCF results of each proxy company while mitigating the effect of the highest and lowest estimates.

I note that the Constant Growth DCF results for Southwest Gas Holdings ("Southwest Gas" or "SWX") currently exceed the Gas Proxy Group average and median results by approximately 300 basis points. Therefore, to be conservative, I give more weight to the results excluding Southwest Gas's DCF results. Figure 6 summarizes the results of the Constant Growth DCF analysis using the average of the three earnings growth rate projections.

Figure 6: Constant Growth DCF Results[21]

	Mean ROE (Including SWX)	Mean ROE (Excluding SWX)
Gas Proxy Group		
30-Day Average	10.73%	10.40%
90-Day Average	10.63%	10.28%
180-Day Average	10.72%	10.33%
Combined Proxy Group		
30-Day Average	10.15%	10.05%
90-Day Average	10.12%	10.02%
180-Day Average	10.24%	10.12%

B. Quarterly Growth DCF Model

Q. Please briefly describe the Quarterly Growth DCF model.

A. As noted earlier, the Constant Growth DCF model is based on several limiting assumptions, one of which is that dividends are paid annually. However, most dividend-paying companies, including utilities, pay dividends on a quarterly (as opposed to an annual) basis. Although the dividend yield adjustment discussed earlier is meant to address that assumption (by increasing the current dividend yield by one-half of the expected growth rate), it does not fully account for the quarterly receipt and reinvestment of dividends. As a consequence, the Constant Growth DCF model likely understates the cost of equity.

[21] Exh. JEN-4. Average of the mean and median proxy group results using mean growth rates.

The Quarterly Growth DCF model specifically incorporates investors' expectations of the quarterly payment of dividends, and the associated quarterly compounding of those dividends as they are reinvested at the required ROE. As noted by Dr. Roger Morin:

> Clearly, given that dividends are paid quarterly and that the observed stock price reflects the quarterly nature of dividend payments, the market-required return must recognize quarterly compounding, for the investor receives dividend checks and reinvests the proceeds on a quarterly schedule ... The annual DCF model inherently understates the investors' true return because it assumes all cash flows received by investors are paid annually.[22]

Q. How is the dividend yield component of the Quarterly Growth DCF model calculated?

A. To reflect the timing and compounding of quarterly dividends more accurately, the model replaces the "*D*" component of the Constant Growth DCF equation with the following equation:

$$D = d_1(1+k)^{0.75}+d_2(1+k)^{0.50}+d_3(1+k)^{0.25}+d_4(1+k)^{0} \quad [2]$$

where:

d_1, d_2, d_3, d_4 = expected quarterly dividends over the coming year; and

k = the required Return on Equity.

Because the required ROE (k) is a variable in the dividend yield calculation, the Quarterly Growth DCF model is solved iteratively.

To calculate the expected dividends over the coming year for the proxy companies (i.e., $d_1, d_2, d_3,$ and d_4), I obtained the last four paid quarterly dividends for

[22] Roger A. Morin, Ph.D., New Regulatory Finance, Public Utility Reports, Inc., 2006 at 344.

each company and multiplied them by one plus the growth rate (i.e., $1 + g$). For the P_0 component of the dividend yield, I used the same average stock prices applied in the Constant Growth DCF analysis for each proxy company.

Q. What are the results of your Quarterly Growth DCF analysis?

A. My Quarterly Growth DCF results are summarized in Figure 7, below (see also Exh. JEN-5). As with my Constant Growth DCF results, I rely on the average of the mean and median proxy group results and give more weight to the results excluding Southwest Gas.

Figure 7: Quarterly Growth DCF Results[23]

	Mean ROE (Including SWX)	**Mean ROE (Excluding SWX)**
Gas Proxy Group		
30-Day Average	10.99%	10.66%
90-Day Average	10.89%	10.53%
180-Day Average	10.99%	10.58%
Combined Proxy Group		
30-Day Average	10.32%	10.22%
90-Day Average	10.29%	10.19%
180-Day Average	10.39%	10.28%

[23] Exh. JEN-5. Average of the mean and median proxy group results using mean growth rates.

C. Capital Asset Pricing Model and Empirical Capital Asset Pricing Model

Q. Please describe the general form of the CAPM.

A. The CAPM is a risk premium method that estimates the cost of equity for a given security as a function of a risk-free return plus a risk premium to compensate investors for the non-diversifiable or "systematic" risk of that security. As shown in Equation [3], the CAPM is defined by four components, each of which theoretically is a forward-looking estimate:

$$K_e = r_f + \beta(r_m - r_f) \qquad [3]$$

where:

K_e = the required market ROE for a security;

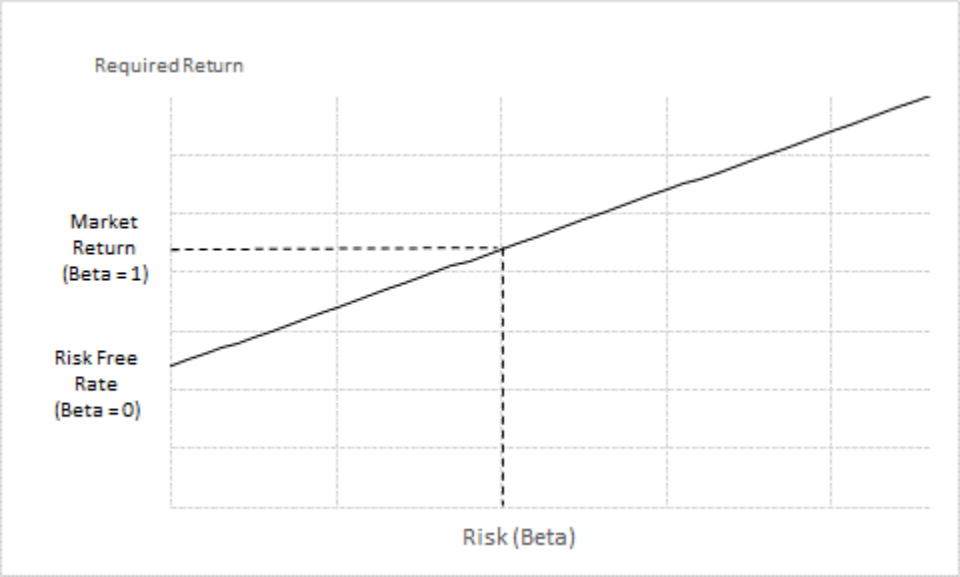
β = the Beta coefficient of that security;

r_f = the risk-free rate of return; and

r_m = the required return on the market as a whole.

Equation [3] describes the Security Market Line ("SML"), or the CAPM risk-return relationship, depicted in Figure 8 below. The intercept is the risk-free rate (r_f) that has a Beta coefficient of zero, and the slope is the expected market risk premium ($r_m - r_f$). As shown in Figure 8, the slope of the line is upward sloping, illustrating the principle that investments of higher risk require a higher return. By definition, r_m, the return on the market, has a Beta coefficient of 1.00.

Figure 8: Security Market Line



The CAPM assumes that all non-market or unsystematic risk, can be eliminated through diversification. The risk that cannot be eliminated through diversification is called market, or systematic, risk. Therefore, the CAPM assumes that investors require compensation only for systematic, or market, risk. Systematic (or non-diversifiable) risk is measured by the Beta coefficient, which is defined as:

$$\beta_j = \frac{\sigma_j}{\sigma_m} \text{ x } \rho_{j,m} \quad [4]$$

where σ_j is the standard deviation of returns for company "*j*," σ_m is the standard deviation of returns for the broad market (as measured, for example, by the S&P 500 Index), and $\rho_{j,m}$ is the correlation of returns in between company *j* and the broad market. The Beta coefficient, therefore, represents both relative volatility (i.e., the standard deviation) of returns, and the correlation in returns between the subject company and the overall market. Intuitively, higher Beta coefficients indicate that the subject

company's returns have been relatively volatile and have moved in tandem with the overall market.

Q. What risk-free rates do you assume in your CAPM analysis?

A. I apply two estimates of the risk-free rate: (1) the current 30-day average yield on 30-year Treasury bonds (i.e., 4.92 percent)[24] and (2) a projected 30-year Treasury yield (i.e., 4.52 percent).[25]

Q. Why do you rely on the 30-year Treasury yield as the risk-free rate in your CAPM analysis?

A. In determining the security most relevant to the application of the CAPM, the term (or maturity) should approximate the life of the underlying investment. Natural gas utilities are typically long-duration investments; therefore, the 30-year Treasury yield is more suitable for the risk-free rate applied in the CAPM.

Q. What Beta coefficients did you use in your CAPM model?

A. As shown in Exh. JEN-7, I rely on two estimates of the Beta coefficient. I first consider the average five year Beta coefficients from Value Line and Bloomberg for each proxy company as of June 30, 2025. Beta coefficients from both services are calculated using weekly returns over a five-year period, adjusted to reflect the tendency of Beta coefficients to regress toward the market mean of 1.00. I also consider Bloomberg Beta coefficients calculated using weekly return data over the ten years ended June 30, 2025,

[24] Source: Bloomberg Professional Service, as of June 30, 2025.

[25] The average of: (1) the average projected 30-year Treasury yield for the six quarters ended Q4 2026 and (2) the average long-term projected 30-year Treasury yield for the years 2027-2031 and 2032-2036, reported by *Blue Chip Financial Forecasts*. *See, Blue Chip Financial Forecasts* Vol. 44, No. 7, July 1, 2025, at 2 and *Blue Chip Financial Forecasts,* Vol. 44, No. 6, June 2, 2025, at 14.

rather than a five-year period. The 10-year Bloomberg Beta coefficients provide a longer term view of the proxy group's relative risk and attenuate any perceived distortion in the five year Beta coefficients associated with short-term market events.

Q. What estimates of the expected market return do you use to calculate the market risk premium?

A. I apply two estimates of the expected market return. The first calculates the market capitalization-weighted ROE of the S&P 500 Index by applying the Constant Growth DCF formula described earlier to the S&P 500 Index. The second estimate applies the long run historical arithmetic average market return of 12.17 percent between 1926 and 2024 reported by Kroll (formerly Duff & Phelps).[26]

Q. Please explain your forward-looking DCF approach to estimating the market return.

A. For the forward-looking market return estimate, I use the Constant Growth DCF formula to estimate the total market return for the S&P 500 Index. I consider projected earnings growth rates and dividend yields from three sources: (1) S&P's Earnings and Estimates report; (2) Bloomberg Professional; and (3) Value Line. As shown in Figure 9 these independent estimates of the expected market return range from 14.81 percent to 16.06 percent. (see also Exh. JEN-6). To be conservative, I rely on the lowest forward market return estimate from Value Line of 14.81 percent.

[26] Source: Kroll, Cost of Capital Navigator.

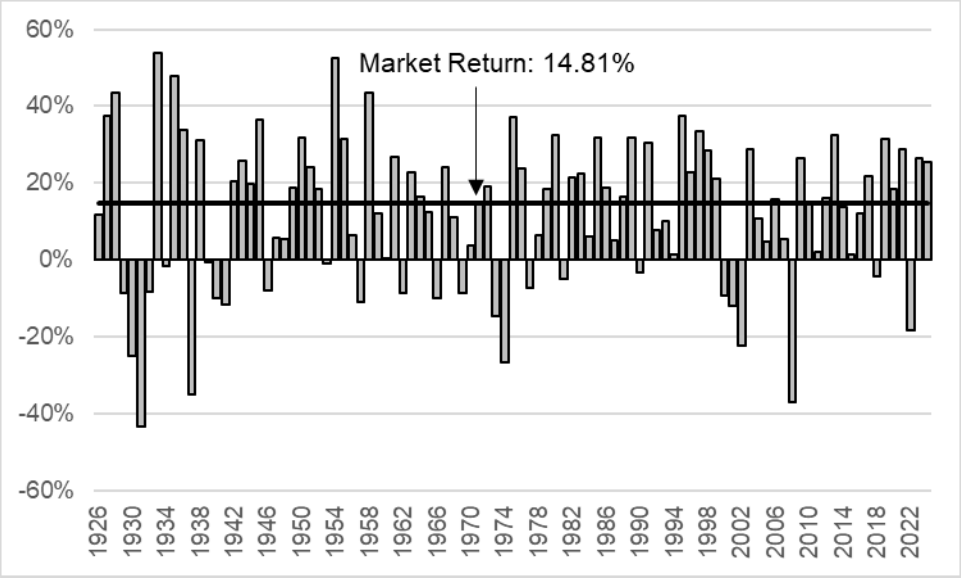
Figure 9: DCF-Based Expected Market Return

Source	Market Return
S&P Earnings & Estimates	15.56%
Bloomberg Professional	16.06%
Value Line	14.81%

Q. Is the Value-Line DCF-based market return estimate of 14.81 percent consistent with actual observed returns on the market?

A. Yes, it is. As shown in Figure 10 below, an expected market return of 14.81 percent or higher occurred in 50 of the last 99 years (i.e., more than 50 percent of the time). Since 2009, the annual market return has averaged 15.58 percent, and equaled or exceeded 14.81 percent in 10 of the last 16 years. In other words, an annual market return of 14.81 percent, or higher, has occurred frequently and is not an outlier.

Figure 10: Annual Market Return, 1926-2024[27]



[27] Source: Kroll, 2023 SBBI Yearbook, Appendix A-1, A-7 (years 1926-2022); Cost of Capital Navigator (years 2023-2024).

To moderate the effect of the forward-looking market return, however, I average the forward-looking return of 14.81 percent with the long-term average historical return between 1926 and 2024 of 12.17 percent as reported by Kroll (formerly Duff & Phelps). I then subtracted the current and projected risk-free rates to calculate a "blended" MRP of 8.57 percent and 8.97 percent, respectively.

Q. Do you also perform a CAPM analysis applying only the MRP calculated using the long-term historical average market return?

A. Yes. Although the estimation of the cost of equity is a forward-looking analysis, it may be reasonable to expect that, over the long term, the market return will revert to its long-run historical arithmetic average. Therefore, I also perform a CAPM analysis using only the current long-term historical average market return of 12.17 percent. Subtracting the current and projected risk-free rates from long-term historical average market return of 12.17 percent produces MRP estimates of 7.25 percent and 7.65 percent, respectively.

Q. What are the results of your CAPM analysis?

A. As shown in Figures 11 and 12 below, the CAPM results range from 10.05 percent to 11.34 percent for the Gas Proxy Group and 9.98 percent to 11.31 percent for the Combined Proxy Group (see Exh. JEN-7).

Figure 11: Summary of CAPM Results (Gas Proxy Group)[28]

	Current Risk-Free Rate (4.92%)	Projected Risk-Free Rate (4.52%)
Blended Market Return, 5-Yr Average Beta Coefficients	11.11%	11.00%
Blended Market Return, 10-Yr Bloomberg Beta Coefficients	11.34%	11.24%
Historical Market Return, 5-Yr Average Beta Coefficients	10.16%	10.05%
Historical Market Return, 10-Yr Bloomberg Beta Coefficients	10.35%	10.25%

Figure 12: Summary of CAPM Results (Combined Proxy Group)[29]

	Current Risk-Free Rate (4.92%)	Projected Risk-Free Rate (4.52%)
Blended Market Return, 5-Yr Average Beta Coefficients	11.04%	10.92%
Blended Market Return, 10-Yr Bloomberg Beta Coefficients	11.31%	11.21%
Historical Market Return, 5-Yr Average Beta Coefficients	10.09%	9.98%
Historical Market Return, 10-Yr Bloomberg Beta Coefficients	10.32%	10.22%

Q. Did you consider another form of the CAPM?

A. Yes, I also consider the Empirical CAPM ("ECAPM") approach, which calculates the product of the adjusted Beta coefficient and the Market Risk Premium and applies a weight of 75.00 percent to that result. The model then applies a 25.00 percent weight

[28] Exh. JEN-7. Average of the proxy group mean and median.

[29] Exh. JEN-7. Average of the proxy group mean and median.

to the Market Risk Premium, without any effect from the Beta coefficient.[30] The results of the two calculations are summed, along with the risk-free rate, to produce the ECAPM result, as noted in Equation [5] below:

$$k_e = r_f + 0.75\beta(r_m - r_f) + 0.25(r_m - r_f) \quad [5]$$

where:

k_e = the required market ROE;

β = the adjusted Beta coefficient of an individual security;

r_f = the risk-free rate of return; and

r_m = the required return on the market as a whole.

Q. What is the benefit of the ECAPM approach?

A. The ECAPM addresses the tendency of the CAPM to underestimate the cost of equity for companies, such as regulated utilities, with relatively low Beta coefficients. As discussed below, the ECAPM recognizes academic research that indicates the risk-return relationship is flatter than that estimated by the CAPM, and that the CAPM under-estimates the Alpha (α), or the constant return term.[31]

Numerous tests of the CAPM have measured the extent to which security returns and Beta coefficients are related as predicted by the CAPM. The ECAPM method reflects the finding that the actual SML described by the CAPM formula is not as steeply sloped as the predicted SML.[32] Fama and French state that "[t]he returns on

[30] *See, e.g.*, Roger A. Morin, Ph.D., New Regulatory Finance, at 189-190 (2006).

[31] Roger A. Morin, Ph.D., New Regulatory Finance, at 191 (2006).

[32] Roger A. Morin, Ph.D., New Regulatory Finance, at 175 (2006). The Security Market Line plots the CAPM estimate on the Y-axis, and Beta coefficients on the X-axis.

the low beta portfolios are too high, and the returns on the high beta portfolios are too low."[33] Similarly, Morin states:

> With few exceptions, the empirical studies agree that . . . low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted. . . .
>
> Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:
>
> $$K = R_F + x\,(R_M - R_F) + (1-x)\beta(R_M - R_F)$$
>
> where x is a fraction to be determined empirically. The value of x that best explains the observed relationship Return = 0.0829 + 0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:
>
> $$K = R_F + 0.25(R_M - R_F) + 0.75\,\beta(R_M - R_F)$$ [34]

Q. Does the use of adjusted Beta coefficients in the ECAPM address the empirical issues with the CAPM?

A. No, it does not. Beta coefficients are adjusted because of their general regression tendency to converge toward 1.00 over time, i.e., over successive calculations. As also noted earlier, numerous studies have determined that at any given point in time, the SML described by the CAPM formula is not as steeply sloped as the predicted SML. To that point, Morin explains:

> Some have argued that the use of the ECAPM is inconsistent with the use of adjusted betas, such as those supplied by Value Line and Bloomberg. This is because the reason for using the ECAPM is to allow for the tendency of betas to regress toward the mean value of 1.00 over time, and, since Value Line betas are already adjusted for such trend, an ECAPM analysis results in double-counting. This argument is erroneous. Fundamentally, the ECAPM is not an adjustment, increase or decrease, in beta. This is obvious from the fact that the expected return on high beta securities is actually lower than that produced by the

[33] Eugene F. Fama & Kenneth R. French, *The Capital Asset Pricing Model: Theory and Evidence*, Journal of Economic Perspectives, Vol. 18, No. 3, Summer 2004, at 33.

[34] Roger A. Morin, Ph.D., New Regulatory Finance at 175, 190 (2006).

> CAPM estimate. The ECAPM is a formal recognition that the observed risk-return tradeoff is flatter than predicted by the CAPM based on myriad empirical evidence. The ECAPM and the use of adjusted betas comprised two separate features of asset pricing. Even if a company's beta is estimated accurately, the CAPM still understates the return for low-beta stocks. Even if the ECAPM is used, the return for low-beta securities is understated if the betas are understated. Referring back to Figure 6-1, the ECAPM is a return (vertical axis) adjustment and not a beta (horizontal axis) adjustment. Both adjustments are necessary.[35]

Therefore, it is appropriate to rely on adjusted Beta coefficients in both the CAPM and ECAPM.

Q. Are you aware of academic studies that support the use of the ECAPM for utilities?

A. Yes, I am. In a 2011 study by Stéphane Chrétien and Frank Coggins, the authors studied the CAPM's ability to estimate the risk premium for the utility industry in particular subgroups of utilities.[36] The study considered the traditional CAPM approach, the Fama-French three-factor model, and a model similar to the ECAPM. In the study, the ECAPM relied on adjusted Beta coefficients similar to *Value Line*'s approach. As Chrétien and Coggins found, the ECAPM significantly outperformed the traditional CAPM model at predicting the observed risk premium for the various utility subgroups.

[35] Roger A. Morin, Ph.D., New Regulatory Finance, at 191 (2006).

[36] Stéphane Chrétien and Frank Coggins, *Cost of Equity for Energy Utilities: Beyond The CAPM*, Energy Studies Review, Vol. 18, No. 2 (2011).

Q. What are the results of your ECAPM analyses?

A. I apply the same market return, Beta coefficient, and risk-free rates described earlier in my ECAPM analysis to Equation [5] above. The results of my ECAPM analyses are summarized in Figure 13 and Figure 14 below (see Exh. JEN-7).

Figure 13: Summary of ECAPM Results (Gas Proxy Group)[37]

	Current Risk-Free Rate (4.92%)	Projected Risk-Free Rate (4.52%)
Blended Market Return, 5-Yr Average Beta Coefficients	11.71%	11.62%
Blended Market Return, 10-Yr Bloomberg Beta Coefficients	11.88%	11.81%
Historical Market Return, 5-Yr Average Beta Coefficients	10.66%	10.58%
Historical Market Return, 10-Yr Bloomberg Beta Coefficients	10.81%	10.73%

Figure 14: Summary of ECAPM Results (Combined Proxy Group)[38]

	Current Risk-Free Rate (4.92%)	Projected Risk-Free Rate (4.52%)
Blended Market Return, 5-Yr Average Beta Coefficients	11.65%	11.56%
Blended Market Return, 10-Yr Bloomberg Beta Coefficients	11.85%	11.78%
Historical Market Return, 5-Yr Average Beta Coefficients	10.61%	10.53%
Historical Market Return, 10-Yr Bloomberg Beta Coefficients	10.79%	10.71%

[38] Exh. JEN-7. Average of the proxy group mean and median.

D. Bond Yield Plus Risk Premium Approach

Q. Please describe the Bond Yield Plus Risk Premium approach.

A. The Bond Yield Plus Risk Premium approach is based on the basic financial principle of risk and return, which states that equity investors require a premium over the return required as a bondholder to account for the incremental residual risk associated the cost of equity as the sum of equity risk premium and the yield on a particular class of bonds.

Q. Please explain how you perform your Bond Yield Plus Risk Premium analysis.

A. I first define the equity risk premium as the difference between the authorized ROE and the then-prevailing 30-year Treasury bond yield, using the authorized ROE for 1,348 natural gas utility rate proceedings between January 1, 1980, and June 30, 2025. To reflect the prevailing level of bond yields during the pendency of the proceedings, I calculate the average 30-year Treasury yield over the average lag period between the filing of the rate case and the date of the final order (approximately 188 days). For the electric utilities in the Combined Proxy Group, I perform the same analysis using 1,834 electric utility rate cases between January 1, 1980 and June 30, 2025 (with a lag period of 199 days).

Because the data covers several economic cycles, the analysis is helpful in assessing the change in the equity risk premium over time. Prior research, for example, has shown that the equity risk premium is inversely related to the level of bond yields.[39]

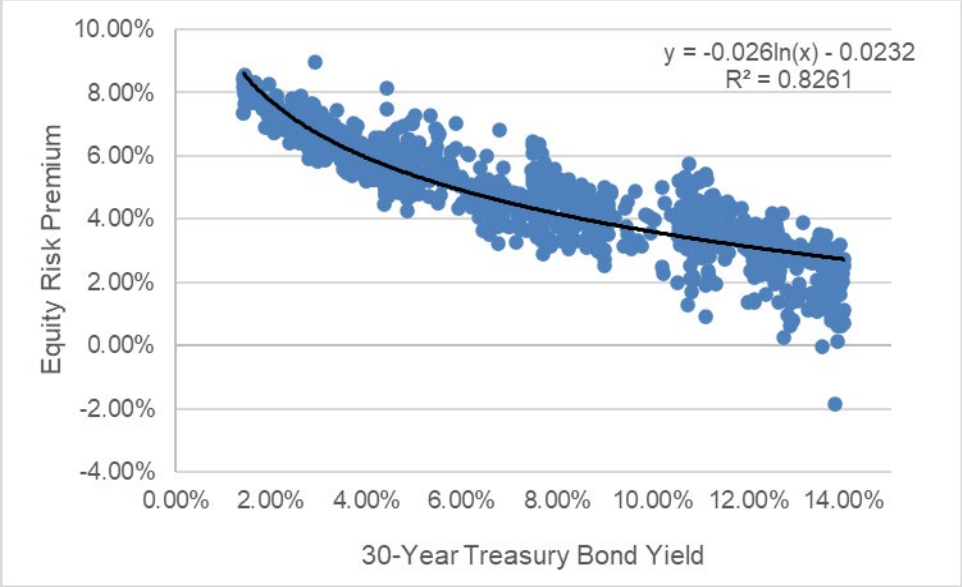
[39] *See*, *e.g.,* Robert S. Harris and Felicia C. Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management at 63-70 (Summer 1992); Eugene F. Brigham, Dilip K. Shome, and Steve R. Vinson, *The Risk Premium Approach to Measuring a Utility's Cost of Equity*, Financial Management at 33-45 (Spring 1985); and Farris M. Maddox, Donna T. Pippert, and Rodney N. Sullivan, *An Empirical Study of Ex Ante Risk Premiums for the Electric Utility Industry*, Financial Management at 89-95 (Autumn 1995).

Q. How do you analyze the relationship between bond yields and the equity risk premium?

A. I estimate the relationship between bond yields and the equity risk premium by applying a regression analysis, in which the equity risk premium described above is the dependent variable, and the 30-year Treasury yield is the independent variable. To account for the variability in bond yields and authorized ROEs over several decades, I use the semi-log regression, in which the equity risk premium ("*RP*") is expressed as a function of the natural log of the 30-year Treasury yield ("T_{30}"):

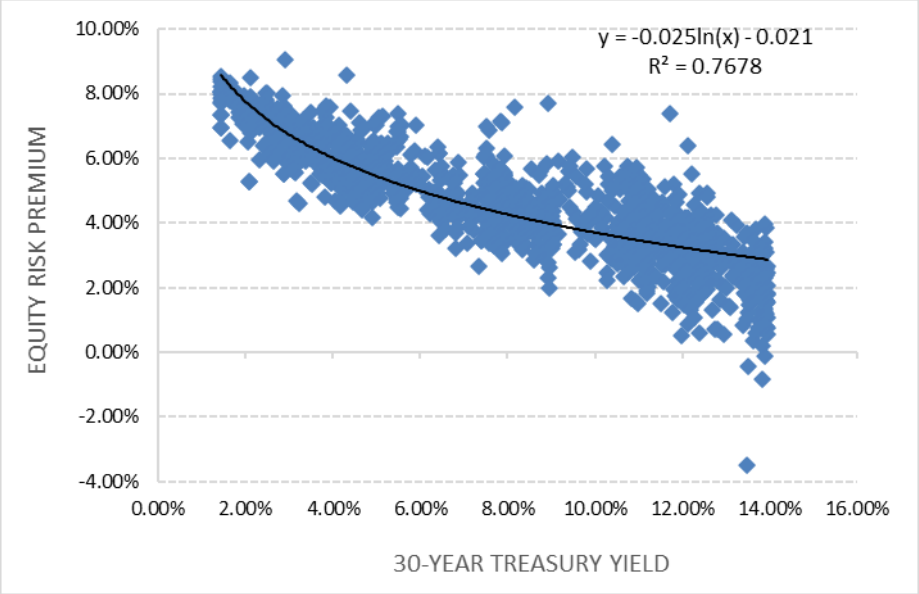
$$RP = \alpha + \beta \left(LN \left(T_{30}\right)\right) \quad [6]$$

Figure 15: Gas Equity Risk Premium[40]



[40] Exh. JEN-8.

Figure 16: Electric Equity Risk Premium[41]



As Figure 15 and Figure 16 illustrate, the equity risk premium increases as interest rates fall. The finding that the equity risk premium and interest rates are inversely related is supported by published research. For example, Dr. Roger Morin notes that: "… [p]ublished studies by Brigham, Shome, and Vinson (1985), Harris (1986), Harris and Marston (1992, 1993), Carleton, Chambers, and Lakonishok (1983), Morin (2005), McShane (2005), and others demonstrate that, beginning in 1980, risk premiums varied inversely with the level of interest rates – rising when rates fell and declining when interest rates rose."[42] Based on the regression coefficients in Figure 15 and Figure 16, the implied ROE is between 10.15 percent and 10.41 percent (see Figure 17 and Exh. JEN-8).

[41] Exh. JEN-8.

[42] Roger A: Morin, Ph.D., New Regulatory Finance, Public Utilities Reports, Inc., 2006, at 128 [clarification added].

Figure 17: Summary of Bond Yield Plus Risk Premium Results[43]

Gas Risk Premium	**30-Year Treasury Bond**	**Risk Premium**	**Return on Equity**
Current 30-Year Treasury	4.92%	5.42%	10.33%
Projected 30-Year Treasury	4.52%	5.64%	10.15%
Electric Risk Premium	**30-Year Treasury Bond**	**Risk Premium**	**Return on Equity**
Current 30-Year Treasury	4.92%	5.49%	10.41%
Projected 30-Year Treasury	4.52%	5.70%	10.22%

Q. What are the advantages of the Bond Yield Plus Risk Premium approach?

A. There are several advantages. First, authorized ROEs in other jurisdictions are a significant part of the market information that investors consider when evaluating their investment alternatives. Therefore, they are a direct measure of returns available to other natural gas utilities, as required under the comparable return standard of the *Hope* and *Bluefield* decisions. The level of authorized ROE also provides a signal to investors about the level of regulatory support that a company can expect with regard to its ability to compete for capital and to ensure its financial integrity. An ROE below its peers for a given period may be an impediment to the Company's ability to attract capital and finance the infrastructure required to provide safe, reliable service to its customers. As discussed in Section VI, NW Natural expects to invest approximately $1.75 to $1.9

[43] Exh. JEN-8.

billion in infrastructure in the 2025-2030 period,[44] or approximately 70 percent of the Company's net utility plant at year end 2024.[45] As Company witness Brody J. Wilson explains, it is important that NW Natural maintain a strong balance sheet to attract both debt and equity capital on reasonable terms for the benefit of customers.[46]

Second, the use of the Bond Yield Plus Risk Premium model in conjunction with the DCF and CAPM approaches adds diversity to the model results, which enables a more robust and reliable ROE estimate. The fewer models that are relied upon, the more likely it is that model risk biases the ultimate ROE determination. For the same reasons that diversity is a wise and prudent investment strategy, diversity of the models used to estimate the ROE is similarly prudent, as it reduces the risk that the results of any single model may not reasonably reflect investors' return requirements.

A third advantage of the Bond Yield Plus Risk Premium approach is its simplicity and reliance on fewer contentious inputs. Lastly, the Bond Yield Plus Risk Premium approach adds a measure of stability because it is less vulnerable to changes in market data. As shown in the regression equation in Figures 15 and 16, the change in the risk premium (and therefore the ROE estimate) that corresponds with a change

[44] Northwest Natural Holdings June 2025 Investor Presentation, at 10; 70% of total holding company capital expenditures of $2.5 to $2.7 billion allocated to NW Natural. Accessible at: https://s23.q4cdn.com/611156738/files/doc_presentations/2025/Jun/04/June-2025-Investor-Presentation_Final.pdf

[45] Oregon Public Utilities Commission Docket RG 40, NW Natural's Earnings Review for the 12 Months Ended December 31, 2024 (filed April 29, 2025). [46] Confidential Direct Testimony of Brody J. Wilson, Exh. BJW-1CT.

in bond yields is less than one-to-one. For example, as shown in Figure 17 above, using the Gas Risk Premium analysis, a 40-basis point increase in the bond yield (from 4.52 percent to 4.92 percent) results in an 18-basis point change in the ROE from 10.15 percent to 10.33 percent.

Q. Which Risk Premium results do you rely on for your two proxy groups?

A. For the Gas Proxy Group, I rely on average of the Gas Risk Premium results using current and projected 30-year Treasury bond yields. For the Combined Proxy Group, I rely on the average of the gas and electric risk premium results using both the current and projected 30-year Treasury bond yields.

VI. BUSINESS RISKS

Q. Are there factors specific to NW Natural's operating environment that you considered in your ROE recommendation?

A. Yes, there are several additional factors that have a direct bearing on NW Natural's ability to earn a fair return and on the Company's riskiness relative to the Gas Proxy Group, including (1) its capital expenditure plan, the regulatory environment in which it operates, and the need to maintain access to capital, (2) the risk associated with decarbonization legislation and electrification, and (3) the Company's significantly smaller size. These factors increase NW Natural's risk relative to the Gas Proxy Group. While I do not make an explicit adjustment to my ROE recommendation to account for these risks, it is important that they are considered in determining the Company's ROE and capital structure in this proceeding.

A. Capital Expenditures, Regulatory Environment, and Capital Access

Q. Do you have any preliminary thoughts on the importance of access to capital for natural gas utilities such as NW Natural?

A. Yes, I do. As a capital-intensive enterprise, the authorized ROE should enable NW Natural to finance capital expenditures and working capital requirements at reasonable rates and to maintain its financial integrity in a variety of economic and capital market conditions. A return that is adequate to attract capital at reasonable terms enables the utility to provide safe, reliable service while maintaining its financial soundness to the benefit of customers.

Natural gas utilities are one of the most capital-intensive market sectors. On average, natural gas utilities generate less than 40 percent of the revenue per dollar of assets than the non-utility U.S. companies covered by Value Line.[47] To fund the significant capital expenditures needed to maintain, expand, and modernize existing infrastructure, natural gas utilities require sufficient internally generated cash flow and ongoing access to investor supplied capital. Because natural gas utilities tend to be cash flow negative (i.e., cash spent on plant investment is more than cash flow received from operations), it is critical that regulation provide predictable, adequate, and achievable allowed returns that support the financial integrity of the utility.

[47] Source: Value Line, accessed July 18, 2024.

Q. Please summarize the Company's capital expenditure plan.

A. The Company estimates that from 2025-2030 it will invest approximately $1.75 to $1.9 billion in capital.[48] The planned investments are primarily related to safety and reliability investments in the pipeline and storage systems, the Company's meter modernization program, public works projects, information technology and security, renewable natural gas projects, and customer growth.[49] In total, these capital expenditures are equal to approximately 70 percent of the Company's total net utility plant in service of $2.6 billion as of December 31, 2024.[50]

Q. Does the regulatory environment influence utilities' access to capital?

A. Yes, it does. The regulatory environment is a key driver of investors' assessment of a utility's risk. Investors and rating agencies understand that a constructive regulatory environment is critical to support utilities' credit ratings and financial integrity, especially during adverse market conditions. Ratings agencies also recognize the importance of the regulatory environment when assessing a utility's business risk profile.

Moody's considers the regulatory structure to be so important that 50 percent of the factors that weigh in a ratings determination are related to the nature of regulation.[51] The predictability and consistency of regulatory actions are among the key factors considered by Moody's in assessing the regulatory framework:

> As the revenues set by the regulator are a primary component of a utility's cash flow, the utility's ability to obtain predictable and supportive treatment within its regulatory framework is one of the most significant factors in assessing a utility's credit quality. The regulatory framework generally provides more certainty around a utility's cash flow and typically allows the company to operate with significantly less cushion in its cash flow metrics than comparably rated companies in other industrial sectors.
>
> ***
>
> In situations where the regulatory framework is less supportive, or is more contentious, a utility's credit quality can deteriorate rapidly.[52]

S&P states that regulatory advantage is "of critical importance" because "[i]t defines the environment in which a utility operates and has a significant bearing on a utility's financial performance."[53] S&P explains that it considers four subfactors when assessing a utility's ability to recover all its costs "on time and in full – and to earn a return on the capital it deploys."[54] Those four subfactors are (1) regulatory stability, (2) tariff-setting procedures and design, (3) financial stability, and (4) regulatory independence and insulation.[55] With respect to capital expenditures, S&P notes that a

[51] Moody's Ratings, Rating Methodology, *Regulated Electric and Gas Utilities,* at 2 (August 6, 2024).

[52] Moody's Investors Service, Regulatory Frameworks – Ratings and Credit Quality for Investor-Owned Utilities at 2 (June 18, 2010).

[53] S&P Global Ratings, *Sector-Specific Corporate Methodology*, Section 29 Regulated Utilities, at 147 (April 4, 2024).

[54] S&P Global Ratings, *Sector-Specific Corporate Methodology*, Section 29 Regulated Utilities, at 147 (April 4, 2024).

[55] S&P Global Ratings, *Sector-Specific Corporate Methodology*, Section 29 Regulated Utilities, at 147 (April 4, 2024).

regulatory "framework's ability to attract long-term capital, and the availability of capital support during construction," support a utility's financial stability as they "alleviate funding and cash flow pressure when heavy investment is needed."[56] Thus, predictability and consistency of regulatory actions are among the primary concerns for the rating agencies, as is full and timely cost recovery, including recovery of capital costs.

Q. Do credit rating agencies recognize the risk associated with increased capital expenditures?

A. Yes. From a credit perspective, the additional pressure on cash flows associated with high levels of capital expenditures exerts corresponding pressure on credit metrics and, therefore, credit ratings. To that point, S&P explains the importance of regulatory support for large capital projects:

> When applicable, a jurisdiction's willingness to support large capital projects with cash during construction is an important aspect of our analysis. This is especially true when the project represents a major addition to rate base and entails long lead times and technological risks that make it susceptible to construction delays. Broad support for all capital spending is the most credit-sustaining. Support for only specific types of capital spending, such as specific environmental projects or system integrity plans, is less so, but still favorable for creditors. Allowance of a cash return on construction work-in-progress or similar ratemaking methods historically were extraordinary measures for use in unusual circumstances, but when construction costs are rising, cash flow support could be crucial to maintain credit quality through the spending program. Even more favorable are those jurisdictions that present an opportunity for a higher return on capital projects as an incentive to investors.[57]

[56] S&P Global Ratings, *Sector-Specific Corporate Methodology*, Section 29 Regulated Utilities, at 147 (April 4, 2024).

[57] S&P Ratings Direct, "Assessing U.S. Investor-Owned Utility Regulatory Environments," at 7 (August 10, 2016).

Moody's also notes that increasing capital expenditures are pressuring utility credit profiles by widening cash flow deficits and weakening their financial strength:

> Credit pressure is emerging most acutely for companies with large, complete or multiyear projects or for those that are experiencing a delay in the recovery of investment costs. Unlike exogenous events of recent year – such as severe storms, commodity price spikes and the COVID-19 pandemic, which we viewed as temporary events – capital spending and related financings are core long-term financial policy issues.[58]

To the extent that the regulatory environment does not enable timely and sufficient cost recovery of its full cost of doing business, including capital costs, the Company will face increased pressure on its credit metrics thus raising the cost of both debt and equity. Maintaining the ability to access to capital markets on favorable terms, in the form of financial integrity (i.e., capital structure and return on equity) is especially important for utilities and their customers during periods of significant capital investment.

Q. How does the regulatory environment in which a utility operates affect its cost of capital?

A. The regulatory environment can significantly affect both the access to and the cost of capital in several ways. First, the proportion and cost of debt capital available to utility companies are influenced by the rating agencies' assessment of the regulatory environment. Regulatory decisions regarding the authorized ROE and capital structure have direct consequences for the subject utility's internal cash flow generation (sometimes referred to as "Funds from Operations," or "FFO"; or "Cash from

[58] Moody's Ratings, Sector In-Depth, "High capital spending will weigh on credit quality without supportive company actions," at 2 (October 21, 2024).

Operations," or "CFO"). Because credit ratings are intended to reflect the ability to meet financial obligations as they come due, the ability to generate the cash flows required to meet those obligations (and to provide an additional amount for unexpected events) is of critical importance to debt investors. Two of the most important metrics used to assess that ability are the ratios of FFO to debt, and FFO to interest expense, both of which are directly affected by regulatory decisions regarding the appropriate rate of return and capital structure.

In short, supportive regulation supports credit profiles. Investors recognize that an authorized capital structure and ROE that are reasonable, but subject to earnings attrition due to unfavorable regulatory or economic factors, do not provide assurance that the utility will have a reasonable opportunity to recover its costs, or to earn a reasonable return. The authorized capital structure and ROE affect not only the cash flow-related metrics that measure financial strength, but also provide an indication of the degree of regulatory support, and risk, associated with a given utility and jurisdiction. Thus, the authorized ROE and capital structure are important signals of regulatory support and financial integrity. Consequently, a utility that operates in a less predictable and more challenging regulatory environment is likely to be viewed as a riskier investment; this may result in lower credit ratings, constrained access to capital (particularly in volatile and adverse market environments), and higher costs of both debt and equity, all else equal. To meet the obligation to serve, it is in customers' best interests to ensure that a utility has efficient access to capital on reasonable terms in all market environments.

Q. Please summarize the Company's proposed Multiyear Rate Plan.

A. As explained in the Direct Testimony of Company witness Kyle T. Walker (Exh. KTW-1T), pursuant to RCW 80.28.425, NW Natural is proposing a three-year rate plan based on a test year ending March 31, 2025. Rate year one ("RY1") covers August 1, 2026 through July 31, 2027. Rate year two ("RY2") covers August 1, 2027 through July 31, 2028. Rate year three ("RY3") covers August 1, 2028 through July 31, 2029. The proposed plan includes an asymmetrical true-up mechanism that credits surplus earnings back to customers if earnings are more than 0.5 percent (50 basis points) above the ROE authorized in this proceeding. However, the Company would bear the risk of any underearning. The Company also proposes performance metrics aligned with the Commission's objectives of developing resilient, reliable, and customer-focused distribution systems; enhancing customer affordability; advancing equity in utility operations; and supporting environmental improvements. Please refer to the Direct Testimony of Company witness Natasha C. Siores (Exh. NCS-1T) for details on the proposed performance metrics.

Q. Have you compared the Company's regulatory risk relative to the natural gas utilities within the proxy group?

A. Yes, I have. To assess the regulatory environment of the proxy companies and NW Natural, I reviewed the key cost recovery mechanisms and ratemaking frameworks for each of the natural gas operating companies within the proxy group in the jurisdictions in which they operate, including the cost recovery and volumetric risk mitigation mechanisms in place, test year, and rate base methodology.

As shown in Exh. JEN-9, like NW Natural, all the proxy companies with a retail supply obligation have a purchased gas cost recovery mechanism. Further, like NW Natural, 71 percent have a mechanism to recover energy efficiency program expenses. Additionally, like NW Natural, for 57 percent of the proxy companies, the regulator allows a partially- or fully-forecasted test year. However unlike NW Natural, all the proxy companies have a mechanism that fully or partially mitigates volumetric risk (e.g., weather normalization adjustment, decoupling, or lost revenue adjustment mechanism). Additionally, 96 percent of the proxy companies have a mechanism to recover capital investment or infrastructure replacement capital outside base rates, whereas NW Natural does not. The Company's proposed Multiyear Rate Plan, however, mitigates some of the risk associated with a lack of capital cost recovery mechanism by recovering capital investment that is used and useful after the rate-effective date. In other words, the Multiyear Rate Plan would render the Company more comparable to the vast majority of the Gas Proxy Group companies.

From an investor perspective, the Company's regulatory mechanisms do not offer any level of risk mitigation that is meaningfully different from the proxy companies. Furthermore, these regulatory mechanisms are only as effective as their implementation, including a compensatory return. It is in customers' best interest that the regulatory environment in Washington be viewed as predictable, balanced, and supportive of utility investment.

Q. Are Multiyear Rate Plans and other alternative regulatory mechanisms common in the industry?

A. Yes, they are. Alternative regulatory mechanisms, including Multiyear Rate Plans, are common in the industry and the financial community is fully aware of their prevalence. In fact, rate adjustment mechanisms and Multiyear Rate Plans have become more common in the industry, not less. The Gas Proxy Group companies use rate adjustment mechanisms similar to NW Natural's rate mechanisms. While the specific details of the mechanics of the rate adjustment mechanisms may differ from utility to utility and jurisdiction to jurisdiction, their objective is the same: To improve the timeliness of cost recovery and mitigate (but not necessarily eliminate) earnings erosion associated with regulatory lag. Because the proxy companies all have mechanisms that improve the timeliness of cost recovery, the Company's regulatory mechanisms, including its proposed Multiyear Rate Plan, simply render it more comparable to its peers.

Q. What are your conclusions regarding the Company's capital investment plan and its regulatory environment on its cost of equity?

A. NW Natural requires ongoing access to capital market access on favorable terms to provide safe and reliable service. The regulatory environment, including the return authorized in this proceeding, is a key determinant of the Company's ability to access external markets under a variety of capital market circumstances as it executes its capital investment plan. It is in the customers' best interests that the outcome of this proceeding is constructive and the regulatory environment for gas utilities in Washington is viewed as stable and predictable.

B. Policy Risk

Q. Please summarize recent legislation enacted by the Washington Legislature regarding decarbonization.

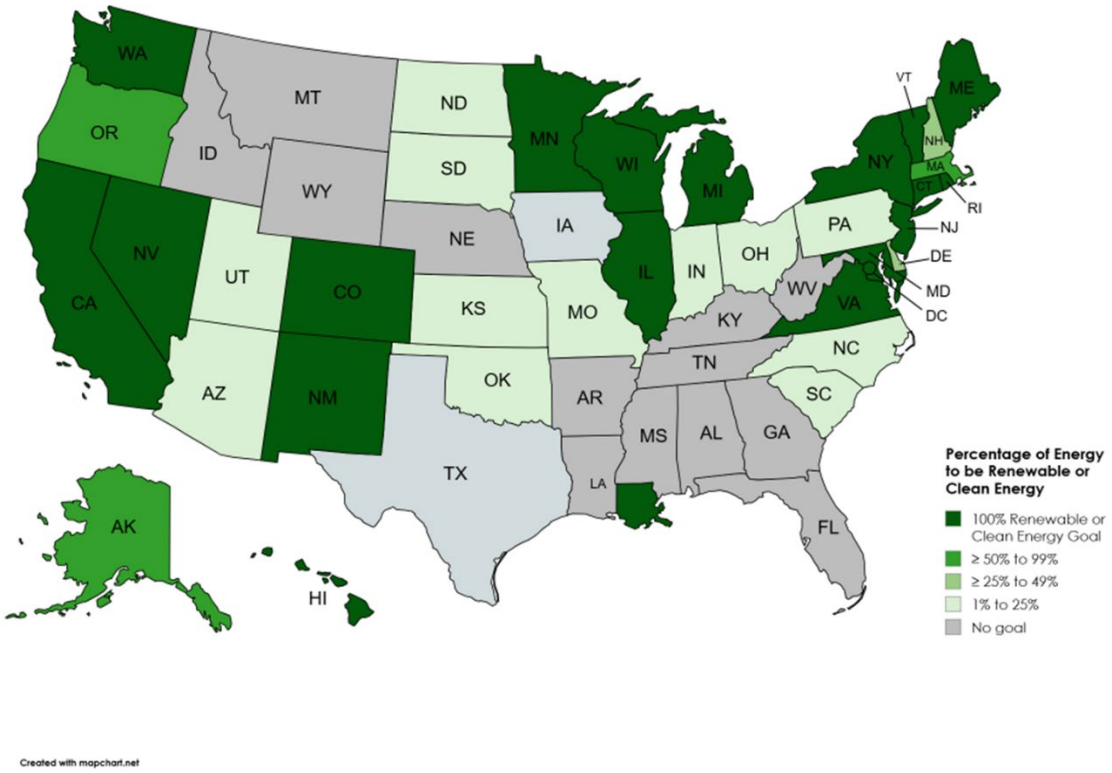
A. In 2019, Governor Inslee signed the Clean Energy Transformation Act, which commits the state to a 100 percent carbon neutral electricity supply by 2030 and 100 percent carbon free by 2045. Additionally, the Climate Commitment Act signed into state law in May 2021 requires utilities including NW Natural to reduce greenhouse gas emissions ("GHG") by 45 percent below 1990 levels by 2030, 70 percent below 1990 levels by 2040, and 95 percent below 1990 levels by 2050.[59] These targets can be achieved through purchased emissions allowances and offsets, purchases of low carbon fuels, and increased energy efficiency and conservation measures.

Addressing climate change is an increasing area of focus for federal, state, and local governments. As shown in Figure 18 below, 20 states have committed to net-zero or 100 percent renewable power targets by 2050 or earlier. As shown in Figure 18, Washington is among the 20 states with the most aggressive clean energy or renewable goals (i.e., "100 percent renewable").[60]

[59] Climate Commitment Act, Chapter 70A.65 RCW. See also, Chapter 173-446 Washington Administrative Code. Accessible at: https://app.leg.wa.gov/RCW/default.aspx?cite=70A.65&full=true&pdf=true.

[60] NW Natural also operates in Oregon, which is ranked in the "aggressive" category of decarbonization goals shown in Figure 18.

Figure 18: U.S. Renewable and Clean Energy Targets[61]



In its January 2025 outlook for the regulated utility sector, S&P Global Ratings noted the risk to LDCs' credit quality associated with policies that limit natural gas end uses, "We expect the longer-term credit quality for some natural gas local distribution companies (LDC) will become increasingly challenging, especially for utilities … whose cities or states have banned new gas connections, severely limiting the growth of natural gas LDCs."[62] The status of building codes that discourage or limit the use of natural gas in Washington is currently subject to litigation, including the King County

[61] Source: Regulatory Research Associates, "Renewable and Clean Energy Targets and Goals by State," as of December 15, 2024. Note that Texas and Iowa have a specific megawatt renewable goal that have been achieved (10,000 MW for Texas and 105 MW for Iowa).

[62] S&P Global Ratings "Industry Credit Outlook 2025: North America Regulated Utilities," at 14 (January 14, 2025).

Superior Court decision that invalidated ballot initiative I-2066.[63] If the building codes are ultimately upheld, this could pressure credit quality for LDCs like NW Natural.

Q. Have the credit rating agencies noted the risk associated with climate policies as a specific risk for NW Natural?

A. Yes. For example, in an April 2024 credit rating report for the Company, S&P explained:

> We also view the energy transition risks in Oregon and Washington as potentially increasing business risk. Washington has implemented decarbonization mandates and Oregon is contemplating various decarbonization initiatives. Furthermore, several cities are contemplating the implementation of a gas ban for new gas connections. We assess these evolving risks as potentially negative for credit quality and will continue to monitor future development.[64]

Similarly, Moody's noted "[e]levated social risk due to higher scrutiny on natural gas as an energy source" and "[l]ong-term risks associated with environmental remediation costs and emission reduction requirements" as credit challenges for NW Natural.[65] Moody's further stated that "[a] rating downgrade could occur if NW Natural's regulatory environment becomes less credit supportive, including material environmental challenges where costs cannot be recovered."[66] In its July 2025 report,

[63] See, e.g., https://washingtonstatestandard.com/2025/03/21/judge-overturns-washington-natural-gas-measure-approved-by-voters/; https://www.everettpost.com/state-news/biaw-asking-scow-for-direct-appeal-of-ruling-against-natural-gas-initiative/.

[64] S&P Global Ratings, "Northwest Natural Holding Co. Downgraded to 'A'; Outlook Negative; Subsidiary Ratings Affirmed; Outlook To Stable," at 2 (April 19, 2024).

[65] Moody's Investors Service, "Credit Opinion: Northwest Natural Gas Company," at 1-2 (July 30, 2024).

[66] Moody's Investors Service, "Credit Opinion: Northwest Natural Gas Company," at 2 (July 30, 2024).

Moody's reiterated its view that NW Natural's "heightened social risk due to state led decarbonization goals" is a credit challenge.[67]

Lastly, Moody's observed that "NW Natural has historically worked collaboratively with its regulator to make energy transition as affordable as possible for customers and we see this trend continuing as the company executes on its energy transmission goals over the next several years."[68] In other words, regulatory support is critical to the Company's ability to mitigate the policy risk it faces.

Q. Do the natural gas utilities in the Gas Proxy Group also face energy transition risk?

A. Yes, however, to a somewhat lesser extent. All but one of the Gas Proxy Group companies operate in multiple jurisdictions, which mitigates the effect of decarbonization policy risk through diversification. For example, Atmos Energy, NiSource, ONE Gas, and Spire operate in jurisdictions in the lowest tier or do not have a renewable energy target shown in Figure 18 above (e.g., Alabama, Mississippi, Louisiana, Kentucky, Kansas, Texas, Missouri, among others).

Q. Has the Commission found that higher ROEs may be needed to support energy transition policies and a utility's credit worthiness?

A. Yes, in Order 09 for Puget Sound Energy ("PSE") in Docket Nos. UE-240004 and UG-240005, the Commission recognized that an upward adjustment in the ROE was "needed to ensure the Company remains able to provide reliable and adequate service

[67] Moody's Investors Service, "Credit Opinion: Northwest Natural Gas Company," at 2 (July 8, 2025).

[68] Moody's Investors Service, "Credit Opinion: Northwest Natural Gas Company," at 6 (July 30, 2024).

to its customers, continues to meet its statutory obligation to transition to clean energy, per its CETA requirements, and remains credit worthy and able to acquire capital for continued operations. Balancing these competing interests goes to the heart of the Commission's responsibility."[69] In that decision, the Commission increased PSE's authorized ROE from 9.4 percent set in 2022 to 9.8 percent in Rate Year 1 and 9.9 percent in Rate Year 2.[70]

Q. What are your conclusions regarding the risk associated with decarbonization policies on NW Natural's cost of equity?

A. As a natural gas-only utility that operates in jurisdictions with more aggressive decarbonization policies, NW Natural is more exposed to the long-term threats to the natural gas utility business. It is critical that supportive regulation enables NW Natural to meet its decarbonization goals while maintaining access to capital.

C. Small Size

Q. To what extent does NW Natural's relatively small size affect its risk profile?

A. Academic literature recognizes that, over the long term, the total returns of smaller companies tend to be higher and more volatile than larger companies even after the relative illiquidity of smaller company stock is taken into account.[71] Figure 19 below

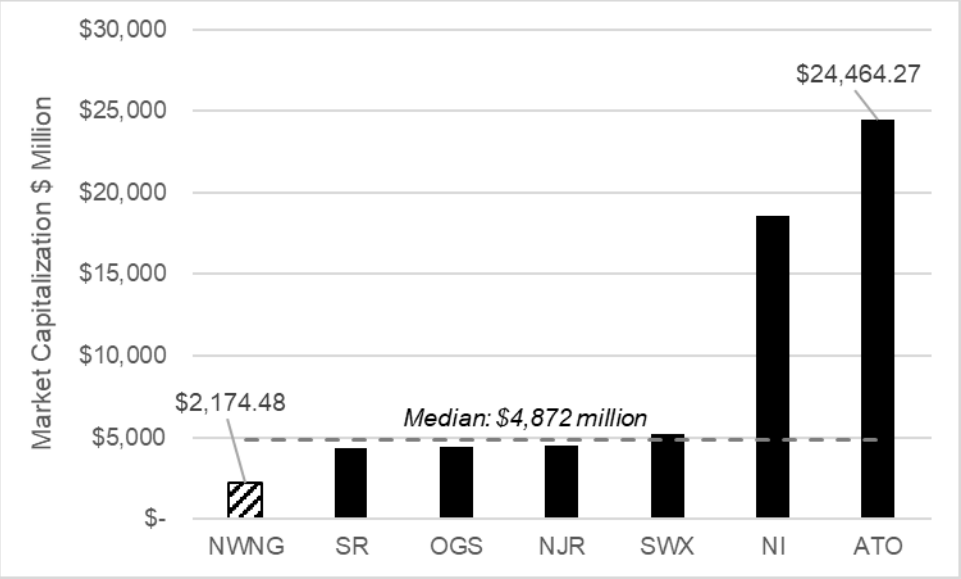
[69] Washington Utilities and Transportation Commission v. Puget Sound Energy, Dockets UE-240004 & UG-240005 (Consolidated), Order 09, at Para. 108 (January 15, 2025). Accessible at: https://www.utc.wa.gov/casedocket/2024/240004/orders.

[70] Washington Utilities and Transportation Commission v. Puget Sound Energy, Dockets UE-240004 & UG-240005 (Consolidated), Order 09, at Para. 109 (January 15, 2025). Accessible at: https://www.utc.wa.gov/casedocket/2024/240004/orders.

[71] *See*, *e.g.*, "Firm Size and Return," Ibbotson SBBI 2015 Classic Yearbook, at 99-100.

shows NW Natural's implied total company market capitalization relative to the Gas Proxy Group.

Figure 19: Comparison of Market Capitalization – Gas Proxy Group[72]



NW Natural's small size relative to its natural gas utility peers means that the Company's earnings may be disproportionately affected by adverse events such as weaker than expected demand for natural gas, plant outages, adverse regulatory rulings, or new legislation. The larger companies in the proxy groups can be expected to have an advantage in raising capital, suggesting that the ROE model results derived from this group could understate NW Natural's cost of equity. For example, Company witness Wilson explains that as a smaller utility, NW Natural's relatively smaller debt issuances are less liquid and therefore command a premium in the market.[73]

[72] Source: S&P Capital IQ, as of June 30, 2025; Exh. JEN-10.

[73] Confidential Direct Testimony of Brody J. Wilson, Exh. BJW-1CT.

Q. How did you estimate the size premium for NW Natural?

A. In its Cost of Capital Navigator, Kroll presents its calculation of the size premium for deciles of market capitalizations relative to the S&P 500 Index. The size premium associated with NW Natural can be estimated as the difference in Kroll's size risk premiums for the Gas Proxy Group median market capitalization and NW Natural's implied market capitalization.

As shown in Exh. JEN-10, the Gas Proxy Group median market capitalization of $4.87 billion corresponds to the fifth decile of Kroll's market capitalization data. Based on Kroll's analysis, the fifth decile has a size premium of 0.74 percent (or 74 basis points). The implied market capitalization for NW Natural is approximately $2.17 billion,[74] which falls within the seventh decile and corresponds to a size premium of 1.19 percent (or 119 basis points). The difference between those size premiums is 45 basis points (1.19 percent – 0.74 percent).

Q. Are there additional observations that support the consideration of a small size premium for NW Natural?

A. Yes, there are. Smaller companies typically have fewer shares outstanding and fewer shares traded than larger companies. Institutional investors[75] typically hold larger numbers of shares in each of their investments for management efficiency. Because

[74] Total company implied market capitalization of $2.17 billion = NW Natural's 2024 common equity of $1.32 billion x the proxy group median market-to-book ratio of 1.64. Because NW Natural's Washington-jurisdictional operations are roughly 12 percent of the Company's total business, the implied market capitalization for the Washington operations on a standalone basis is significantly smaller and would indicate an even larger size premium on a standalone basis.

[75] An institutional investor is a financial entity that invests money on behalf of clients or members, such as mutual funds, pension funds, insurance companies, and endowments.

institutional investors tend to have minimum dollar amounts for individual investments and smaller companies have fewer shares outstanding and lower trading volume, institutional investors' positions in smaller companies result in them owning a greater proportion of outstanding shares. If an institutional investor holds a relatively large portion of the shares of a company, its ability to sell its position without adversely affecting the market price of shares may be limited by the volume of shares traded each day. In other words, their investment is less liquid than it would be for a larger company with more shares outstanding and a higher trading volume. The uncertainty of institutional investors' ability to sell their shares quickly when needed is often referred to as "liquidity risk," and requires a higher expected return.

Amihud and Mendelson explained the following regarding liquidity and the effect on the expected return:

> Liquidity is an important factor in asset pricing. For both stocks, and bonds, the lower the liquidity of an asset (that is, the higher the cost of trading it), the higher the return it is expected to yield.
>
> ***
>
> Risk-averse investors require higher expected returns to compensate for greater risk. Similarly, investors prefer to commit capital to liquid investments, which can be traded quickly and at low cost whenever the need arises. Investments with less liquidity must offer higher expected returns to attract investors.[76]

[76] Yakov Amihud and Haim Mendelson, *Liquidity, Asset Prices and Financial Policy*, Financial Analysts Journal, Vol. 47, No. 6 (Nov-Dec 1991), at 56.

Q. Have you analyzed measures of liquidity for NW Natural relative to the Gas Proxy Group?

A. Yes, in addition to market capitalization as a measure of size, I analyzed three measures of liquidity for the publicly traded holding company (Northwest Natural Holding Company, "NWNH") to the companies in the Gas Proxy Group: (1) trading volume, (2) share turnover, and (3) the bid-ask spread as a percentage of the stock price.

Northwest Natural Holding Company's trading volume is significantly lower than the Gas Proxy Group companies on average. As Figure 20 below shows, Northwest Natural Holding Company's average daily trading volume has been 23.63 percent of the Gas Proxy Group's trading volume. Lower trading volume indicates lower liquidity, which can be an underlying factor of the size premium.

Figure 20: Market Capitalization and Trading Volume[77]

	Northwest Natural Holding Co.	Gas Proxy Group Average	NWNH % of Proxy Group
Market Capitalization ($ Million)	$1,628	$10,267	15.86%
Average Daily Volume	250,398	1,059,614	23.63%

I also calculated the average daily share turnover of Northwest Natural Holding Company's stock relative to the proxy companies. Share turnover is calculated as the percentage of outstanding shares traded on an average day (i.e., volume traded divided by shares outstanding). Between 2018 and 2025, Northwest Natural Holding Company's average daily share turnover was approximately 0.62 percent, compared to 0.67 percent for the Gas Proxy Group. Between January and June 2025, Northwest

[77] Source: S&P Capital IQ Pro. 30-trading day average ended June 30, 2025.

Natural Holding Company's and the Gas Proxy Group's share turnover was 0.69 percent and 0.76 percent, respectively. Further, over the last six years, Northwest Natural Holding Company had a lower share turnover than the Gas Proxy Group on average in nearly 70 percent of the 1,947 trading days.[78]

Next, I measured the relative difference in the average spread between the bid price and ask price in Northwest Natural Holding Company's stock price relative to the Gas Proxy Group. As Dr. Aswath Damodaran of New York University explains, less liquid assets have higher transaction costs, and the bid-ask spread is one measure of a stock's transaction costs.[79] Dr. Damodaran cites to studies demonstrating the bid-ask spread as a percentage of a stock's price increased as firm size decreased.[80] Similarly, Amihud and Mendelson found that "[a]sset illiquidity is inversely related to the bid-ask spread."[81] In a 1989 study, Amihud and Mendelson concluded that the annual expected return increased by 0.24 percent to 0.26 percent for every one percent increase in the bid-ask spread as a percent of the stock price.[82] Figure 21 below summarizes the average bid-ask spread as a percentage of the average stock price for Northwest Natural Holding Company's and the companies in the Gas Proxy Group.

[78] Source: Bloomberg Professional January 1, 2018 – June 30, 2025.

[80] Aswath Damodaran, "Marketability and Value: Measuring the Illiquidity Discount", Stern School of Business (July 2005), https://people.stern.nyu.edu/adamodar/pdfiles/papers/liquidity.pdf.

[81] Yakov Amihud and Haim Mendelson, *Liquidity*, *Asset Prices and Financial Policy*, Financial Analysts Journal, Vol. 47, No. 6 (Nov-Dec 1991), at 57.

[82] Amihud, Y. and Mendelson, 1989, *The Effects of Beta, Bid-Ask Spread, Residual Risk and Size on Stock Returns*, Journal of Finance, v. 44, 479-486.

Figure 21: Bid-Ask Spread as a Percent of Stock Price[83]

	30-day Average	90-day Average	180-day Average	YTD 2025 Average
Northwest Natural Holding	0.0463%	0.0620%	0.0689%	0.0673%
Proxy Group (Avg)	0.0267%	0.0288%	0.0293%	0.0293%
Difference	1.73x	2.15x	2.35x	2.29x

As Figure 21 shows, the bid-ask spread as a percentage of the stock price for Northwest Natural Holding Company is 1.73x to 2.35x higher than the Gas Proxy Group companies on average. Both the analyses shown in Figure 20 and Figure 21 indicate that Northwest Natural Holding Company is smaller in size and its stock is less liquid than the Gas Proxy Group, for which investors require a higher return as compensation.

Q. Do you propose an explicit risk adjustment to your ROE recommendation of 0.45 percent to reflect NW Natural's small size?

A. No. While I have quantified a 45-basis point premium associated with the Company's small size, I did not explicitly factor it into my ROE recommendation.

D. Business Risk Conclusion

Q. What is your conclusion regarding NW Natural's business risk factors and the implication on your ROE recommendation?

A. NW Natural is significantly smaller in size than the Gas Proxy Group and is more exposed to decarbonization policy risk than the Gas Proxy Group on average. As a smaller company, the potential for these risks to adversely affect the Company's

[83] Sources: S&P Capital IQ, Bloomberg Professional as of June 30, 2025.

financial profile is more acute because they may have a greater impact on revenues and expenses. While I have not made an explicit adjustment for the risk factors, they should be considered when determining the appropriate ROE and capital structure for NW Natural.

VII. CAPITAL STRUCTURE

Q. What common equity ratio is the Company proposing?

A. NW Natural is proposing a capital structure that includes 51.00 percent common equity, 48.00 percent long-term debt and 1.00 percent short-term debt, as discussed in the testimony of Company witness Wilson. The Company's proposed capital structure reflects its projected capital structure in the near term and is needed to strengthen its balance sheet and support its credit rating.

Q. How does the capital structure affect the cost of capital?

A. A company's total risk consists of business risk and financial risk. Business risk includes operating, market, regulatory, and competitive uncertainties, while financial risk is the incremental risk associated with greater debt. As the percentage of debt in the capital structure increases, so do the fixed obligations for the repayment of that debt and the risk of financial distress.[84] Therefore, the capital structure reflects the financial risk that a company may not have adequate cash flows to meet its financial obligations.

[84] *See*, Roger A. Morin, Ph.D., New Regulatory Finance, Public Utility Reports, Inc., at 45-46 (2006).

Q. How does NW Natural's proposed capital structure compare to those of the proxy group companies?

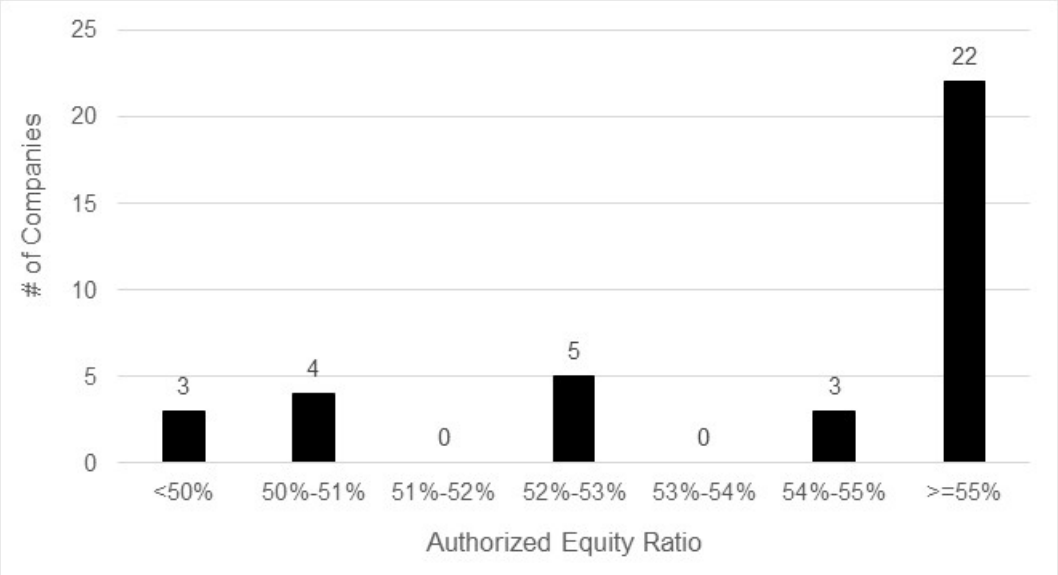
A. The reasonableness of NW Natural's requested capital structure is assessed within the context of industry practice and investor requirements. The capital structure should (1) be reasonably consistent with industry practice, (2) enable the subject company to sustain its operations and its financial integrity, and (3) allow it to maintain access to capital at competitive rates under a variety of market conditions.

As shown in Exh. JEN-11, NW Natural's proposed capital structure is within the range, but somewhat more leveraged (i.e., more debt in relation to equity) than the actual capital structures of the operating utilities contained in the Gas Proxy Group and Combined Proxy Group holding companies. For the three years ending 2024, I calculate the common equity, long-term debt, and short-term debt at the regulated utility operating company level for the Gas Proxy Group. I then "roll up" the individual operating company capital ratios to the holding company level by calculating the weighted average common equity, long-term debt, and short-term debt ratios of the utility operating companies within each proxy company. The Gas Proxy Group has an average and median equity ratio of 53.58 percent and 53.96 percent, respectively, over the last three years. For the Combined Proxy Group, the average and median equity ratio is 51.68 percent and 52.54 percent, respectively, over the last three years. NW Natural's proposed 51 percent common equity ratio is below the average and median for both proxy groups. Although this places equity holders at greater risk relative to the Gas Proxy Group, I have not made an adjustment to my recommended ROE on account of the proposed capital structure.

Q. Have you also reviewed the current authorized equity ratios for the Gas Proxy Group?

A. Yes. As shown in Exh. JEN-12, the current authorized equity ratios for the natural gas operating companies within the Gas Proxy Group range from 43.16 percent to 61.05 percent, with a mean and median of 55.71 percent and 58.00 percent, respectively. NW Natural's requested equity ratio of 51.00 percent is below the mean and median and on the low end of the range of the Gas Proxy Group authorized equity ratios. Notably, as shown in Figure 22 below, 25 of the 37 regulated natural gas operating utilities within the Gas Proxy Group (i.e., 68 percent) currently have an authorized equity ratio of 54.00 percent or higher. NW Natural's requested equity ratio is significantly below the majority of the equity ratios authorized for the Gas Proxy Group companies.

Figure 22: Gas Proxy Group Current Authorized Equity Ratio[85]



[85] Sources: Regulatory Research Associates and proxy company SEC Form 10-Ks (publicly available at https://www.sec.gov/search-filings). See Exh. JEN-12.

Q. Are there other factors that support NW Natural's request for a 51 percent equity ratio?

A. Yes. As Company witness Wilson shows in his Tables 5, 6, 7, and 9 in confidential Exh. BJW-1CT, NW Natural's credit metrics have been at the edge of, or weaker than, the rating agencies downgrade thresholds for its current credit rating. The rating agencies have stated that a rating downgrade could occur if its metrics are below the rating agencies' thresholds for a sustained period. By operating close to its downgrade thresholds, NW Natural risks an adverse event beyond its control jeopardizing its credit rating.

Q. Do customers benefit from a utility that maintains a strong financial profile?

A. Yes, in two important ways. First, both debt and equity investors require higher returns for a riskier utility with a lower credit rating. Because the cost of capital is a cost that customers ultimately bear, customers benefit from a utility that maintains a strong financial profile. Second, a utility with a stronger financial profile will have better access to capital at lower costs than a financially weaker utility. Better access to capital enables NW Natural to invest in its system and provide customers with safe and reliable service in all market environments.

VIII. ECONOMIC AND CAPITAL MARKET CONDITIONS

Q. Do economic conditions influence the required cost of capital, including the ROE?

A. Yes. The required cost of capital, including the ROE, is a function of prevailing and expected economic and capital market conditions. Each of the analytical models used to estimate the required ROE is influenced by current and expected capital market

conditions. Therefore, an evaluation of current and projected market conditions is integral to any ROE recommendation.

Q. What are the key factors affecting the cost of equity for regulated utilities in the current and prospective capital markets?

A. The cost of equity for regulated utilities is affected by several key factors, including: (1) the interest rate environment and central bank monetary policy; (2) inflationary pressure and the longer-term outlook for inflation; and (3) greater market volatility and economic uncertainty associated geopolitical events. As discussed below, although the Federal Reserve reduced the Federal Funds target rate in the Fall of 2024 as inflation stabilized and moved closer to the central bank's two percent target, stubborn inflation and greater market and economic uncertainty have prompted the Federal Reserve to alter its easing of monetary policy. Consequently, interest rates and inflation are expected to remain above the levels experienced prior to the COVID-19 pandemic and long-term yields on Treasury bonds are expected to remain above the prevailing levels at the time of the Company's last general rate case. Further, as discussed later in this section, inflation is expected to remain markedly above levels experienced prior to the COVID-19 pandemic and above the Federal Reserve's two percent target. Lastly, geopolitical events present significant uncertainties with respect to the near-term economic and capital market environment in which NW Natural will be raising external capital.

Q. Please summarize the changes in capital market conditions since early 2020.

A. The COVID-19 pandemic had wide ranging impacts on markets, affecting all market sectors, including utilities. At the start of the pandemic, both the S&P 500 Index and

the utility sector lost more than a third of its value. At the same time, the Chicago Board Options Exchange ("CBOE") Volatility Index ("VIX", a measure of expected market volatility) tripled, from 25.03 on February 24, 2020, to 82.69 on March 16, 2020.[86]

Treasury bond yields declined rapidly as the stock market became extremely volatile and investors sought the relative safety of government bonds, combined with the Federal Reserve's reduction in the Federal Funds rate to a target range of 0 percent to 0.25 percent. Because bond yields and bond prices are inversely related, as demand for safer bonds increases, investors bid up the price of bonds and bid down the yields. Since the decline in bond yields was caused by investors' increased aversion to equity market risk, the cost of equity did not decline commensurately with the decline in bond yields.

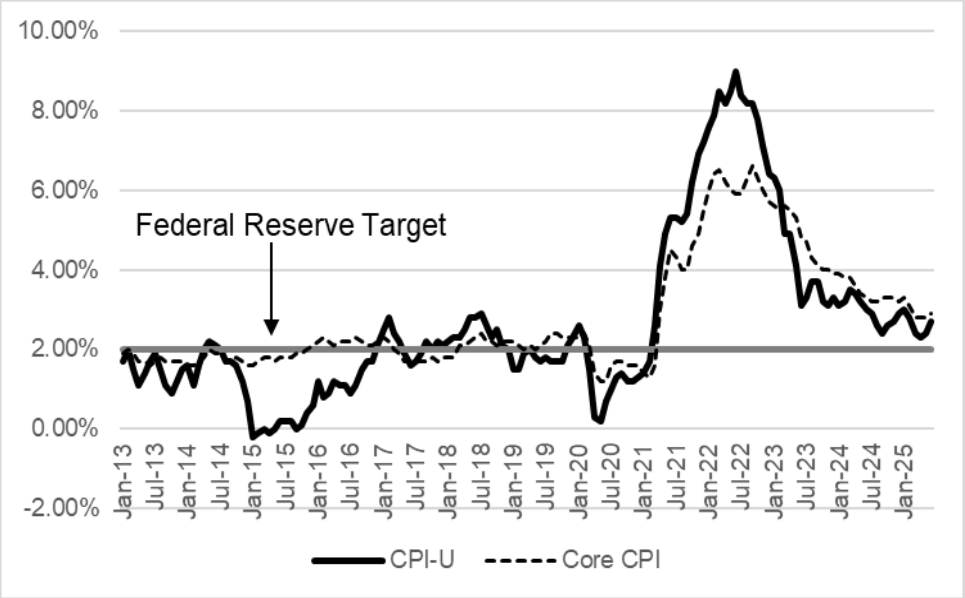
As the U.S. economy opened from the COVID-19 lockdowns, economic activity quickly rebounded, causing inflation to reach the highest levels seen in the last 40 years. In response, the Federal Reserve tightened monetary policy at the fastest pace since the 1980s by increasing the Federal Funds rate by 525 basis points over the course of 11 consecutive Federal Open Market Committee ("FOMC") meetings between March 2022 and July 2023.

As Figure 23 below illustrates, although the pace of inflation subsided from its peak reached in 2022, inflation remains above the Federal Reserve's 2.0 percent target,

[86] Source: Federal Reserve Bank of St. Louis FRED Database.

ticking up to 2.70 percent for all items and 2.90 percent excluding food and energy ("core CPI") as of June 2025.

Figure 23: Year-Over-Year U.S. Consumer Price Index (2013-2025)[87]



As shown in Figure 24, on a cumulative basis, seasonally adjusted inflation has increased 16.3 percent between October 2021 when the Commission's decision in the Company's last rate case was issued and June 2025.

///

///

///

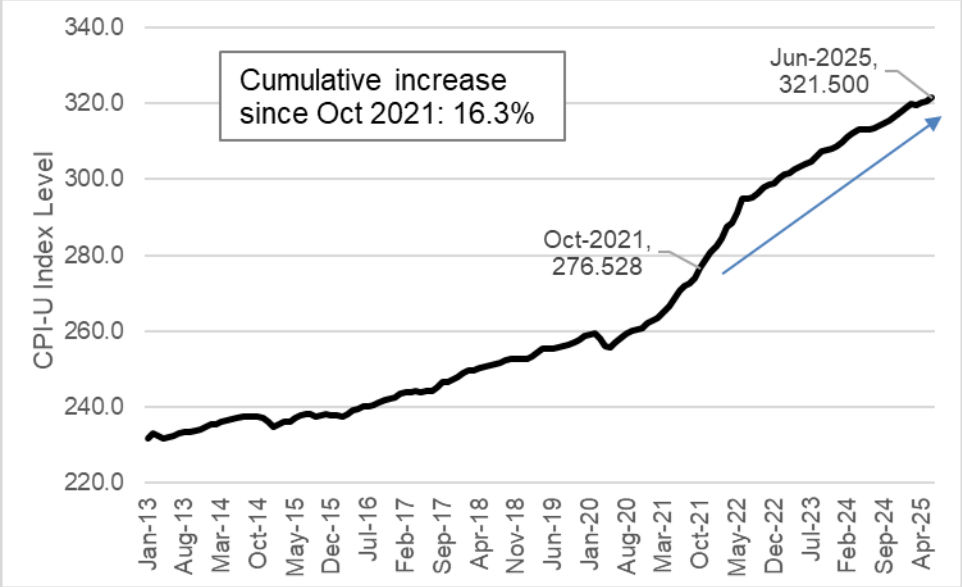
///

///

///

[87] Source: U.S. Bureau of Labor Statistics.

Figure 24: Consumer Price Index Level (2013-2025)[88]



Q. How did government and utility bond yields respond to the Federal Reserve's monetary policy tightening?

A. As the U.S. economy improved in 2021 and the Federal Reserve moved aggressively to tighten monetary policy to fight stubbornly higher inflation, prevailing interest rates rose to their highest levels since 2010.[89] As shown in Figure 25 below, the 30-year Treasury bond yield has increased 278 basis points since November 3, 2021, when the Federal Reserve signaled it would begin tapering its asset purchases, just 13 days after the Commission's October 2021 Order in the Company's last rate case. Utility bond yields have increased by approximately 270 basis points over the same period.

[89] Source: Federal Reserve Bank of St. Louis, FRED Economic Database.

Figure 25: 30-Year Treasury Bond and Utility Bond Yields (2021-2025)[90]

	30-yr Treasury Bond	Moody's A Utility Bond	Moody's Baa Utility Bond
11/3/2021	2.00%	3.02%	3.27%
6/30/2025	4.78%	5.79%	5.97%
Change since 11/3/2021	+2.78%	+2.77%	+2.70%

Consensus forecasts from Blue Chip project long-term government and corporate bond yields to remain at elevated levels over the next six quarters, as shown previously in Figures 2 and 3 in Section II.[91]

Q. Please explain how higher bond yields affect the ROE estimates.

A. The 30-year Treasury bond yield is a direct input to both the CAPM and the Risk Premium models because, as explained earlier, the term of the security aligns with the long life of natural gas utility assets. As yields increase, the cost of capital generally increases, and the ROE estimates from those two models also increase, although not on a one-to-one basis. Further, while interest rates are not a direct input to the DCF model, dividend yields on utility stocks must compete with yields on Treasury bonds. As yields on government bonds increase, utilities must offer a higher dividend yield to attract and retain investors, signaling an increase in the cost of equity for utilities. All else equal, higher dividend yields produce higher ROE estimates in the DCF model.

[90] Source: Federal Reserve Bank of St. Louis, FRED Economic Database; Bloomberg Professional.

[91] Blue Chip Financial Forecasts, Vol. 44, No. 7, July 1, 2025, at 2.

Q. How have economic and financial market conditions changed in recent months?

A. At the end of 2024, financial markets were optimistic that the Federal Reserve was close to attaining a "soft landing" by taming inflation without a consequential rise in unemployment. Over the past few months, however, federal policy uncertainty has climbed sharply, and financial market volatility has increased. Since the announcement of the Administration's tariff policies in early April, data have shown a vulnerable and slowing economy with consumer and business sentiment declining and growing anticipation of higher inflation.[92]

Expectations for inflation are markedly higher than in the five years prior to the pandemic. The University of Michigan's Consumer Sentiment survey reported that U.S. consumer sentiment was 16 percent below December 2024 and well below its historical average, despite improvements in June and July 2025.[93] As noted in the June 2025 special report on inflation expectations:

> After four months of sharp increases to start 2025, long-run expectations fell in May and June. June's median now matches the peak reading from mid-2022, but the three-month-moving average remains above mid-2022. Expectations exhibit substantial uncertainty, particularly in light of ongoing developments and changes with economic policy.[94]

[94] University of Michigan, Surveys of Consumers, *June 2025 Update: Current versus Pre-Pandemic Long-Run Inflation Expectations* (June 27, 2025) https://data.sca.isr.umich.edu/fetchdoc.php?docid=79098.

Q. Please discuss recent changes in U.S. trade policy.

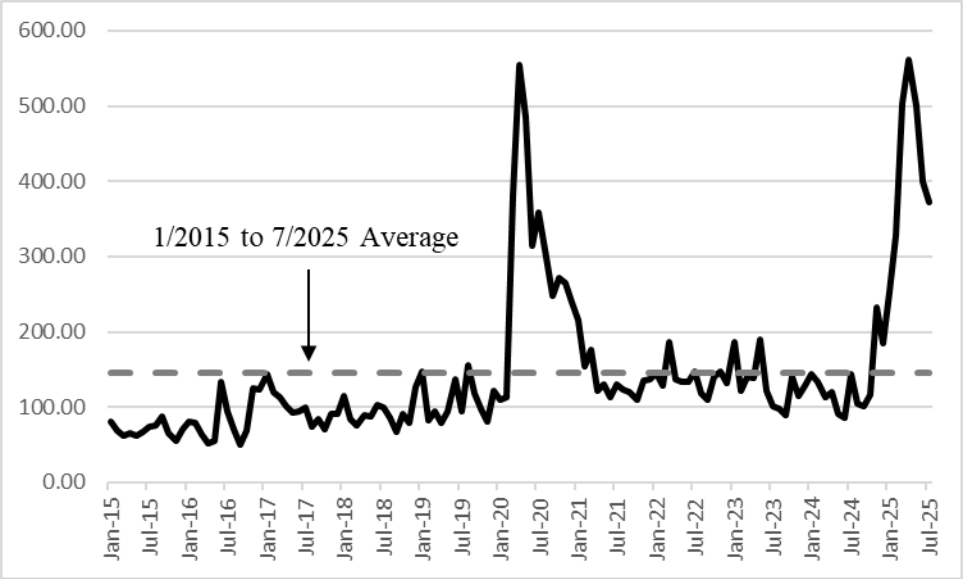
A. During the first half of 2025, the Trump administration had announced, implemented, or delayed implementation of tariffs on numerous U.S. trade partners. A highlight of this is when, on April 2, 2025, President Trump announced the administration would impose a 10 percent base tariff on all imports from nearly every country plus an additional "reciprocal" tariff customized for each of approximately 60 countries.[95] These reciprocal tariffs were subsequently paused, but significant uncertainty remains around the future course of U.S. trade policy and how it will affect the economy.

This created significant policy and market uncertainty; as can be seen in Figure 26 below, the Federal Reserve Bank of St. Louis' Economic Policy Uncertainty Index (the "Index") spiked to levels not seen since the COVID-19 pandemic. While the Index has partially subsided in recent months (to 372.15 as of July 2025), it is still significantly above the average level (145.23) and the level in October 2021 (109.65), when the Commission approved the settlement in NW Natural's last rate case. This indicates that there is still significant uncertainty related to international trade and the economy. Uncertainty increases risk, which increases the cost of equity, all else equal.[96]

[95] https://www.whitehouse.gov/presidential-actions/2025/04/regulating-imports-with-a-reciprocal-tariff-to-rectify-trade-practices-that-contribute-to-large-and-persistent-annual-united-states-goods-trade-deficits/.

[96] https://www.whitehouse.gov/presidential-actions/2025/07/extending-the-modification-of-the-reciprocal-tariff-rates/.

Figure 26: Economic Policy Uncertainty Index January 1, 2015 – July 31, 2025[97]



Q. How might these changes in U.S. trade policy affect inflation and interest rates?

A. Although the effect of these tariffs on the economy is uncertain, economists generally agree that higher tariffs increase inflation by increasing the cost of consumer goods. The tariffs could lead to higher inflation and reduced overall demand, as well as higher interest rates and a stronger dollar.[98] The Budget Lab at Yale University estimates that current tariff proposals would raise consumer prices by 1.8 percent before substitution, which would be the equivalent to $2,400 in in disposable income for the average household.[99] Moody's notes that Asian trading partners were "dealt the

most consequential blow," including the Pacific Coast U.S. states that are more exposed to "severe increases in the cost of both final and intermediate goods."[100]

In a recent article published by S&P Global Market Intelligence, economists noted the "enormous uncertainty" associated with the effect of tariffs on inflation and the economy. The article projected that if President Trump's tariffs are imposed as proposed, they "would cause the core consumer price index[101] to run at a 6% annual pace on average over the next two years."[102]

Higher inflation is complicating the Federal Reserve's unwinding of restrictive monetary policies,[103] bolstering long-term bond yields like the 30-year Treasury yield. The FOMC paused its cuts in the Federal Funds rate at its January 2025 meeting, citing elevated inflation and a stable labor market, and held rates steady since. In an April 16, 2025 speech, Federal Reserve Chair Jerome Powell stated that the Fed faces a "challenging scenario" in balancing the goals of controlling inflation and supporting the labor market, driven primarily by the risk of prolonged inflation and slower economic growth as a result of the tariff policies.[104]

Longer-term bonds like the 30-year Treasury bond are more sensitive to inflation expectations than shorter-term bonds because their value is influenced more by inflation due to their longer maturity holding period and reinvestment rate

[100] Moody's Analytics, "U.S. Regional Economies Brace for Tariff Pain," at 1 (April 4, 2025).

[101] As measured by the Personal Consumption Expenditures ("PCE") price index.

implications. Thus, as the value (price) of bonds declines due to higher inflation expectations, the yield increases. Because utilities are capital intensive enterprises, higher inflation and interest rates tend to have a negative effect on utility stocks. If realized, higher inflation and interest rates would suggest that the cost of capital for utilities may increase in the future.

Q. What conclusions do you draw from your review of the current capital market environment and its implications for NW Natural's cost of equity?

A. Over the last five years, the economic and financial market environment has operated under heightened uncertainty associated with the COVID-19 pandemic, the war in Ukraine, stubborn inflation, and more recently, economic policy uncertainty and geopolitical tensions. Although the Federal Reserve responded to easing inflation by cutting short-term rates in late 2024, it has since paused those cuts to assess how the effects of fluctuating trade policies affect the economy. These factors underscore the importance of using multiple models when determining NW Natural's cost of equity to gain a comprehensive perspective of the effect of fluid and evolving market conditions on the cost of equity.

IX. CONCLUSION

Q. Please summarize your ROE recommendation based on this range of results.

A. Based on my analyses of three widely used analytical approaches applied to a proxy group of six natural gas utilities, I estimate that the Company's cost of equity is within a range of 10.00 percent to 11.00 percent. Within that range, I conclude that an ROE of 10.20 percent is reasonable and conservative. Given the small size of the proxy group of natural gas utilities, I evaluated the reasonableness of my recommendation by

applying the same analytical approaches to an expanded proxy group that added 13 electric utilities with meaningful gas operations to the group of six natural gas utilities. The results of the expanded Combined Proxy Group produced a recommended ROE range of approximately 10.15 percent to 10.91 percent. Therefore, those results reinforce my conclusion that an ROE of 10.20 percent is reasonable and conservative.

Additionally, I consider the Company's business risk profile, including its capital expenditure plan, its exposure to decarbonization policies, and its significantly smaller size relative to the proxy companies. My 10.20 percent ROE recommendation does not include an explicit adjustment for these risks; therefore, my recommendation is conservative.

Q. What is your conclusion regarding the Company's proposed capital structure?

A. I support NW Natural's requested capital structure of 51.00 percent common equity, 48.00 percent long-term debt and 1.00 percent short-term debt as reasonable relative to the range of capital structures for the operating companies held by the two proxy groups.

Q. Does this conclude your Direct Testimony?

A. Yes.

RATE OF RETURN ON EQUITY

Exh. JEN-2

August 29, 2025

JENNIFER E. NELSON
VICE PRESIDENT

Ms. Nelson is a Certified Rate of Return Analyst with more than fifteen years of experience in the energy industry. As an expert witness, she has testified to the cost of capital and alternative ratemaking proposals for electric, natural gas, and water utilities. In her time as a consultant, Ms. Nelson has provided consulting services on a variety of utility regulatory matters including ratemaking and regulatory policy, cost of service and revenue requirements, integrated resource planning, renewable power contracts, natural gas pipeline development, utility supply planning issues, and merger and acquisition transactions. Ms. Nelson has extensive experience performing statistical analyses, developing economic and financial models, and providing policy analyses and recommendations.

Prior to joining Concentric, Ms. Nelson was a Director at ScottMadden, Inc., and a managing consultant at Sussex Economic Advisors, LLC. Prior to consulting, she was a staff economist at the Massachusetts Department of Public Utilities and a petroleum economist for the State of Alaska. Ms. Nelson holds a Master of Science degree in Resource and Applied Economics from the University of Alaska and a Bachelor of Science degree in Business Economics from Bentley University.

AREAS OF EXPERTISE

Cost of Capital

- Submitted expert testimony on behalf of electric utilities before regulatory commissions in Arkansas, Michigan, New Hampshire, New Mexico, North Carolina, South Carolina, Texas and Virginia regarding the cost of capital.
- Submitted expert testimony on behalf of natural gas utilities before regulatory commissions in Alaska, Florida, North Carolina, Ohio, Oregon, South Carolina, Utah, West Virginia, and Wyoming regarding the cost of capital.
- Submitted expert testimony on behalf of a water utility before the Kentucky Public Service Commission regarding the appropriate capital structure and cost of debt.
- Supported expert testimony regarding the cost of capital before numerous state utility regulatory commissions and the FERC on behalf of electric and natural gas utilities through research, financial analysis and modeling, and testimony development.

Alternative Ratemaking Mechanisms

- Submitted expert testimony on behalf of electric utilities and a water utility before the Arkansas Public Service Commission regarding the utilities' proposed Formula Rate Plans.
- Submitted expert testimony on behalf of an electric utility before the Oklahoma Corporation Commission regarding the utility's proposed Formula Rate Plan.
- Submitted expert testimony on behalf of an electric and natural gas utility before the Delaware Public Service Commission regarding the utility's proposed performance-based rate plan.

- Submitted expert testimony on behalf of an electric and natural gas utility before the Montana Public Service Commission regarding the utility's proposed alternative rate mechanisms.
- Co-sponsored expert testimony on behalf of a natural gas utility before the Maine Public Utilities Commission regarding the utility's proposed capital investment cost recovery mechanism.
- Supported expert testimony and performed research and analysis on alternative ratemaking frameworks.

Resource and Supply Planning

- Supported expert testimony on the reasonableness of utility resource supply portfolio decisions.
- Assisted in a benchmarking analysis on behalf of a Northeast U.S. natural gas utility regarding its supply planning standards and design day demand forecast process.
- Supported rebuttal testimony filed on behalf of an Alaska natural gas utility regarding the utility's gas supply planning standards.
- Supported the development of a New Hampshire electric utility's Integrated Resource Plan filed with the New Hampshire Public Utility Commission.
- Performed research and financial analysis to evaluate the benefits, costs, and policy options associated with natural gas expansion by Massachusetts natural gas utilities as part of a prepared report for the Massachusetts Department of Energy Resources.
- Developed a dynamic natural gas demand forecast model for in-state use for the State of Alaska, which included forecasting demand from both existing and anticipated natural gas utilities, power consumption, and large commercial operations.
- Conducted research and prepared analyses for a natural gas pipeline Open Season.

Other Regulatory Financial Issues

- Filed expert testimony before the California PUC regarding the benefits of financial flexibility and diversity in sources of financial capital associated with an electric utility's request to lease entitlements as a means of raising capital.
- Supported expert testimony on the appropriate level of remuneration associated with the Massachusetts electric utilities' long-term contracts for wind power through research, financial analysis and modeling, and testimony development.
- Provided research and analytical support estimating financial damages incurred as a result of construction delays for an electric transmission company.
- Prepared a Feasibility Study for an electric cooperative utility supporting a utility-owned solar project.

Mergers & Acquisitions

- Performed buy-side benchmarking and regulatory analysis for utility acquisitions.

Notes:

A mechanism may cover one or more cost categories; therefore, designations may not indicate separate mechanisms for each category. Columbia Gas of Ohio does not have retail supply obligation.

[1] Full or partial decoupling (such as Straight-Fixed Variable rate design, weather normalization clauses, and recovery of lost revenues as a result of Energy Efficiency programs).

[2] Includes recovery of capital costs including infrastructure replacement programs and capital/plant additions.

[3] Utility-sponsored conservation, energy efficiency, or other demand side management programs.

[4] Pension expenses, bad debt costs, storm costs, environmental costs, regulatory fee, government & franchise fees and taxes, economic development, and low income assistance programs.

Notes:

Sources: Operating Company Annual LDC Reports; S&P Capital IQ. Excludes companies for which no data is reported

[1] Ratios are weighted by actual common equity and total long-term debt of operating subsidiaries.

[2] Spire Mississppi was excluded because it does not report long-term debt

[3] Rockland Electric and Citizens Gas were excluded because they are funded with 100% equity

Source: Regulatory Research Associates; SEC Form 10-K for ATO and SR
If the capital structure was not determined in the most recent rate proceeding, the authorized equity ratio determined in the next most recent proceeding with a determination was used.

Notes:

[1] Gas utilities regulated by the Texas Rail Road Commission (RRC) have a general rate case only if they are unable to reach a settlement with the cities and unincorporated areas ("environs") within their service territories. Current authorized equity ratio for Atmos Texas' territories is published in ATO's 2024 10-K.

[2] Calculated using investor-supplied capital sources only. Columbia Gas of Virginia's authorized capital structure includes 7.316% short-term debt, 47.348% long-term debt, 2.166% preferred stock, 43.147% common equity and 0.023% Job Development Credits.

[3] Calculated using investor-supplied capital sources only. Indiana includes non-investor supplied capital in the ratemaking capital structure reported by RRA. Including non-investor supplied capital, NIPSCO's authorized equity ratio is 52.39%

[4] Source: Spire, Inc. 2024 10-K; authorized in Spire's RSE proceedings, not a general rate case

Northwest Natural Gas Company

Update to credit analysis

Summary

Northwest Natural Gas Company's (NW Natural, Baa1 stable) credit profile reflects the low business risk nature of its business as a local gas distribution company (LDC) operating in generally constructive regulatory environments. In particular, Oregon's suite of cost recovery mechanisms and constructive stakeholder relationships have supported the utility's solid cash flow generation and financial metrics.
